Form 10-Q  
August 14, 2001

---

---

**UNITED STATES  
SECURITIES AND EXCHANGE COMMISSION**  
Washington, D.C. 20549

---

**FORM 10-Q**

ý **QUARTERLY REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES  
EXCHANGE ACT OF 1934**

For the quarterly period ended June 30, 2001

or

o **TRANSITION REPORT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF  
1934**

For the transition period from \_\_\_\_\_ to \_\_\_\_\_

Commission File Number 000-31623

**SIMPLETECH, INC.**

(Exact name of Registrant as specified in its charter)

**CALIFORNIA**

(State or other jurisdiction of incorporation or organization)

**33-0399154**

(I.R.S. EmployerIdentification No.)

**3001 Daimler Street**

**Santa Ana, CA**  
(Address of principal executive offices)

**92705-5812**

(Zip Code)

**(949) 476-1180**

(Registrant's telephone number, including area code)

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes      ý      No

The number of shares outstanding of the Registrant's common stock, par value \$0.001, as of June 30, 2001 was 38,262,961.

SIMLETECH, INC.  
INDEX TO FORM 10-Q FOR THE  
QUARTERLY PERIOD ENDED JUNE 30, 2001

PART I. FINANCIAL INFORMATION

Financial Statements

Item 1.

Consolidated Balance Sheets as of June 30, 2001 (unaudited) and December 31, 2000

Unaudited Consolidated Statements of Operations for the Three and Six Months Ended June 30, 2001 and June 30, 2000

Unaudited Consolidated Statements of Cash Flows for the Six Months Ended June 30, 2001 and June 30, 2000

Notes to Consolidated Financial Statements (unaudited)

Management's Discussion and Analysis of Financial Condition and Results of Operations

Item 2.

Quantitative and Qualitative Disclosure about Market Risk

Item 3.

PART II. OTHER INFORMATION AND SIGNATURES

Legal Proceedings

Item 1.

Changes in Securities and Use of Proceeds

Item 2.

Defaults Upon Senior Securities

Item 3.

Submission of Matters to a Vote of Security Holders

Item 4.

Other Information

Item 5.

Exhibits and Reports on Form 8-K

Item 6.

Signatures

## Edgar Filing: SIMPLETECH INC - Form 10-Q

Except as otherwise noted in this report, SimpleTech, the company, we, us and our collectively refer to SimpleTech, Inc.

**SIMPLETECH, INC**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**  
(Unaudited)

**Note 1 - Basis of Presentation**

The accompanying interim consolidated financial statements are unaudited and have been prepared in accordance with the instructions to Form 10-Q and Article 10 of Regulation S-X. In the opinion of management, all adjustments (consisting of normal and recurring accruals) considered necessary for a fair presentation of the consolidated financial position of the Company at June 30, 2001 and the consolidated results of operations and cash flows for the three and six months ended June 30, 2001 and 2000 have been included. These interim consolidated financial statements should be read in conjunction with the consolidated financial statements and related notes contained in the Annual Report on Form 10-K filed with the SEC. The December 31, 2000 balances reported herein are derived from the audited consolidated financial statements included in the Annual Report on Form 10-K for the fiscal year ended December 31, 2000. The results for the interim periods are not necessarily indicative of results to be expected for the full fiscal year.

The consolidated financial statements of the Company include the accounts of the Company's subsidiaries. All significant intercompany accounts and transactions have been eliminated in consolidation.

**Note 2 - Use of Estimates**

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make certain estimates and assumptions that affect the reported amounts of assets and liabilities (e.g., bad debt reserves and inventory reserves), disclosure of contingent assets and liabilities at the date of the financial statements, and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

**Note 3 - Net Income Per Share**

Basic earnings per share is computed by dividing net income by the weighted average number of shares outstanding. In computing diluted earnings per share, the weighted average number of shares outstanding is adjusted to additionally reflect the effect of potentially dilutive securities. For the quarter ended June 30, 2000, and the six months ended June 30, 2001 and 2000, potentially dilutive securities consisted solely of options and resulted in potential common shares of 2,475,832, 1,409,006 and 2,759,555, respectively. No potential common shares were included in the diluted per share amount for the three months ended June 30, 2001, as the effect would have been anti-dilutive.

For the three and six months ended June 30, 2000, pro forma net income was computed using an effective tax rate of 38% to reflect the estimated income tax expense of the Company as if it had been subject to C corporation federal and state income taxes during the period, instead of S corporation income taxes.

**Note 4 - Supplemental Balance Sheet Information**

Inventory consists of the following:

(In thousands)	June 30, 2001	December 31, 2000
Raw materials	\$ 15,898	\$ 24,768
Work-in-progress	361	759
Finished goods	5,447	9,652
	21,706	35,179
Reserve for excess and obsolescence	(4,425)	(4,127)
Inventory, net	\$ 17,281	\$ 31,052

Furniture, fixtures and equipment consist of the following:

(In thousands)	June 30, 2001	December 31, 2000
Furniture and fixtures	\$ 298	\$ 294
Equipment	18,806	16,769
	19,104	17,063
Accumulated depreciation	(11,596)	(10,137)
Furniture, fixtures and equipment, net	\$ 7,508	\$ 6,926

**Note 5 Dense-Pac Microsystems, Inc. Litigation**

On February 7, 2001, the Court ruled on pending summary judgment motions in the lawsuit the Company filed in September 1998 against Dense-Pac Microsystems, Inc. In this lawsuit filed in Federal Court in Santa Ana, the Company alleged that Dense-Pac infringed the Company's IC Tower stacking patent, U.S. Patent No. 5,514,907. Dense-Pac counterclaimed for infringement of its stacking patent, U.S. Patent No. 4,956,694. The Company sought damages and an injunction against infringement of its patent by Dense-Pac. Dense-Pac denied the infringement and asserted a defense of patent invalidity and a counterclaim against the Company alleging infringement of its stacking patent.

## Edgar Filing: SIMLETECH INC - Form 10-Q

In the Court's summary judgment rulings, the Court found non-infringement by Dense-Pac as to the Company's patent and non-infringement by the Company as to Dense-Pac's patent. The Company has appealed the adverse summary judgment ruling to U.S. Court of Appeals for the Federal Circuit in Washington, D.C. Dense-Pac has not appealed the Court's ruling that the Company did not infringe the Dense-Pac patent, and that ruling is now final.

On February 21, 2001, the Company filed a new lawsuit against Dense-Pac in Federal Court in Santa Ana for infringement of its IC Tower stacking patent, U.S. Patent No. Re. 36,916 (a reissue of U.S. Patent No. 5,514,907 referenced above). The Company is seeking damages, an injunction against further infringement, and related costs. Dense-Pac filed its answer on March 13, 2001, denying infringement, asserting a defense of patent invalidity, and alleging technology misappropriation by the Company. Trial has been set for October 22, 2002.

### Note 6 Segment Information:

The Company designs, manufactures and markets a comprehensive line of memory, storage and connectivity products used in high performance computing, networking and communications, consumer electronics and industrial applications. The Company provides technology solutions for two reportable operating segments, Industrial (formerly termed Original Equipment Manufacturer or OEM) and Commercial (formerly termed Aftermarket), based on DRAM, SRAM and Flash memory technologies.

Beginning in 1999, after completion of management information system enhancements, the Company used net sales and gross profit as the basis for evaluating the performance of its operating segments. The Company does not allocate operating expenses, interest or income taxes to operating segments. Due to the similarity of products manufactured for customers within each operating segment, the Company does not maintain separate records to identify assets by operating segment.

Summarized financial information regarding the Company's reportable segments is shown in the following table:

(in thousands)	Three Months Ended June 30, 2001			Three Months Ended June 30, 2000		
	Industrial	Commercial	Consolidated	Industrial	Commercial	Consolidated
Net revenues	\$ 7,738	\$ 29,030	\$ 36,768	\$ 28,662	\$ 46,150	\$ 74,812
Cost of revenues	5,938	25,211	31,149	20,594	37,630	58,224
Gross profit	\$ 1,800	\$ 3,819	\$ 5,619	\$ 8,068	\$ 8,520	\$ 16,588

  

	Six Months Ended June 30, 2001			Six Months Ended June 30, 2000		
	Industrial	Commercial	Consolidated	Industrial	Commercial	Consolidated
Net revenues	\$ 32,625	\$ 62,858	\$ 95,483	\$ 47,690	\$ 84,957	\$ 132,647
Cost of revenues	21,686	52,716	74,402	34,155	69,082	103,237
Gross profit	\$ 10,939	\$ 10,142	\$ 21,081	\$ 13,535	\$ 15,875	\$ 29,410

For the three and six months ended June 30, 2001 and 2000, international sales comprised 17.2%, 16.2%, 16.4% and 16.0% (unaudited), of the Company's revenues, respectively. During these periods, no single foreign country accounted for more than 10.0% of total revenues. All international sales during these periods were shipped domestically to the Company's foreign customers.

**ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS**

**Cautionary Statement**

Certain statements in this report, including statements regarding the Company's strategy, financial performance and revenue sources, are forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995, Section 21E of the Securities Exchange Act of 1934, as amended, and Section 27A of the Securities Act of 1933, as amended, and are subject to the safe harbors created by those sections. These forward-looking statements are based on our current expectations, estimates and projections about our industry, management's beliefs, and certain assumptions made by us. Such statements are not guarantees of future performance and are subject to certain risks, uncertainties and assumptions that are difficult to predict. Therefore, our actual results could differ materially and adversely from those expressed in any forward-looking statements as a result of various factors. The section entitled "Risk Factors" set forth in this Form 10-Q and similar discussions in filings with the Securities and Exchange Commission made from time to time, including other quarterly reports on Form 10-Q, our Annual Report on Form 10-K, our prospectus on Form S-1 declared effective on September 28, 2000 and in our other SEC filings, discuss some of the important risk factors that may affect our business, results of operations and financial condition.

The following discussion should be read in conjunction with the Company's consolidated financial statements and notes thereto.

**Overview**

Incorporated in 1990, SimpleTech designs, manufactures and markets a comprehensive line of memory, storage and connectivity products used in high performance computing, networking and communications, consumer electronics and industrial applications. Our memory and storage products are based on dynamic random access memory, or DRAM, static random access memory, or SRAM, and Flash memory technologies. In addition, we offer a line of high-density memory products using our three-dimensional IC Tower stacking technology that allows multiple memory chips to be stacked together to increase the capabilities of memory modules without increasing the product footprint.

As a result of increased demand for consumer electronics and high-density memory products used in Internet infrastructure and embedded applications, the percentage of our revenues derived from the sale of Flash memory and IC Tower stacking products increased from 20.8% in 1999 to 40.2% in 2000. For the first six months of 2001, our highest profit margin products were our IC Tower stacking products.

We provide technology solutions for two operating segments, Industrial (formerly termed Original Equipment Manufacturer, or OEM) and commercial (formerly termed Aftermarket). We do not allocate operating expenses, interest or income taxes to operating segments. Due to the similarity of products manufactured for our customers within each operating segment, we do not maintain separate records to identify assets by operating segment.

From 1999 to 2000, combined Industrial and Commercial operating segment revenues grew 60.1% primarily due to increased Flash memory and IC Tower stacking product sales. Industrial customer revenues grew 190.7% from 1999 to 2000 due to strong growth in sales of Flash drives and IC Tower stacking products to Industrial customers in the networking and communication industries. From 1999 to 2000, Commercial revenues increased 14.8% primarily due to expanded sales to retail customers.

Historically, a relatively small number of customers have accounted for a significant percentage of our revenues. Our ten largest customers accounted for an aggregate of 65.6% of our total revenues in the first six months of 2001 and 55.8% of our total revenues in 2000. Our ten largest Industrial customers accounted for an aggregate of 72.6% of our Industrial segment revenues or 24.8% of our total revenues in the first six months of 2001 and 81.3% of our Industrial segment revenues or 37.4% of our total revenues in 2000. Our largest Industrial customer in the first six months of 2001, Unisys, accounted for 34.6% of our Industrial revenues or 11.8% of our total revenues. Our largest Industrial customer in 2000, Cisco Systems, accounted for 31.8% of our Industrial revenues or 14.6% of our total revenues. In early 2001, we experienced numerous order pushouts and cancellations by our Industrial customers in the networking and communications industries due to softening macro-economic conditions, declining semiconductor prices and a build up of customer inventory. Our ten largest Commercial customers accounted for an aggregate of 59.1% of our Commercial revenues or 38.9% of our total revenues in the first six months of 2001 and an aggregate of 50.5% of our Commercial revenues or 27.3% of our total revenues in 2000. Our largest Commercial customer, CDW Computer Centers, accounted for 29.2% of our Commercial revenues or 19.2% of our total revenues in the first six months of 2001 and 31.2% of our Commercial revenues or 16.8% of our total revenues in 2000. Other than Unisys in the first six months of 2001, Cisco Systems in 2000 and CDW Computer Centers, no customer accounted for more than 10.0% of our total revenues in the first six months of 2001 or 2000. The composition of our major customer base changes from quarter to quarter as market conditions fluctuate and we expect this variability will continue in the future. We expect that sales of our products to a small number of customers will continue to contribute materially to our revenues in the foreseeable future and believe that our financial results will depend in significant part upon the success of our customers' businesses.

## Edgar Filing: SIMLETECH INC - Form 10-Q

International sales of our products constituted 16.2% of our revenues for the first six months of 2001 and 13.4% of our revenues in 2000. No single foreign country accounted for more than 10.0% of our revenues in the first six months of 2001 or 2000. During the first six months of 2001 and 2000, over 95.0% of our international sales were denominated in U.S. dollars. Consequently, if the value of the U.S. dollar increases relative to a particular foreign currency, our products could become relatively more expensive, which could result in a reduction of sales in a particular country. In addition, we purchase substantially all of the IC devices used in our products from local distributors of Japanese, Korean and Taiwanese suppliers. Although our purchases of IC devices are currently denominated in U.S. dollars, devaluation of the U.S. dollar relative to the currency of a foreign supplier would likely result in an increase in our cost of IC devices. Our international sales also could be adversely affected by risks including regulatory risks, tariffs and other trade barriers.

In the past we have been impacted by seasonal purchasing patterns resulting in higher sales in the third and fourth quarters of each calendar year. Our ability to adjust our short-term operating expenses in response to fluctuations in revenues is limited. As a result, if revenues are lower than expected in any given period, our results of operations could be harmed.

Substantially all of our revenues are recognized at the time of shipment. A majority of our sales through Commercial channels include limited rights to return unsold inventory. In addition, while we may not be contractually obligated to accept returned products, we may determine that it is in our best interest to accept returns in order to maintain good relations with our customers. Product returns would increase our inventory and reduce our revenues. We have had to write down inventory in the past for reasons such as obsolescence, excess quantities and declines in market value below our costs. These inventory write-downs were approximately \$918,000 in the first six months of 2001 and \$2.9 million in 2000. The majority of our inventory write-downs in 2000 occurred in the fourth quarter due to rapidly declining IC device component prices. In addition, we offer some of our Commercial customers limited price protection rights for inventories of our products held by them. If we reduce the list price of our products, these customers may receive credits from us. We incurred price protection charges of approximately \$931,000 in the first six months of 2001 and \$557,000 in 2000. Price protection charges increased in the first six months of 2001 primarily due to increased component price volatility.

From formation in March 1990 to September 26, 2000, we elected for federal and state income tax purposes to be treated as an S corporation under Subchapter S of the Internal Revenue Code. Under this election, our shareholders, rather than SimpleTech, were subject to federal income taxes on their respective share of our taxable income. We also had elected similar treatment for California franchise tax purposes which, in addition, requires a state income tax at our level of 1.5%. On September 26, 2000, we terminated our Subchapter S election. Subsequent to the termination, we are required to pay federal and state corporate-level income taxes.

### **Results of Operations - Comparison of the second quarter of 2001 to the second quarter of 2000**

*Net Revenues.* Our revenues were \$36.8 million in the second quarter of 2001 compared to \$74.8 million in the same period in 2000. Sales of Flash and IC Tower stacking products accounted for 29.9% of our revenues in the second quarter of 2001, compared to 35.1% in the same period in 2000. Revenue declined primarily due to a unit volume decrease of 10% and a decrease in average sales price from \$108 in the second quarter of 2000 to \$59 in the second quarter of 2001. The decrease in our average sales price resulted from significant declines in DRAM and Flash component prices from late 2000 through the second quarter of 2001. Unit shipments of our standard memory products increased 9.1%, which partially offset decreases of 4.5% for Flash products, 81.0% for IC Tower stacking products and 58.8% for non-DRAM, non-Flash products such as SRAM, hard drive upgrade kits and connectivity products. The decline in product shipments resulted primarily from a build-up of excess inventory by our Industrial customers prior to the second quarter of 2001. The mix of products sold varies from quarter to quarter and may vary in the future, affecting our overall average sales prices and gross margins.

Our Industrial segment revenues declined 73.2% from \$28.7 million in the second quarter of 2000 to \$7.7 million in the second quarter of 2001. The decrease in revenue resulted from a 63.1% reduction in unit volume and a reduction in sales price from \$174 in the second quarter of 2000 to \$128 in the second quarter of 2001. Our Commercial segment revenues declined 37.2% from \$46.2 million in the second quarter of 2000 to \$29.0 million in the second quarter of 2001. Commercial revenues declined due to a decrease in average sales price from \$87 in the second quarter of 2000 to \$52 in the second quarter of 2001, offset by an increase in unit volume of 5.8%. This decrease in average sales price for both our Industrial and Commercial segments resulted from significant declines in DRAM and Flash component prices from late 2000 through the second quarter of 2001.

Our combined backlog was \$7.8 million as of June 30, 2001, consisting of \$6.9 million for the Industrial segment and \$900,000 for the Commercial segment. Our combined backlog was \$22.4 million as of December 31, 2000, consisting of \$21.4 million for the Industrial segment and \$1.0 million for the Commercial segment. The decrease in Industrial segment backlog from December 31, 2000 to June 30, 2001 was primarily due to the push out and cancellation of orders by our Industrial customers in the networking and communication industries as a result of a global economic slowdown and a build-up of their inventory levels. Commercial segment backlog is typically nominal since substantially all commercial customer orders are filled on a same day or next day basis. We include in our backlog only those customer orders for which we have accepted purchase orders and to which we have assigned shipment dates within the upcoming six months. Since orders constituting our backlog are subject to change due to, among other things, customer cancellations and reschedulings, and our ability to procure necessary components, backlog is not necessarily an indication of future revenues.

## Edgar Filing: SIMPLETECH INC - Form 10-Q

*Gross Profit.* Our gross profit was \$5.6 million in the second quarter of 2001, compared to \$16.6 million in the same period in 2000. Gross profit declined due to the overall decrease in revenues and an inventory write-down of approximately \$900,000 during the quarter. Gross profit as a percentage of revenues was 15.2% in the second quarter of 2001, compared to 22.2% in the same period in 2000. Gross profit for our Industrial segment as a percentage of revenues was 23.3% in the second quarter of 2001, compared to 28.2% in the second quarter of 2000. Gross profit as a percentage of revenues for our Commercial segment decreased from 18.5% in the second quarter of 2000 to 13.2% in the second quarter of 2001. The decrease in gross profit as a percentage of revenues resulted primarily from relatively flat fixed production expenses versus reduced revenues and the inventory write-down recorded during the second quarter of 2001.

*Sales and Marketing.* Sales and marketing expenses are primarily comprised of personnel costs and travel expenses for our domestic and international sales and marketing employees, commissions paid to internal salespersons and independent manufacturers' representatives, shipping costs and marketing programs. Sales and marketing expenses were \$4.6 million in the second quarter of 2001, compared to \$5.1 million in the same period in 2000. Sales and marketing expenses decreased over this period primarily due to a decrease in commission expense. Sales and marketing expenses as a percentage of revenues were 12.5% in the second quarter of 2001, compared to 6.8% in the same period in 2000. The increase in sales and marketing expenses as a percentage of revenues resulted primarily from reduced revenues.

*General and Administrative.* General and administrative expenses are primarily comprised of personnel costs for our executive and administrative employees, professional fees and facilities overhead. General and administrative expenses were \$3.4 million in the second quarter of 2001, compared to \$3.5 million in the same period in 2000. General and administrative expenses as a percentage of revenues were 9.2% in the second quarter of 2001, compared to 4.7% in the same period in 2000. The increase in general and administrative expenses as a percentage of revenues resulted primarily from reduced revenues.

*Research and Development.* Research and development expenses are primarily comprised of personnel costs for our engineering and design staff and the cost of prototype supplies. Research and development expenses were \$1.2 million in the second quarter of 2001, compared to \$1.0 million in the same period in 2000. Research and development expenses as a percentage of revenues were 3.3% in the second quarter of 2001, compared to 1.3% in the same period in 2000. The increase in research and development expenses as a percentage of revenues resulted primarily from reduced revenues.

*Interest Expense and Income.* Interest expense is comprised of interest related to our line of credit and equipment financing. Interest expense was \$54,000 in the second quarter of 2001, compared to \$520,000 in the same period in 2000. The decrease in interest expense in the second quarter of 2001 resulted from the pay down of our line of credit to zero in October 2000. The increase in interest income was \$435,000 in the second quarter of 2001, compared to \$0 in the same period in 2000. The increase in interest income resulted from the investment of cash received in October 2000 from our initial public offering.

*Pro Forma Provision for Income Taxes.* From formation in March 1990 to September 26, 2000, we elected for federal and state income tax purposes to be treated as an S corporation under Subchapter S of the Internal Revenue Code. Under this election, our shareholders, rather than SimpleTech, were subject to federal income taxes on their respective share of our taxable income. We also had elected similar treatment for California franchise tax purposes which, in addition, requires a state income tax at our level of 1.5%. On September 26, 2000, we terminated our Subchapter S election. Subsequent to the termination, we are required to pay federal and state corporate-level income taxes.

Net loss was \$1.9 million in the second quarter of 2001. Assuming the termination of our S corporation status, pro forma net income would have been \$4.0 million in the second quarter of 2000.

### **Results of Operations - Comparison of the first six months of 2001 to the first six months of 2000**

*Net Revenues.* Our revenues were \$95.5 million in the first six months of 2001, compared to \$132.6 million in the same period in 2000. Sales of Flash and IC Tower stacking products accounted for 34.7% of our revenues in the first six months of 2001, compared to 33.2% in the same period in 2000. Revenues decreased due to a decline in average sales price from \$108 in the first six months of 2000 to \$74 in the first six months of 2001, which was partially offset by a 4% unit volume increase. The decrease in our average sales price resulted from significant declines in DRAM and Flash component prices from late 2000 through the second quarter of 2001. We experienced unit volume increases of 12.6% for standard memory products and 9.6% for Flash products, partially offset by decreases of 44.6% for IC Tower stacking products and 25.1% for non-DRAM, non-Flash products such as SRAM, hard drive upgrade kits and connectivity products. The mix of products sold varies from period to period and may vary in the future, affecting our overall average sales prices and gross margins.

Our Industrial segment revenues decreased 31.6% from \$47.7 million in the first six months of 2000 to \$32.6 million in the first six months of 2001. Industrial segment unit volume decreased 34.7% during the period, and Industrial segment average sales price increased from \$169 in the first six months of 2000 to \$177 in the first six months of 2001. The decline in product shipments resulted primarily from a build-up of excess inventory by our Industrial customers in the second half of 2000. Our Commercial segment revenues declined 26.0% from \$85.0 million in the first six months of 2000 to \$62.9 million in the first six months of 2001. Commercial revenues declined due to a reduction in

## Edgar Filing: SIMLETECH INC - Form 10-Q

average sales price from \$90 in the first six months of 2000 to \$57 in the first six months of 2001, offset by an increase in unit volume of 16.1%. The decrease in average sales price for our Commercial segment revenues resulted from significant declines in DRAM and Flash component prices from late 2000 through the second quarter of 2001.

*Gross Profit.* Our gross profit was \$21.1 million in the first six months of 2001, compared to \$29.4 million in the same period in 2000. Gross profit as a percentage of revenues was relatively flat at 22.1% for the first six months of 2001, compared to 22.2% in the same period in 2000. Gross profit for our Industrial segment as a percentage of revenues was 33.5% in the first six months of 2001, compared to 28.4% in the same period in 2000. This increase in gross profit resulted from a positive product mix shift. Gross profit as a percentage of revenues for our Commercial segment decreased from 18.7% in the first six months of 2000 to 16.1% in the first six months of 2001. The decrease in gross profit as a percentage of revenues resulted primarily from relatively flat fixed production expenses versus reduced revenues and an inventory write-down of approximately \$900,000 recorded during the period.

*Sales and Marketing.* Sales and marketing expenses are primarily comprised of personnel costs and travel expenses for our domestic and international sales and marketing employees, commissions paid to internal salespersons and independent manufacturers' representatives, shipping costs and marketing programs. Sales and marketing expenses were relatively flat during this period at \$9.9 million in the first six months of 2001, compared to \$9.5 million in the same period in 2000. Sales and marketing expenses as a percentage of revenues were 10.4% in the first six months of 2001, compared to 7.2% in the same period in 2000. The increase in sales and marketing expenses as a percentage of revenues resulted primarily from reduced revenues.

*General and Administrative.* General and administrative expenses are primarily comprised of personnel costs for our executive and administrative employees, professional fees and facilities overhead. General and administrative expenses were relatively flat at \$6.4 million in the first six months of 2001, compared to \$6.3 million in the same period in 2000. General and administrative expenses as a percentage of revenues were 6.7% in the first six months of 2001, compared to 4.8% in the same period in 2000. The increase in general and administrative expenses as a percentage of revenues resulted primarily from reduced revenues.

*Research and Development.* Research and development expenses are primarily comprised of personnel costs for our engineering and design staff and the cost of prototype supplies. Research and development expenses were \$2.3 million in the first six months of 2001, compared to \$1.5 million in the same period in 2000. The increase in research and development expenses resulted from increased personnel costs related to the expansion of our engineering staff. Research and development expenses as a percentage of revenues were 2.4% in the first six months of 2001, compared to 1.1% in the same period in 2000. The increase in research and development expenses as a percentage of revenues resulted from the expansion of our engineering staff and reduced revenues.

*Interest Expense and Income.* Interest expense is comprised of interest related to our line of credit and equipment financing. Interest expense was \$117,000 in the first six months of 2001, compared to \$806,000 in the same period in 2000. The decrease in interest expense in the first six months of 2001 resulted from the pay down of our line of credit to zero in October 2000. Interest income was \$914,000 in the first six months of 2001, compared to \$1,000 in the same period in 2000. The increase in interest income resulted from the investment of cash received in October 2000 from our initial public offering.

*Pro Forma Provision for Income Taxes.* From formation in March 1990 to September 26, 2000, we elected for federal and state income tax purposes to be treated as an S corporation under Subchapter S of the Internal Revenue Code. Under this election, our shareholders, rather than SimpleTech, were subject to federal income taxes on their respective share of our taxable income. We also had elected similar treatment for California franchise tax purposes which, in addition, requires a state income tax at our level of 1.5%. On September 26, 2000, we terminated our Subchapter S election. Subsequent to the termination, we are required to pay federal and state corporate-level income taxes.

Net income was \$2.0 million in the first six months of 2001. Assuming the termination of our S corporation status, pro forma net income would have been \$7.0 million in the first six months of 2000.

### **Liquidity and Capital Resources**

As of June 30, 2001, we had working capital of \$66.0 million including \$41.1 million of cash and cash equivalents. As of December 31, 2000, we had working capital of \$64.3 million including \$33.7 million of cash and cash equivalents. In addition, we had unused availability of \$27.5 million at June 30, 2001 and December 31, 2000 under our line of credit with Comerica Bank. We had no outstanding principal balance under our line of credit at June 30, 2001 and December 31, 2000. There is no unused line fee under our line of credit agreement with Comerica Bank. As a result of our initial public offering on September 29, 2000, Comerica Bank has the option to reduce our available line of credit to a range between \$15.0 million to \$20.0 million as determined in their sole and absolute discretion.

## Edgar Filing: SIMLETECH INC - Form 10-Q

Net cash provided by operating activities was \$9.5 million in the first six months of 2001. Net cash provided by operating activities in the first six months of 2001 resulted primarily from net income of \$2.0 million, a decrease in accounts receivable of \$15.5 million and a decrease in inventory of \$12.9 million, offset by a decrease in accounts payable of \$21.4 million. Accounts receivable, inventory and accounts payable levels decreased due to reduced revenues.

Net cash used in investing activities was \$2.3 million in the first six months of 2001, attributable primarily to purchases of furniture, fixtures and equipment. We expect to spend approximately \$2.0-4.0 million during the next 12 months, primarily for the purchase of manufacturing, testing and engineering equipment.

Net cash provided by financing activities totaled \$75,000 in the first six months of 2001. Net cash provided by financing activities in the first six months of 2001 resulted from the receipt of \$909,000 in proceeds from the exercise of stock options, offset by \$834,000 in payments related to equipment loans and capital lease obligations.

We have several capital leases and loans to finance manufacturing and testing equipment, including leases and loans with companies affiliated with our executive officers and directors as described under "Certain Relationships and Related Transactions-MDC Land Corporation and MDC Land LLC" in our Annual Report on Form 10-K for the fiscal year ended December 31, 2000 filed with the SEC. Our obligations under capital leases were \$900,000 on June 30, 2001 and \$1.4 million on December 31, 2000, with interest rates ranging from 8.1% to 9.6% per annum. Our equipment financing loan balances were \$1.5 million on June 30, 2001 and \$1.8 million on December 31, 2000, with interest rates ranging from 8.4% to 9.1% per annum. One of the equipment note payable agreements contains various nonfinancial covenants that, among other things, limit distributions and dividends to our shareholders without the prior written consent of the lender, and requires the equipment to remain unencumbered by other liens. As of June 30, 2001, we were in compliance with all covenants under the equipment note payable agreements.

We believe that our existing cash, cash equivalents, investments on hand, existing assets, anticipated debt and expected cash flow from operations will be sufficient to fund our operations for the next 12 months. Thereafter, we may require additional sources of funds to continue to support our business. Such funds, if needed, may not be available or may not be available on terms acceptable to us.

### **Risk Factors**

*You should carefully consider the following risks before you decide to buy shares of our common stock. The risks and uncertainties described below are not the only ones facing us. Additional risks and uncertainties, including those risks set forth in Management's Discussion and Analysis of Financial Condition and Results of Operations above, may also adversely impact and impair our business. If any of the following risks actually occur, our business, results of operations or financial condition would likely suffer. In such case, the trading price of our common stock could decline, and you may lose all or part of the money you paid to buy our stock.*

*This Report contains forward-looking statements based on the current expectations, assumptions, estimates and projections about us and our industry. These forward-looking statements involve risks and uncertainties. Our actual results could differ materially from those discussed in these forward-looking statements as a result of certain factors, as more fully described in this section and elsewhere in this Report. We do not undertake to update publicly any forward-looking statements for any reason, even if new information becomes available or other events occur in the future.*

### **Declines in our average sales prices may result in declines in our revenues and gross margins.**

In the past nine months, overcapacity in the memory product market has negatively impacted our average selling prices. We expect this overcapacity to negatively impact our revenues and profitability at a minimum until the end of 2001. Declines in semiconductor prices could affect the valuation of our inventory, which could harm our business. Our ability to maintain or increase revenues will depend upon our ability to increase unit sales volumes of existing products and to introduce and sell new products in quantities sufficient to offset declines in sales prices. Our efforts to reduce costs and develop new products to offset the impact of further declines in average sales prices may not be successful. Declines in average sales prices also would result in more memory being built into products by Industrial customers, which would favor our largest competitors and reduce the demand for our commercial memory products.

### **We are subject to the cyclical nature of the semiconductor industry and changes from the current point in the cycle could adversely affect our business.**

The semiconductor industry, including the memory markets in which we compete, is highly cyclical and is characterized by constant and rapid technological change, rapid product obsolescence and price erosion, evolving standards, short product life cycles and wide fluctuations in product supply and demand. The industry has experienced significant downturns, often connected with, or in anticipation of, maturing product

cycles of both semiconductor companies' and their customers' products and declines in general economic conditions. These downturns have been characterized by diminished product demand, production overcapacity, high inventory levels and accelerated erosion of average selling prices. Any future downturns could have a material adverse effect on our business and operating results. Furthermore, any upturn in the semiconductor industry could result in increased demand for, and possible shortages of, components we use to manufacture and assemble our ICs. Such shortages could have a material adverse effect on our business and operating results.

**Because we depend on a small number of suppliers for IC devices, any disruption in our supply relationships could harm our ability to fulfill orders.**

We have no long-term DRAM supply contracts and are dependent on a small number of suppliers to supply DRAM devices, which represent approximately 95% of the component costs of our DRAM memory products. Our dependence on a small number of suppliers and our lack of long-term supply contracts expose us to several risks, including the inability to obtain an adequate supply of components, price increases, late deliveries and poor component quality. Elpida, Hyundai Electronics, Micron and Samsung Semiconductor currently supply a majority of the dynamic random access memory, or DRAM, IC devices used in our DRAM memory products. A disruption in or termination of our supply relationship with any of these significant suppliers by natural disaster or otherwise, or our inability to develop relationships with new suppliers, if required, would cause delays, disruptions or reductions in product shipments or require product redesigns which could damage relationships with our customers, and would increase our costs and/or prices.

**We may be unable to maintain a steady supply of components.**

The electronics industry has experienced in the past, and may experience in the future, shortages in IC devices, including DRAM, static random access memory, or SRAM, and Flash memory. We have experienced and may continue to experience delays in component deliveries and quality problems which have caused and could in the future cause delays in product shipments and have required and could in the future require the redesign of some of our products. In addition, industry capacity has, from time to time, become constrained such that some vendors which supply components for our products have placed their customers, ourselves included, on allocation. This means that while we may have customer orders, we may not be able to obtain the materials that we need to fill those orders in a timely manner.

**Sales to a small number of customers represent a significant portion of our revenues and the loss of any key customer would materially reduce our sales.**

Our dependence on a small number of customers means that the loss of a major customer or any reduction in orders by a major customer would materially reduce our sales. Historically, a relatively small number of customers have accounted for a significant percentage of our revenues. Our ten largest Industrial segment customers accounted for an aggregate of 75.3% of our Industrial revenues or 15.8% of our total revenues in the second quarter of 2001 and an aggregate of 72.6% of our Industrial revenues or 24.8% of our total revenues in the first six months of 2001. Our largest Industrial customer, Unisys, accounted for 37.8% of our Industrial revenues or 8.0% of our total revenues in the second quarter of 2001 and 34.6% of our Industrial revenues or 11.8% of our total revenues in the first six months of 2001. No other Industrial segment customer accounted for more than 10.0% of our revenues in the second quarter and first six months of 2001. Our ten largest Commercial segment customers accounted for an aggregate of 61.1% of our Commercial revenues or 48.3% of our total revenues in the second quarter of 2001 and an aggregate of 59.1% of our Commercial revenues or 38.9% of our total revenues in the first six months of 2001. Our largest Commercial customer, CDW Computer Centers, accounted for 28.6% of our Commercial revenues or 22.6% of our total revenues in the second quarter of 2001 and 29.2% of our Commercial revenues or 19.2% of our total revenues in the first six months of 2001. No other Commercial segment customer accounted for more than 10.0% of our revenues in the second quarter and first six months of 2001. Consolidation in some of our customers' industries may result in increased customer concentration and the potential loss of customers as a result of acquisitions. In addition, the composition of our major customer base changes from quarter to quarter as the market demand for our customers' products changes and we expect this variability will continue in the future. We expect that sales of our products to a small number of customers will continue to contribute materially to our revenues in the foreseeable future and believe that our financial results will depend in significant part upon the success of our customers' products.

**Three of our beneficial shareholders have substantial influence over our operations and can significantly influence matters requiring shareholder approval.**

Manouch Moshayedi, Mike Moshayedi and Mark Moshayedi, each of whom is an executive officer and director of SimpleTech, are brothers and beneficially own approximately 80.0% of our common stock. As a result, they have the ability to control all matters requiring approval by our shareholders, including the election and removal of directors, approval of significant corporate transactions and the ability to control the decision of whether a change in control will occur.

**We are involved from time to time in claims and litigation over intellectual property rights, which may adversely affect our ability to manufacture and sell our products.**

## Edgar Filing: SIMLETECH INC - Form 10-Q

The semiconductor industry is characterized by vigorous protection and pursuit of intellectual property rights. We believe that it may be necessary, from time to time, to initiate litigation against one or more third parties to preserve our intellectual property rights. In addition, from time to time, we have received, and may continue to receive in the future, notices that claim we have infringed upon, misappropriated or misused other parties' proprietary rights, which claims could result in litigation. Such litigation would likely result in significant expense to us and divert the efforts of our technical and management personnel. In the event of an adverse result in such litigation, we could be required to pay substantial damages, cease the manufacture, use and sale of certain products, expend significant resources to develop non-infringing technology, discontinue the use of certain processes or obtain licenses to use the infringed technology. Such a license may not be available on commercially reasonable terms, if at all. Our failure to obtain a license or our failure to obtain a license on commercially reasonable terms could cause us to incur substantial costs and suspend manufacturing products using the infringed technology. If we obtain a license, we would likely be required to make royalty payments for sales under the license. Such payments would increase our costs of revenues and reduce our gross profit.

We are currently a party to two lawsuits regarding intellectual property as further described below under Part II Other Information Item I - Legal Proceedings. The outcome of litigation is inherently uncertain and we cannot predict the outcome of these lawsuits with certainty. These lawsuits have diverted, and are expected to continue to divert, the efforts and attention of our key management and technical personnel. In addition, we have incurred, and expect to continue to incur, substantial legal fees and expenses in connection with these lawsuits. As a result, our defense of these lawsuits, regardless of their eventual outcomes, has been, and will continue to be, costly and time consuming. In addition, if our IC Tower stacking patent is found to be invalid, our ability to exclude competitors from making, using or selling the same or similar products to our IC Tower stacking products would cease. In addition, if we are found to infringe valid patents of others, we may be excluded from using the infringed technology without a license, which may not be available on commercially reasonable terms, if at all.

### **If industry sales of products using Flash memory do not grow, our revenues, gross margins and profitability would be harmed.**

The market for consumer electronics incorporating Flash memory is relatively new and emerging. The success of our Flash business will depend largely on the level of consumer interest in consumer electronics utilizing Flash memory, such as digital cameras, MP3 digital audio players and personal digital assistants, or PDAs, many of which have only recently been introduced to the market. If sales of products using Flash memory do not increase, we will be unable to grow our Flash business. In addition, if we are unable to anticipate and fulfill customer demand for our products, we may lose sales to our competitors.

### **Demand for our products would decline if the market for Flash memory does not develop, or if a competing technology displaces Flash memory.**

There is currently an absence of a single Flash memory standard. It is possible that Flash memory standards other than those to which our products conform will emerge as the industry standard. If we are unable to anticipate and adequately allocate our resources in a timely and efficient manner toward the production and development of industry-standard Flash memory products, we may experience significant delays in releasing new and commercially viable products. These delays would provide a competitor a first-to-market opportunity and allow a competitor to achieve greater market share. Some of our competitors are in a better financial and marketing position from which to influence industry acceptance of a particular Flash memory standard or competing technology than we are. In particular, a primary source of competition may come from companies that offer alternative technologies such as ferroelectric random access memory products. If a competing technology replaces or takes significant market share from the Flash memory market, we would not be able to sell our Flash products.

### **The execution of our growth strategy depends on our ability to retain key personnel, including our executive officers, and to attract qualified personnel.**

Competition for employees in our industry is intense. We have had and may continue to have difficulty hiring the necessary engineering, sales and marketing and management personnel to support our growth. The successful implementation of our business model and growth strategy depends on the continued contributions of our senior management and other key research and development, sales and marketing and operations personnel, including Manouch Moshayedi, our Chief Executive Officer, Mike Moshayedi, our President, and Mark Moshayedi, our Chief Operating Officer, Chief Technical Officer and Secretary. The loss of any key employee, the failure of any key employee to perform in his or her current position, or the inability of our officers and key employees to expand, train and manage our employee base would prevent us from executing our growth strategy.

### **Our proprietary technology and intellectual property may not be adequately protected, which could harm our competitive position.**

Our proprietary technology and other intellectual property are critical to our success. We protect our intellectual property rights through patents, trademarks, copyrights and trade secret laws, confidentiality procedures and employee disclosure and invention assignment agreements. It is possible that our efforts to protect our intellectual property rights may not:

## Edgar Filing: SIMLETECH INC - Form 10-Q

prevent the challenge, invalidation or circumvention of our existing patents;

result in patents that lead to commercially viable products or provide competitive advantages for our products;

prevent our competitors from independently developing similar products, duplicating our products or designing around the patents owned by us;

prevent third-party patents from having an adverse effect on our ability to do business;

result in patents with claims that are sufficiently broad to preclude competition;

provide adequate protection for our intellectual property rights;

prevent disputes with third parties regarding ownership of our intellectual property rights;

prevent disclosure of our trade secrets and know-how to third parties or into the public domain; and

result in patents from any of our pending applications.

As part of our confidentiality procedures, we enter into non-disclosure and invention assignment agreements with all of our employees and attempt to control access to and distribution of our technology, documentation and other proprietary information. However, if such agreements are found to be unenforceable, we may be unable to adequately protect our intellectual property rights. In addition, despite these procedures, third parties could copy or otherwise obtain and make unauthorized use of our technologies or independently develop similar technologies.

We have not applied and do not expect to apply for patent protection in foreign countries. In addition, the laws of foreign countries may not adequately protect our intellectual property rights. Many U.S. companies have encountered substantial infringement problems in some foreign countries. Because we sell some of our products overseas, we have exposure to foreign intellectual property risks.

### **Our indemnification obligations for the infringement by our products of the intellectual property rights of others could require us to pay substantial damages.**

We currently have in effect a number of agreements in which we have agreed to defend, indemnify and hold harmless certain of our customers and suppliers from damages and costs which may arise from the infringement by our products of third-party patents, trademarks or other proprietary rights. We may periodically have to respond to claims and litigate these types of indemnification obligations. Any such indemnification claims could require us to pay substantial damages. Our insurance does not cover intellectual property infringement.

### **Our indemnification obligations to our customers and suppliers for product defects could require us to pay substantial damages.**

A number of our product sales and product purchase agreements provide that we will defend, indemnify and hold harmless our customers and suppliers from damages and costs which may arise from product warranty claims or claims for injury or damage resulting from defects in our products. We maintain insurance to protect against certain claims associated with the use of our products, but our insurance coverage may not be adequate to cover all or any part of the claims asserted against us. A successful claim brought against us that is in excess of, or excluded from, our insurance coverage could substantially harm our business, financial condition and results of operations.

### **Our limited experience in acquiring other businesses, product lines and technologies may make it difficult for us to overcome problems encountered in connection with any acquisitions we may undertake.**

We intend to pursue selective acquisitions to complement our internal growth. If we make any future acquisitions, we could issue stock that would dilute our shareholders' percentage ownership, incur substantial debt or assume contingent liabilities. We have limited experience in acquiring other businesses, product lines and technologies. In addition, the attention of our small management team may be diverted from our core business if we undertake an acquisition. Potential acquisitions also involve numerous risks, including, among others:

Problems assimilating the purchased operations, technologies or products;

Costs associated with the acquisition;

Adverse effects on existing business relationships with suppliers and customers;

Risks associated with entering markets in which we have no or limited prior experience;

Potential loss of key employees of purchased organizations; and

Potential litigation arising from the acquired company's operations before the acquisition.

Our inability to overcome problems encountered in connection with such acquisitions could divert the attention of management, utilize scarce corporate resources and harm our business. In addition, we are unable to predict whether or when any prospective acquisition candidate will become available or the likelihood that any acquisition will be completed.

**Product returns, price protection and order cancellations could reduce our revenues.**

To the extent we manufacture products in anticipation of future demand that does not materialize, or in the event a customer cancels outstanding orders, we could experience an unanticipated increase in our inventory. A lack of consumer demand for our products may also cause increased product returns. A majority of our sales through Commercial segment channels include limited rights to return unsold inventory. In addition, while we may not be contractually obligated to accept returned products, we may determine that it is in our best interest to accept returns in order to maintain good relations with our customers. Product returns would increase our inventory and reduce our revenues. We have had to write-down inventory in the past for reasons such as obsolescence, excess quantities and declines in market value below our costs. The inventory write-down for the first six months of 2001 was \$918,000. In addition, we offer some of our Commercial customers limited price protection rights for inventories of our products held by them. If we reduce the list price of our products, these customers may receive credits from us. We incurred price protection charges of approximately \$931,000 in the first six months of 2001.

We are also subject to repurchase agreements with various financial institutions in connection with wholesale inventory financing. Under these agreements, we may be required to repurchase inventory upon customer default with a financing institution and then resell the inventory through normal distribution channels. As of June 30, 2001, we have not been required to repurchase inventory in connection with the customer default agreements noted above. However, it may be possible that we will be required to repurchase inventory, upon customer default, in the future. Sales under such agreements were approximately \$792,000 in the first six months of 2001.

We have no long-term volume commitments from our customers. Sales of our products are made through individual purchase orders and, in certain cases, are made under master agreements governing the terms and conditions of the relationships. Customers may change, cancel or delay orders with limited or no penalties. We have experienced cancellations of orders and fluctuations in order levels from period-to-period and we expect to continue to experience similar cancellations and fluctuations in the future which could result in fluctuations in our revenues.

**We may not be able to maintain or improve our competitive position because of the intense competition in the memory industry.**

We conduct business in an industry characterized by intense competition, rapid technological change, evolving industry standards, declining average sales prices and rapid product obsolescence. Our competitors include many large domestic and international companies that have substantially greater financial, technical, marketing, distribution and other resources, broader product lines, lower cost structures, greater brand recognition and longer-standing relationships with customers and suppliers. As a result, our competitors may be able to respond better to new or emerging technologies or standards and to changes in customer requirements. Our competitors may also be able to devote greater resources to the development, promotion and sale of products, and may be able to deliver competitive products at a lower price.

We expect to face competition from existing competitors and new and emerging companies that may enter our existing or future markets that have similar or alternative products which may be less costly or provide additional features. In addition, some of our significant suppliers are also our competitors, many of whom have the ability to manufacture competitive products at lower costs as a result of their higher levels of integration. We also face competition from current and prospective customers that evaluate our capabilities against the merits of manufacturing products internally. Competition may arise due to the development of cooperative relationships among our current and potential competitors or third parties to increase the ability of their products to address the needs of our prospective customers. Accordingly, it is possible that new competitors or alliances among competitors may emerge and rapidly acquire significant market share.

We expect our competitors will continue to improve the performance of their current products, reduce their prices and introduce new products that may offer greater performance and improved pricing, any of which could cause a decline in sales or loss of market acceptance of our products. In addition, our competitors may develop enhancements to or future generations of competitive products that may render our technology or products obsolete or uncompetitive.

**We may lose our competitive position if we fail to develop new and enhanced products and introduce them in a timely manner.**

The high performance computing, networking and communications, consumer electronics and industrial markets are subject to rapid technological change, product obsolescence, frequent new product introductions and enhancements, changes in end-user requirements and evolving industry standards. Our ability to compete in these markets will depend in significant part upon our ability to successfully develop, introduce and sell new and enhanced products on a timely and cost-effective basis, and to respond to changing customer requirements.

We have experienced, and may in the future experience, delays in the development and introduction of new products. Our product development is inherently risky because it is difficult to foresee developments in technology, coordinate our technical personnel, and identify and eliminate design flaws. Defects or errors found in our products after commencement of commercial shipments, could result in delays in market acceptance of these products. Delays in developing, manufacturing or marketing new or enhanced products could give our competitors an advantage, hurt our reputation and harm our business, financial condition and results of operations. Such products, even if introduced, may not gain market acceptance. In addition, we may not be able to respond effectively to new technological changes or new product announcements by others.

**We rely on a continuous power supply to conduct our operations, and California's current energy crisis could disrupt our operations and increase our expenses.**

All of our manufacturing operations are located in our facility in Santa Ana, California. California is in the midst of an energy crisis that could disrupt our operations and increase our expenses. In the event power reserves for the State of California fall to a critically low level, California has on some occasions implemented, and may in the future continue to implement, rolling power blackouts throughout California. We currently do not have backup generators or alternate sources of power in the event of a blackout, and our current insurance does not provide coverage for any damages we may suffer as a result of any interruption in our power supply. If blackouts interrupt our power supply, we would be temporarily unable to continue operations. Any such interruption in our ability to continue operations would delay the manufacture and development of our products, disrupt communications with our customers and suppliers and delay product shipment. Power interruptions could also damage our reputation and could result in lost revenue. Any loss of power could have a material adverse effect on our business, operating results and financial condition. Furthermore, shortages in wholesale electricity supplies have caused power prices to increase. If electricity prices continue to increase, our operating expenses will likely increase which will have a negative effect on our operating results.

**Obtaining additional capital to fund our operations and finance our growth could impair the value of your investment.**

If we expand more rapidly than currently anticipated or if our working capital needs exceed our current expectations, we may need to raise additional capital through public or private equity offerings or debt financings. Our future capital requirements depend on many factors including our research, development, sales and marketing activities. We do not know whether additional financing will be available when needed, or will be available on terms favorable to us. If we cannot raise needed funds on acceptable terms, we may not be able to develop or enhance our products, take advantage of future opportunities or respond to competitive pressures or unanticipated requirements. To the extent we raise additional capital by issuing equity securities, our shareholders may experience substantial dilution and the new equity securities may have greater rights, preferences or privileges than our existing common stock.

**We face risks associated with doing business in foreign countries, including foreign currency fluctuations and trade barriers, that could lead to a decrease in demand for our products or an increase in the cost of the components used in our products.**

The volatility of general economic conditions and fluctuations in currency exchange rates affect the prices of our products and the prices of the components used in our products. International sales of our products accounted for 17.2% in the second quarter of 2001 and 16.2% in the first six months of 2001. No single foreign country accounted for more than 10.0% of our revenues in the second quarter or first six months of 2001. For the second quarter and first six months of 2001, over 95.0% of our international sales were denominated in U.S. dollars. However, if there is a significant devaluation of the currency in a specific country, the prices of our products will increase relative to that country's currency and our products maybe less competitive in that country. In addition, we cannot be sure that our international customers will continue to be willing to place orders denominated in U.S. dollars. If they do not, our revenues and results of operations will be subject to foreign exchange fluctuations which could harm our business. We do not hedge against foreign currency exchange rate risks.

In addition, we purchase substantially all of the IC devices used in our products from local distributors of foreign suppliers. Although our purchases of IC devices are currently denominated in U.S. dollars, devaluation of the U.S. dollar relative to the currency of a foreign supplier would likely result in an increase in our cost of IC devices.

Our international sales also are subject to certain other risks, including regulatory risks, tariffs and other trade barriers, timing and availability of export licenses, political and economic instability, difficulties in accounts receivable collections, difficulties in managing distributors, lack of a local sales presence, difficulties in obtaining governmental approvals, compliance with a wide variety of complex foreign laws and treaties and potentially adverse tax consequences. In addition, the United States or foreign countries may implement quotas, duties, taxes or other charges or restrictions upon the importation or exportation of our products, leading to a reduction in sales and profitability in that

country.

**Disruption of our operations in our Santa Ana, California manufacturing facility would substantially harm our business.**

All of our manufacturing operations are located in our facility in Santa Ana, California. Due to this geographic concentration, a disruption of our manufacturing operations, resulting from sustained process abnormalities, human error, government intervention or natural disasters such as earthquakes, fires or floods could cause us to cease or limit our manufacturing operations and consequently harm our business, financial condition and results of operations.

**Compliance with environmental laws and regulations could harm operating results.**

We are subject to a variety of environmental laws and regulations governing, among other things, air emissions, waste water discharge, waste storage, treatment and disposal, and remediation of releases of hazardous materials. Our failure to comply with present and future requirements could harm our ability to continue manufacturing our products. Such requirements could require us to acquire costly equipment or to incur other significant expenses to comply with environmental regulations. The imposition of additional or more stringent environmental requirements, the results of future testing at our facilities, or a determination that we are potentially responsible for remediation at other sites where problems are not presently known to us, could result in expenses in excess of amounts currently estimated to be required for such matters.

**ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK**

We are currently exposed to interest rate risk on our existing equipment term loans. Our variable rate debt consists of term loan borrowing of \$1.5 million. To date we have not utilized our floating rate debt under the revolving credit facility.

If interest rates were to increase or decrease 1%, the result would be an annual increase or decrease of interest expense of approximately \$15,000. However, due to the uncertainty of the actions that would be taken and their possible effects, this analysis assumes no such action. Further, this analysis does not consider the effect of the change in the level of overall economic activity that could exist in such an environment.

Sales to foreign customers are denominated in U.S. dollars and as such we have no foreign currency fluctuation risk.

**PART II**

**OTHER INFORMATION**

**Item 1. Legal Proceedings**

Reference is made to our Annual Report on Form 10-K for the fiscal year ended December 31, 2000 filed with the SEC under the heading "Legal Proceedings" for a discussion of litigation involving the Company relating to patent litigation with Dense-Pac Microsystems, Inc.

**Dense-Pac Microsystems, Inc. Patent Litigation**

On February 7, 2001, the Court ruled on pending summary judgment motions in the lawsuit the Company filed in September 1998 against Dense-Pac Microsystems, Inc. In this lawsuit filed in Federal Court in Santa Ana, SimpleTech alleged that Dense-Pac infringed SimpleTech's IC Tower stacking patent, U.S. Patent No. 5,514,907. Dense-Pac counterclaimed for infringement of its stacking patent, U.S. Patent No. 4,956,694. SimpleTech sought damages and an injunction against infringement of its patent by Dense-Pac. Dense-Pac denied the infringement and asserted a defense of patent invalidity and a counterclaim against SimpleTech alleging infringement of its stacking patent.

In the Court's summary judgement rulings, the Court found non-infringement by Dense-Pac as to SimpleTech's patent and non-infringement by SimpleTech as to Dense-Pac's patent. Simple Tech has appealed the adverse summary judgement ruling to the U.S. Court of Appeals for the Federal Circuit in Washington, D.C. Dense-Pac has not appealed the Court's ruling that SimpleTech did not infringe the Dense-Pac patent, and that ruling is now final.

On February 21, 2001, SimpleTech filed a new lawsuit against Dense-Pac in Federal Court in Santa Ana for infringement of its IC Tower stacking patent, U.S. Patent No. Re. 36,916 (a reissue of U.S. Patent No. 5,514,907 referenced above). SimpleTech is seeking damages, an injunction against further infringement, and related costs. Dense-Pac filed its answer on March 13, 2001, denying infringement, asserting a defense of patent invalidity, and alleging technology misappropriation by SimpleTech. Trial has been set for October 22, 2002.

**Item 2. Changes in Securities and Use of Proceeds**

None.

**Item 3. Defaults Upon Senior Securities**

None.

**Item 4. Submission of Matters to a Vote of Security Holders**

In April 2001, holders of the requisite majority of the then outstanding shares of Common Stock of the Company approved a resolution by written consent to amend the Company's Amended and Restated Articles of Incorporation to change its name from Simple Technology, Inc. to SimpleTech, Inc.

SimpleTech held its Annual Meeting of shareholder for 2001 as further discussed below:

- (a) SimpleTech's Annual Meeting of Shareholders was held on June 26, 2001 in Irvine, California.
- (b) Proxies for the Annual Meeting were solicited pursuant to Regulation 14 under the Securities Exchange Act of 1934, as amended, there was no solicitation in opposition to the management's nominees as listed in the proxy statement, and all of such nominees were elected.
- (c) At the Annual Meeting, Simple Tech's stockholders elected Manouch Moshayedi, Mike Moshayedi, Mark Moshayedi, Dan Moses, Mark R. Hollinger, F. Michael Ball and Thomas A. Beaver as directors, and ratified the appointment of PricewaterhouseCoopers LLP as independent accounts of the Company for the fiscal year ending December 31, 2001. Set forth below are the number of votes cast for, against or withheld, as well as the number of abstentions as to each matter (there were no broker non-votes).

1. Election of Directors:

Nominee	For	Against	Withheld
Manouch Moshayedi	37,705,106	0	554,934
Mike Moshayedi	37,705,106	0	554,934
Mark Moshayedi	37,705,106	0	554,934
Dan Moses	37,705,106	0	554,934
Mark R. Hollinger	37,705,106	0	554,934
F. Michael Ball	37,705,106	0	554,934
Thomas A. Beaver	37,705,106	0	554,934

2. Ratification of appointment of PricewaterhouseCoopers LLP as the Company's independent accountants for the fiscal year ending December 31, 2001:

For:	37,705,106
Against:	0
Abstain:	554,934

- (d) Not applicable.

**Item 5. Other Information**

None.

**Item 6. Exhibits and Reports on Form 8-K**

None.

**SIGNATURES**

Pursuant to the requirements of the Securities Exchange Act of 1934, the Registrant has duly caused this report to be signed on its behalf by the undersigned thereunto duly authorized.
