2	SEMI-ANNUAL REPORT	FEBRUARY 28, 2010

Dear Shareholder

The past year marked a pivotal turning point for global markets as the Great Recession that started in December 2007 began to recede and give way to recovery. The dramatic about-face could be attributed to a confluence of factors, most notably the extraordinary policy actions of global governments and central banks, a resurgence in corporate profits and growing signs of stability and healing in world economies.

After reaching a trough in early March 2009, stocks galloped higher as investors were lured back into the markets by depressed valuations, desire for higher yields and increasing confidence that all-out financial disaster had been averted. The result was a powerful upswing in global equities and other higher-risk assets through the end of 2009. More recently, the combination of mixed economic data, lingering deflation issues (especially in Europe) and proposed fees and levies on banks dampened investor conviction, resulting in a several-week bout of profit-taking. The selloff had a more pronounced negative effect on international and emerging market equities due primarily to concerns of higher interest rates in Asia and negative headlines out of Europe, particularly in Greece.

Generally speaking, investors—renewed affinity for risk was notable in the fixed income markets as well, where non-Treasury assets made a robust recovery. One of the major themes in 2009 was the reversal of the flight-to-quality trade. High yield, one of the most battered areas during the financial crisis, emerged as the strongest-performing fixed income sector in both the taxable and tax-exempt space. Despite weak fundamentals, the municipal market produced solid returns as technical conditions remained supportive of the asset class. Municipal bond mutual funds enjoyed strong inflows and tax-exempt issuance remained low thanks to the ever-increasing popularity of the Build America Bond program. Nevertheless, state and local fiscal woes and bankruptcy fears remain firmly in the spotlight, and bear close monitoring.

At the same time, yields on money market securities declined throughout the reporting period and remain near all-time lows, with the Federal Open Market Committee reiterating that economic circumstances are likely to necessitate an accommodative interest rate stance for an extended period. Investor assets in money market funds declined from the peak registered in early 2009, but remain above levels registered prior to the financial crisis that began in 2007.

Against this backdrop, the major market averages posted the following returns:

Total Returns as of February 28, 2010	6-month	12-month
US equities (S&P 500 Index)	9.32%	53.62%
Small cap US equities (Russell 2000 Index)	10.59	63.95

BlackRock Core Bond Trust

Investment Objective

BlackRock Core Bond Trust (BHK) (the Trust) seeks to provide high current income with the potential for capital appreciation.

No assurance can be given that the Trust s investment objective will be achieved.

Performance

For the six months ended February 28, 2010, the Trust returned 6.72% based on market price and 8.73% based on net asset value (NAV). For the same period, the closed-end Lipper Corporate Debt Funds BBB-Rated category posted an average return of 9.51% on a market price basis and 8.82% on a NAV basis. All returns reflect reinvestment of dividends. The Trust s discount to NAV, which widened during the period, accounts for the difference between performance based on price and performance based on NAV. The Trust s longer duration relative to its peers detracted from performance as rates rose during the period. On the positive side, the Trust benefited from its overweight in high yield corporates, which outperformed investment-grade credit as risk assets rebounded sharply over the six months. An out-of-index allocation to securitized sectors, including commercial mortgage-backed securities, non-agency mortgage-backed securities (MBS), asset-backed securities and agency MBS, aided performance as well.

Investment Objective

BlackRock Corporate High Yield Fund V, Inc. (HYV) (the Trust) seeks to provide shareholders with current income by investing primarily in a diversified portfolio of fixed income securities that are rated in the lower rating categories of the established rating services (Ba or lower by Moody s or BB or lower by S&P s) or are unrated securities of comparable quality.

No assurance can be given that the Trust s investment objective will be achieved.

Performance

For the six months ended February 28, 2010, the Trust returned 21.19% based on market price and 21.73% based on NAV. For the same period, the closed-end Lipper High Current Yield Funds (Leveraged) category posted an average return of 21.84% on a market price basis and 18.08% on a NAV basis. All returns reflect reinvestment of dividends. The Trust s discount to NAV, which widened during the period, accounts for the difference between performance based on price and performance based on NAV. During the period, we found particularly good value in the automotive segment, which represented the Trust s largest sector overweight. As a group, automotive holdings performed quite well and, thus, were key contributors to performance. In addition, investments in select special situations or distressed credits (including several in the automotive sector) enhanced results. On a credit basis, the Trust s underweight position in BB credits and overweight in the lower-quality ratings and nonrated credits were additive. On the other hand, the Trust maintained relatively low levels of leverage (at period end, 23% of the Trust s total managed assets), which detracted from performance versus the Lipper competitors, who maintained leverage closer to the 33 % regulatory limit. The Trust also held a roughly 14% position in floating rate loan interests. On balance, the position hindered performance as the sector underperformed high yield during the period, but security selection was favorable.

The views expressed reflect the opinions of BlackRock as of the date of this report and are subject to change based on changes in market, economic or other conditions. These views are not intended to be a forecast of future events and are no guarantee of future results.

Investment Objective

BlackRock High Yield Trust (BHY) (the Trust) seeks to provide high current income and to a lesser extent capital appreciation, by investing in a diversified portfolio of below investment grade securities.

Performance

For the six months ended February 28, 2010, the Trust returned 11.31% based on market price and 18.78% based on NAV. For the same period, the closed-end Lipper High Current Yield Funds (Leveraged) category posted an average return of 21.84% on a market price basis and 18.08% on a NAV basis. During the period, we found particularly good value in the automotive segment, which represented the Trust s largest sector overweight. As a group, automotive holdings performed quite well and, thus, were key contributors to performance. In addition, investments in select special situations or distressed credits (including several in the automotive sector) enhanced results. On a credit basis, the Trust s underweight position in BB credits and overweight in the lower-quality ratings and nonrated credits were additive. On the other hand, the Trust maintained leverage in the mid- to high-teen range (at period end, 18% of the Trust s total managed assets), which detracted from performance versus the Lipper competitors, who maintained leverage closer to the 33 % regulatory limit. The Trust also held a roughly 12% position in floating rate loan interests. On balance, the position hindered performance as the sector underperformed high yield during the period, but security selection was favorable. The Trust s cash position was about 6% at period end. Cash positions negatively affected the Trust during a period of high returns for the high yield market.

8	SEMI-ANNUAL REPORT	FEBRUARY 28, 2010

BlackRock Income Opportunity Trust, Inc.

Investment Objective

BlackRock Income Opportunity Trust, Inc. (BNA) (the Trust) seeks to provide current income and capital appreciation in a portfolio of primarily U.S. dollar-denominated securities.

No assurance can be given that the Trust s investment objective will be achieved.

Performance

For the six months ended February 28, 2010, the Trust returned 4.61% based on market price and 6.52% based on NAV. For the same period, the closed-end Lipper Corporate Debt Funds BBB-Rated category posted an average return of 9.51% on a market price basis and 8.82% on a NAV basis. All returns reflect reinvestment of dividends. The Trust s discount to NAV, which widened during the period, accounts for the difference between performance based on price and performance based on NAV. The Trust s underweight in high yield corporates hindered performance during the period, as these securities outperformed investment-grade credit amid a sharp rebound in risk assets. The Trust s longer duration relative to its peers also detracted from results as rates rose. On the positive side, the Trust benefited from an out-of-index allocation to securitized sectors, including commercial mortgage-backed securities, non-agency MBS, asset-backed securities and agency MBS. In addition, the Trust benefited from its curve positioning as the curve steepened over the six months.

The views expressed reflect the opinions of BlackRock as of the date of this report and are subject to change based on changes in market, economic or other conditions. These views are not intended to be a forecast of future events and are no guarantee of future results.

SEMI-ANNUAL REPORT FEBRUARY 28, 2010

BlackRock Income Trust, Inc.

Investment Objective

BlackRock Income Trust, Inc. (BKT) (the Trust) seeks to provide high monthly income while preserving capital by investing in a portfolio of mortgage-backed securities.

No assurance can be given that the Trust s investment objective will be achieved.

Performance

For the six months ended February 28, 2010, the Trust returned 2.26% based on market price and 5.42% based on NAV. For the same period, the closed-end Lipper US Mortgage Funds category posted an average return of 14.10% on a market price basis and 9.15% on a NAV basis. All returns reflect reinvestment of dividends. The Trust s discount to NAV, which widened during the period, accounts for the difference between performance based on price and performance based on NAV. The Trust s underweight in agency MBS, in favor of US Treasuries and agency debt, detracted from performance as spread sectors continued to rally during the second half of 2009. On the positive side, the Trust benefited from out-of-index allocations to non-agency MBS and commercial MBS, which outperformed agency MBS for the period as risk assets continued to rally due to continued government support and improving economic indicators. In addition, the Trust benefited from security selection focusing on current coupon MBS, which rallied due to the Federal Reserve s reduction in supply through the agency MBS purchase program. The Trust s cash position (45% at period end) serves primarily to back our forward positions held in mortgage TBA (To Be Announced) contracts and, therefore, did not have a material impact on performance.

BlackRock Strategic Bond Trust

Investment Objective

BlackRock Strategic Bond Trust (BHD) (the Trust) seeks total return through high current income and capital appreciation.

No assurance can be given that the Trust s investment objective will be achieved.

Performance

For the six months ended February 28, 2010, the Trust returned 11.96% based on market price and 12.44% based on NAV. For the same period, the closed-end Lipper High Current Yield Funds (Leveraged) posted an average return of 21.84% on a market price basis and 18.08% on a NAV basis. All returns reflect reinvestment of dividends. The Trust s discount to NAV, which widened during the period, accounts for the difference between performance based on price and performance based on NAV. Positioning in the high yield portion of the portfolio was a plus during the period. We found particularly good value in the automotive segment, which represented the Trust s largest sector overweight. As a group, automotive holdings performed quite well and, thus, were key contributors to performance. In addition, investments in select special situations or distressed credits (including several in the automotive sector) enhanced results. On a credit basis, the Trust s underweight position in BB credits and overweight in the lower-quality ratings and nonrated credits were additive. A lower allocation to corporates, in favor of bank loans, was advantageous as well. On the other hand, the Trust s allocation to investment-grade credit detracted from relative performance during a period in which high yield outperformed. (Most of the funds in the Lipper category invest primarily in high yield.) The Trust s relatively low levels of leverage (at period end, 6% of the Trust s total managed assets) also detracted.

The views expressed reflect the opinions of BlackRock as of the date of this report and are subject to change based on changes in market, economic or other conditions. These views are not intended to be a forecast of future events and are no guarantee of future results.

SEMI-ANNUAL REPORT	FEBRUARY 28, 2010	11

The Benefits and Risks of Leveraging

The Trusts may utilize leverage to seek to enhance the yield and NAV. However, these objectives cannot be achieved in all interest rate environments.

The Trusts may utilize leverage through borrowings, including participation in the Term Asset-Backed Securities Loan Facility (TALF), or through entering into reverse repurchase agreements and dollar rolls. In general, the concept of leveraging is based on the premise that the cost of assets to be obtained from leverage will be based on short-term interest rates, which normally will be lower than the income earned by each Trust on its longer-term portfolio investments. To the extent that the total assets of each Trust (including the assets obtained from leverage) are invested in higher-yielding portfolio investments, each Trust s shareholders will benefit from the incremental net income.

The interest earned on securities purchased with the proceeds from leverage is paid to shareholders in the form of dividends, and the value of these portfolio holdings is reflected in the per share NAV. However, in order to benefit shareholders, the yield curve must be positively sloped; that is, short-term interest rates must be lower than long-term interest rates. If the yield curve becomes negatively sloped, meaning short-term interest rates exceed long-term interest rates, income to shareholders will be lower than if the Trusts had not used leverage.

To illustrate these concepts, assume a Trust scapitalization is \$100 million and it borrows an additional \$30 million, creating a total value of \$130 million available for investment in long-term securities. If prevailing short-term interest rates are 3% and long-term interest rates are 6%, the yield curve has a strong positive slope. In this case, the Trust pays borrowing costs and interest expense on the \$30 million of borrowings based on the lower short-term interest rates. At the same time, the securities purchased by the Trust with assets received from the borrowings earn the income based on long-term interest rates. In this case, the borrowing costs and interest expense is significantly lower than the income earned on the Trust s long-term investments, and therefore each Trust s shareholders is the beneficiaries of the incremental net income.

If short-term interest rates rise, narrowing the differential between short-term and long-term interest rates, the incremental net income pickup will be reduced or eliminated completely. Furthermore, if prevailing short-term interest rates rise above long-term interest rates of 6%, the yield curve has a negative slope. In this case, the Trust pays interest expense on the higher short-term interest rates whereas the Trust stotal portfolio earns income based on lower long-term interest rates.

Furthermore, the value of the Trust s portfolio investments generally varies inversely with the direction of long-term interest rates, although other factors can influence the value of portfolio investments. In contrast, the redemption value of the Trust s borrowings do not fluctuate in relation to interest rates. As a result, changes in interest rates can influence the Trust s NAV positively or negatively in addition to the impact on Trust performance from leverage from borrowings.

The use of leverage may enhance opportunities for increased income to the Trusts and shareholders, but as described above, it also creates risks as short- or long-term interest rates fluctuate. Leverage also will generally cause greater changes to each Trust s NAV, market price and dividend rate than a comparable portfolio without leverage. If the income derived from securities purchased with assets received from leverage exceeds the cost of leverage, each Trust s net income will be greater than if leverage had not been used. Conversely, if the income from the securities purchased is not sufficient to cover the cost of leverage, each Trust s net income will be less than if leverage had not been used, and therefore the amount available for distribution to shareholders will be reduced. Each Trust may be required to sell portfolio securities at inopportune times or at distressed values in order to comply with regulatory requirements applicable to the use of leverage or as required by the terms of leverage instruments, which may cause a Trust to incur losses. The use of leverage may limit each Trust s ability to invest in certain types of securities or use certain types of hedging strategies. Each Trust will incur expenses in connection with the use of leverage, all of which are borne by Common Shareholders of each Trust and may reduce income to the Common Shares.

Under the Investment Company Act of 1940, the Trusts are permitted to borrow through a credit facility up to 33 % of their total managed assets. As of February 28, 2010, the Trusts had outstanding leverage from borrowings and/or reverse repurchase agreements as a percentage of their total managed assets as follows:

HYT 21% HIS 18% BHY 18%

Derivative Financial Instruments

The Trusts may invest in various derivative instruments, including financial futures contracts, swaps, options and foreign currency exchange contracts, as specified in Note 2 of the Notes to Financial Statements, which constitute forms of economic leverage. Such instruments are used to obtain exposure to a market without owning or taking physical custody of securities or to hedge market, equity, credit, foreign currency exchange rate and/or interest rate risks. Such derivative instruments involve risks, including the imperfect correlation between the value of a derivative instrument and the underlying asset, possible default of the other party to the transaction or illiquidity of the derivative instrument. Each Trust s ability to successfully use a derivative instrument depends on the investment advisor s ability to accurately predict pertinent market movements, which cannot be assured. The use of derivative instruments may result in losses greater than if they had not been used, may require a Trust to sell or purchase portfolio securities at inopportune times or distressed values, may limit the amount of appreciation a Trust can realize on an investment or may cause a Trust to hold a security that they might otherwise sell. The Trusts investments in these instruments are discussed in detail in the Notes to Financial Statements.

For Trust compliance purposes, the Trust s industry classifications refer to any one or more of the industry sub-classifications used by one or more widely recognized market indexes or ratings group indexes, and/or as defined by Trust management. This definition may not apply for purposes of this report, which may combine industry sub-classifications for reporting ease.

Fair Value Measurements Various inputs are used in determining the fair value of investments, which are as follows:

- Level 1 price quotations in active markets/exchanges for identical assets and liabilities
- Level 2 other observable inputs (including, but not limited to: quoted prices for similar assets or liabilities in markets that are active, quoted prices for identical or similar assets or liabilities in markets that are not active, inputs other than quoted prices that are observable for the assets or liabilities (such as interest rates, yield curves, volatilities, repayment speeds, loss severities, credit risks and default rates) or other market-corroborated inputs)
- Level 3 unobservable inputs based on the best information available in the circumstances, to the extent observable inputs are not available (including the Trust s own assumptions used in determining the fair value of investments)

The inputs or methodology used for valuing securities are not necessarily an indication of the risk associated with investing in those securities. For information about the Trust s policy regarding valuation of investments and other significant accounting policies, please refer to Note 1 of the Notes to Financial Statements.

See Notes to Financial Statements.

For Trust compliance purposes, the Trust s industry classifications refer to any one or more of the industry sub-classifications used by one or more widely recognized market indexes or rating group indexes, and/or as defined by Trust management. This definition may not apply for purposes of this report, which may combine such industry sub-classifications for reporting ease.

Fair Value Measurements Various inputs are used in determining the fair value of investments, which are as follows:

Level 1 price quotations in active markets/exchanges for identical assets and liabilities

Level 2 other observable inputs (including, but not limited to: quoted prices for similar assets or liabilities in markets that are active, quoted prices for identical or similar assets or liabilities in markets that are not active, inputs other than quoted prices that are observable for the assets or liabilities (such as interest rates, yield curves, volatilities, repayment speeds, loss severities, credit risks and default rates) or other market-corroborated inputs)

Level 3 unobservable inputs based on the best information available in the circumstances, to the extent observable inputs are not available (including the Trust s own assumptions used in determining the fair value of investments)

The inputs or methodologies used for valuing securities are not necessarily an indication of the risk associated with investing in those securities. For information about the Trust s policy regarding valuation of investments and other significant accounting policies, please refer to Note 1 of the Notes to Financial Statements.

See Notes to Financial Statements.

Using Standard & Poor s ratings of the issuer.

For Trust compliance purposes, the Trust s industry classifications refer to any one or more of the industry sub-classifications used by one more widely recognized market indexes or ratings group indexes, and/or as defined by Trust management. This definition may not apply for purposes of this report which may combine industry sub-classifications for reporting ease.

Fair Value Measurements Various inputs are used in determining the fair value of investments, which are as follows:

Level 1 price quotations in active markets/exchanges for identical assets and liabilities

Level 2 other observable inputs (including, but not limited to: quoted prices for similar assets or liabilities in markets that are active, quoted prices for identical or similar assets or liabilities in markets that are not active, inputs other than quoted prices that are observable for the assets or liabilities (such as interest rates, yield curves, volatilities, repayment speeds, loss severities, credit risks and default rates) or other market-corroborated inputs)

Level 3 unobservable inputs based on the best information available in the circumstances, to the extent observable inputs are not available (including the Trust s own assumptions used in determining the fair value of investments)

The inputs or methodology used for valuing securities are not necessarily an indication of the risk associated with investing in those securities. For information about the Trust s policy regarding valuation of investments and other significant accounting policies, please refer to Note 1 of the Notes to Financial Statements.

The following tables summarize the inputs used as of February 28, 2010 in determining the fair valuation of the Trust s investments:

Using maximum potential amount the Trust may be required to pay should a negative credit event take place as defined under the terms of the agreement.

For Trust compliance purposes, the Trust s industry classifications refer to any one or more of the industry sub-classifications used by one or more widely recognized market indexes or ratings group indexes, and/or as defined by Trust management. This definition may not apply for purposes of this report, which may combine industry sub-classifications for reporting ease.

Fair Value Measurements Various inputs are used in determining the fair value of investments, which are as follows:

Level 1 price quotations in active markets/exchanges for identical assets and liabilities

Level 2 other observable inputs (including, but not limited to: quoted prices for similar assets or liabilities in markets that are active, quoted prices for identical or similar assets or liabilities in markets that are not active, inputs other than quoted prices that are observable for the assets or liabilities (such as interest rates, yield curves, volatilities, prepayment speeds, loss severities, credit risks and default rates) or other market-corroborated inputs)

Level 3 unobservable inputs based on the best information available in the circumstances, to the extent observable inputs are not available (including the Trust s own assumptions used in determining the face value of investments)

The inputs or methodologies used for valuing securities are not necessarily an indication of the risk associated with investing in those securities. For information about the Trust s policy regarding valuation of investments and other significant accounting policies, please refer to Note 1 of the Notes to Financial Statements.

The following tables summarize the inputs used as of February 28, 2010 in determining the fair valuation of the Trust s investments:
