

ROYAL BANK OF SCOTLAND GROUP PLC
Form 6-K
August 02, 2013

FORM 6-K
SECURITIES AND EXCHANGE COMMISSION
Washington D.C. 20549

Report of Foreign Private Issuer

Pursuant to Rule 13a-16 or 15d-16
of the Securities Exchange Act of 1934

For August 2, 2013

Commission File Number: 001-10306

The Royal Bank of Scotland Group plc

RBS, Gogarburn, PO Box 1000
Edinburgh EH12 1HQ

(Address of principal executive offices)

Indicate by check mark whether the registrant files or will file annual reports under cover of Form 20-F or Form 40-F.

Form 20-F X

Form 40-F ___

Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(1): _____

Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(7): _____

Indicate by check mark whether the registrant by furnishing the information contained in this Form is also thereby furnishing the information to the Commission pursuant to Rule 12g3-2(b) under the Securities Exchange Act of 1934.

Yes ___

No X

If "Yes" is marked, indicate below the file number assigned to the registrant in connection with Rule 12g3-2(b): 82-

The following information was issued as a Company announcement in London, England and is furnished pursuant to General Instruction B to the General Instructions to Form 6-K

Market risk capital	4

Appendix 4 Market risk (continued)

Trading revenues*

The graph below shows the daily distribution of trading and related revenues for Markets for the half years ended 30 June 2013 and 30 June 2012.

http://www.rns-pdf.londonstockexchange.com/rns/7943K_-2013-8-1.pdf

Note:

- (1) The effect of any month end adjustments, not attributable to a specific daily market move, is spread evenly over the trading days in that specific month.

Key points

.

Markets focused on reducing its balance sheet and lowering risk during H1 2013. This combined with a weaker trading performance and market uncertainty following the Federal Reserve's comments about a tapering of quantitative easing, limiting opportunities for income generation. In contrast, H1 2012 performance was stronger as global markets were boosted by the European Central Bank's Long Term Refinancing Operation.

- The average daily revenue earned by Markets' trading activities in H1 2013 was £12 million, compared with £22 million in H1 2012. The standard deviation of the daily revenues decreased from £16 million to £11 million. The number of days with negative revenue increased to 13 from nine. The most frequent daily revenue range was between £10 million and £15 million, which occurred 27 times. In H1 2012, the most frequent daily revenue range was between £20 million and £25 million, which occurred 19 times.

Appendix 4 Market risk (continued)

Structured credit portfolio

The structured credit portfolio is within Non-Core. These assets are managed on a third party asset and risk-weighted assets basis. The table below shows the open market risk in the structured credit portfolio.

	Drawn notional					Fair value				
	CDOs	CLOs	Other		Total	CDOs	CLOs	Other		Total
			MBS	ABS				MBS	ABS

31 December 2012										
1-2 years	-	-	-	80	80	-	-	-	74	74
3-4 years	-	-	27	82	109	-	-	24	76	100
4-5 years	-	-	95	-	95	-	-	86	-	86
5-10 years	-	310	92	-	402	-	295	44	-	339
>10 years	289	279	380	398	1,346	116	256	253	254	879
	289	589	594	560	2,032	116	551	407	404	1,478

Notes:

- (1) Collateralised debt obligations.
- (2) Collateralised loan obligations.
- (3) Mortgage-backed securities.
- (4) Asset-backed securities.

Key point

- The drawn notional and fair value decreased to £1.4 billion and £1.1 billion respectively reflecting the sale of underlying assets from CDO collateral pools and legacy conduits. The reductions were across all asset classes.

Appendix 4 Market risk (continued)

Market risk capital*

Minimum capital requirements

The following table analyses the principal model-based contributors to the market risk minimum capital requirement, calculated in accordance with Basel 2.5.

	30 June 2013			Period end	
	Average (1)	Maximum (1)	Minimum (1)	Period end	31 December 2012
	£m	£m	£m	£m	£m
Value-at-risk (VaR) (1)	825	875	783	810	825
Stressed VaR (SVaR)	1,185	1,266	1,120	1,134	1,226
Incremental risk charge (IRC)	426	458	405	414	467
All price risk (APR)	12	13	10	12	12

Note:

- (1) The average, maximum and minimum are based on the monthly Pillar 1 model based capital requirements.

Key points

- SVaR increased slightly in January as the Markets Delta business repositioned its exposures to longer-dated maturities. The SVaR then decreased over the remainder of H1 2013, reflecting continued de-risking by a number of Markets businesses.
- The IRC fell in January 2013 as Markets businesses reduced exposures, then increased in April 2013 as the Markets Delta business repositioned its exposure to peripheral eurozone countries. The IRC then fell as the business reduced its exposures to European and peripheral eurozone countries over the remainder of the period.

Appendix 5 Country risk (continued)

Eurozone periphery by country: Ireland (continued)

Key points*

- Ulster Bank Group's (UBG) Irish exposure comprises personal lending (largely mortgages) and corporate lending and commitments, as well as some lending to financial institutions (refer to the UBG section on page 52 of Appendix 3 for further details). International Banking also has lending and commitments, and Markets has derivatives and repo exposure to financial institutions and large international clients with funding subsidiaries based in Ireland.
- Total exposure remained broadly unchanged at £42.7 billion, with some increase in personal lending driven by currency movements offset by small decreases in repos, derivatives and debt securities. Risk elements in lending

and provisions increased by £1.3 billion and £0.8 billion, respectively with most of it relating to corporate lending.

- Government and central bank

Exposure to the central bank fluctuates and is driven by regulatory requirements and deposits of excess liquidity.

- Financial institutions

Markets, International Banking and UBG together account for the large majority of the Group's exposure to financial institutions. The main categories are derivatives and repos, where exposure is significantly affected by market movements but much of it is collateralised.

Repo exposure to banks declined by £0.4 billion as one large position matured.

- Corporate

Lending increased slightly to £18.1 billion but was down on a constant currency basis. Commercial real estate lending amounted to £10.7 billion at 30 June 2013 (nearly all in UBG; £7.9 billion of this was in Non-Core), up £0.2 billion due to exchange rate movements. On a constant currency basis, the exposures decreased due to recoveries and write-offs in UBG. Commercial real estate lending included REIL of £8.7 billion, 56% of which were covered by provisions.

- Personal

Overall lending increased by £0.6 billion, but declined on a constant currency basis as a result of amortisation. Residential mortgage loans amounted to £17.5 billion at 30 June 2013, including REIL of £3.3 billion with loan provisions of £1.7 billion. The housing market continued to suffer from weak domestic demand, although house prices stabilised at approximately 50% below their 2007 peak.

- Non-Core (included above)

Non-Core lending was £9.6 billion at 30 June 2013, slightly up due to foreign exchange movements and with adverse market conditions still hampering the sale of assets. The lending portfolio largely consisted of exposures to commercial real estate (83%), retail (4%) and leisure (4%).

Appendix 5 Country risk (continued)

Eurozone periphery by country: Spain (continued)

Key points*

- Exposure to Spain is driven by corporate lending in International Banking, derivative position with large banks in Markets and a sizeable AFS mortgage-backed (largely covered bond) portfolio held within the liquidity portfolio managed by Group Treasury.
- Group exposure was stable at £13.4 billion, with some reductions in corporate lending and in derivatives exposure to banks alongside an increase in AFS debt securities issued by banks.
- Government and central bank

The Group has a trading portfolio of Spanish government debt and CDS exposures that can result in fluctuations between long and short positions for HFT debt securities.

- Financial institutions

The Group's largest exposure was the AFS securities (mainly the covered bond portfolio) with a fair value of £5.4 billion at 30 June 2013 - an increase of £0.5 billion due to improving market sentiment for Spanish bonds and the resulting narrowing of spreads and higher prices. The Group monitors the situation closely with periodic stress analyses.

Derivatives exposure, mostly to Spanish international banks and a few of the large regional banks, and mostly collateralised, decreased by £0.2 billion to £1.0 billion at 30 June 2013, in part as a result of the sale of European CDS positions. Gross repos with large Spanish banks increased by £3.0 billion while net repo exposure remained at

nil.

Lending to non-bank financial institutions decreased to de minimis levels, the result of active risk management.

· Corporate

Lending decreased by £0.3 billion to £3.9 billion during H1 2013, due to reductions across a range of sectors. Commercial real estate lending increased slightly as a result of exchange rate movements, to £1.8 billion at 30 June 2013, practically all in Non-Core. The majority of REIL and loan provisions related to commercial real estate lending.

· Non-Core (included above)

At 30 June 2013, Non-Core had lending to Spain of £2.7 billion, unchanged since 31 December 2012 due to the euro appreciation and with adverse market conditions preventing the sale of assets. Commercial real estate (65%), construction (14%) and electricity (9%) sectors accounted for the majority of the lending.

-------	-----	--------	-----	-------	-----	-----	---	--------	-----

Appendix 5 Country risk (continued)

Eurozone periphery by country: Italy (continued)

Key points*

- Exposure to Italy is driven by active trading and derivatives exposure in Markets and corporate lending in International Banking.
- The Group continued to reduce and mitigate its risk through strategic exits where appropriate and through increased collateral requirements. Exposure decreased by £0.7 billion, largely in off-balance sheet exposure to corporates and non-bank financial institutions

- Government and central bank

The Group is a market-maker in Italian government bonds with large and fluctuating gross long and short positions in HFT debt securities and an active CDS portfolio. An increase in the net long HFT position in government bonds of £0.5 billion during H1 2013 reflecting yield related net acquisitions was partly matched by an increase in the net bought CDS protection of £0.2 billion.

- Financial institutions

The majority of the Group's exposure is to the top five banks. The Group's product offering consists largely of collateralised trading products and, to a lesser extent, short-term uncommitted lending lines for liquidity purposes. Risk is mitigated by fully collateralised facilities.

The AFS bond exposure to financial institutions was reduced by £0.3 billion due to sales during H1 2013.

- Corporate

Lending exposure declined slightly by £0.1 billion during H1 2013, to £1.3 billion. Off-balance sheet exposure decreased £0.3 billion, primarily in the electricity sector.

- Non-Core (included above)

Non-Core lending was £0.9 billion at 30 June 2013, slightly down from 31 December 2012. The remaining lending was mainly to the commercial real estate (30%), leisure (20%) and electricity (17%) sectors.

Appendix 5 Country risk (continued)

Eurozone periphery by country: Portugal (continued)

Key points*

- The Portuguese portfolio, managed from Spain, mainly consists of corporate lending and derivatives trading with the largest local banks. In line with the Group's de-risking strategy, there is no medium-term activity, with the exception of collateralised business.
- Group exposure declined further during H1 2013 to £1.2 billion, a reduction of £0.2 billion mostly in lending, derivatives and off-balance sheet exposure. Net bought CDS protection increased to £0.2 billion as a result of ongoing management of positions arising from flow trading.
- Government and central bank

The Group's exposure to the Portuguese government at 30 June 2013 was unchanged at £0.1 billion, comprising a small AFS debt securities position and very small derivatives and net long HFT positions.

- Financial institutions

The remaining exposure was largely focused on the top four systemically important banks. Exposures generally consisted of collateralised trading products.

- Corporate

Lending to the telecoms sector and off-balance sheet exposure to the oil and gas sector decreased to almost nil in H1 2013. The largest remaining exposure was to the land, transport & logistics and electricity sectors, focusing on a few large, highly creditworthy clients.

- Non-Core (included above)

Non-Core lending to Portugal remained unchanged during H1 2013, at £0.3 billion. The remaining portfolio largely comprised lending to the land, transport & logistics (41%) and electricity (37%) sectors.

Appendix 5 Country risk (continued)

Eurozone periphery by country: Greece (continued)

Key points*

- The Group's exposure to Greece is managed in line with the Group's de-risking strategy. The remaining Greek exposure at 30 June 2013 was £0.6 billion. The majority of this was derivative exposure to banks (itself in part collateralised). The rest was mostly corporate lending, including exposure to local subsidiaries of international companies.

- Government and central bank

The small HFT position was reduced to nil. The only remaining exposure is a small legacy derivatives exposure to the government of Greece.

- Financial institutions

Activity with Greek financial institutions was largely collateralised derivatives exposure, and remained under close scrutiny.

- Corporate

Lending exposure was stable at £0.2 billion. The Group's focus was on short-term trade facilities extended to the domestic subsidiaries of international clients, increasingly supported by parental guarantees.

- Non-Core (included above)

Non-Core lending to Greece was stable at less than £0.1 billion. The remaining lending portfolio primarily consisted of the following sectors: commercial real estate (51%), construction (32%) and other services (12%).

Appendix 5 Country risk (continued)

Eurozone non-periphery (continued)

Key points*

- The Group holds a major diversified portfolio in eurozone non-periphery countries with significant exposures to financial institutions and corporates, notably in Germany, the Netherlands and France, and as part of the Group's liquidity portfolio, significant exposure to the German central bank.
- Exposure decreased during H1 2013, particularly in liquidity held with the Bundesbank and in derivatives positions with banks in most countries. In line with exposure reductions, net bought CDS protection referencing entities in eurozone non-periphery countries declined by £1.6 billion.
- Government and central bank

The Group held significant short-term surplus liquidity with central banks because of credit risk and capital considerations, and limited alternative investment opportunities. This exposure also fluctuates as part of the Group's asset and liability management.

Germany: AFS government bond positions decreased by £1.3 billion largely in line with liquidity portfolio management strategies. The net long HFT position in German government bonds in Markets increased by £1.5 billion, driven by market opportunities.

France: the net long HFT position in Markets declined in H1 2013 by £1.4 billion, as part of normal flow trading activity in the rates business.

· Financial institutions

The sale of a significant part of the European CDS positions by Markets in Q2 resulted in major reductions in gross derivatives and some reductions in net derivatives to CDS counterparties - banks and other financial institutions - in Germany, France, the Netherlands and, to a lesser degree, Belgium and other eurozone countries.

France: lending to banks increased by £0.5 billion in H1 2013, largely as a result of transaction with a large bank.

Luxembourg: repo exposure, mostly to funds, increased by £0.4 billion and lending to financial services companies increased by £0.3 billion in the same period.

*Not within the scope of Deloitte LLP's review report

Appendix 5 Country risk (continued)

Eurozone non-periphery (continued)

Key points* (continued)

· Corporate

Germany: lending to corporate clients fell by £0.4 billion, as a result of reductions in the oil and gas and media sectors.

Netherlands: lending to corporate clients increased by £0.5 billion, in the construction and electricity sectors. Off-balance sheet exposure decreased in telecommunications sector by £0.3 billion.

Luxembourg: off-balance sheet exposure to corporate clients increased by £0.5 billion due to increase in the land, transport & logistics, automotive and food & consumer sectors.

· Non-Core lending (included above)

Germany: exposure decreased slightly to £2.7 billion at 30 June 2013. Most of the lending was in the commercial real estate (65%) and leisure (15%) sectors.

Netherlands: Non-Core lending decreased slightly to £1.9 billion. Most of the lending was in the commercial real estate (58%) and securitisations (19%) sectors.

France: exposure was £1.4 billion at 30 June 2013, a decline of £0.2 billion and mainly comprised public sector (35%), commercial real estate (24%) and construction (16%) exposures.
