Registration No. 333-134851

PROSPECTUS

MARCHEX, INC.

662,717 Shares

Class B Common Stock

This prospectus relates to 662,717 shares of our Class B common stock that may be sold from time to time by the selling stockholders named in this prospectus.

This offering is not being underwritten. The selling stockholders may offer the shares through public or private transactions at the market price for our Class B common stock at the time of the sale, a price related to the market price, a negotiated price or such other prices as the selling stockholders determine from time to time. See Plan of Distribution beginning on page 22.

All of the net proceeds from the sale of these shares of Class B common stock will go to the selling stockholders. We will not receive any proceeds from sales of these shares. We will bear the costs relating to the registration of these shares.

Our Class B common stock is quoted on the Nasdaq National Market under the symbol MCHX.

You should read this prospectus carefully before you invest.

Investing in our Class B common stock involves substantial risks. See Risk Factors beginning on page 1.

Neither the Securities and Exchange Commission nor any state securities commission has approved or disapproved of these securities, or determined if this prospectus is truthful or complete. Any representation to the contrary is a criminal offense.

The date of this prospectus is June 22, 2006.

MARCHEX, INC.

SUMMARY

We deliver vertical and local online traffic to merchant advertisers and help publishers monetize traffic on their Web site(s). We do this primarily through providing merchants with performance-based advertising and search marketing technology services to market their products or services across relevant online distribution points, including search engines, product shopping engines, vertical Web sites, and local Web sites; and through providing publishers with merchant advertisers who are looking to market their products or services on the publisher search network, shopping network, or Web site, or a specific page of the publisher Web site.

We offer advertiser technology services that allow us to aggregate merchants of different profiles, ranging from small local businesses to large enterprises. Our merchant advertiser technology services include: feed management, bid management, contextual targeting, pay-per-click targeting, natural search optimization and outsourced search marketing platforms, which is a combination of many of our advertiser technology services that we provide to super-aggregator partners and publishers to allow them to sell search marketing packages directly to their customers. We have a broad network of online distribution for our merchant advertisers' products that consist of: (1) a partner network, which are publishers that want our merchants' products or advertisements which they can promote on their network or Web site(s), and (2) a proprietary network, which is traffic that comes to Web sites we own. Our partner network includes search engines, product shopping engines, and vertical Web sites, such as Google, Yahoo, Microsoft, Shopping.com, Shopzilla, BusinessWeek.com, Forbes.com, Travel + Leisure, the Ziff Davis Media Web sites, and others. Our proprietary network is comprised of more than 200,000 Web sites.

In this prospectus, the terms Marchex, company, we, us and our refer to Marchex, Inc. and its wholly-owned subsidiaries. We were incorporated in the State of Delaware. Our principal executive offices are located at 413 Pine Street, Suite 500, Seattle, Washington 98101 and our telephone number is (206) 331-3300.

This prospectus relates to 662,717 shares of our Class B common stock that may be sold from time to time by the selling stockholders named in this prospectus. The stockholders are identified in the section headed Selling Stockholders. We will not receive any of the proceeds for the resale of these shares.

RISK FACTORS

You should carefully consider the risks described below before making an investment decision regarding our securities. If any of the following risks actually occurs, our business, financial condition and results of operations could be harmed. In that case, the trading price of our securities could decline and you could lose all or part of your investment. Additional risks not presently known to us or that we currently deem immaterial may also impair our business operations.

Risks Relating to Our Company

Our limited operating history makes evaluation of our business difficult.

We were formally incorporated in January 2003. We acquired Enhance Interactive in February 2003, TrafficLeader in October 2003 and goClick in July 2004. We acquired certain assets of Name Development in February 2005, certain assets of Pike Street Industries in April 2005 and certain assets of each of AreaConnect and Open List in May 2006. In July 2005 we completed the acquisition of IndustryBrains.

We have limited historical financial data upon which to base planned operating expenses or forecast accurately our future operating results. Further, our limited operating history will make it difficult for investors and securities analysts to evaluate our business and prospects. Our failure to address these risks and difficulties successfully could seriously harm us.

Table of Contents

We have largely incurred net losses since our inception, and we may incur net losses in the foreseeable future.

We had an accumulated deficit of \$2.8 million as of December 31, 2005. While we recently achieved profitability, we may not be able to sustain it. Our net expenses may increase based on the initiatives we undertake which for instance, may include increasing our sales and marketing activities, hiring additional personnel, incurring additional costs as a result of being a public company, and acquiring additional businesses. In addition, commencing January 1, 2006, we are required to expense the fair value of stock options granted.

We are dependent on certain distribution partners, including Yahoo! and its subsidiaries, for distribution of our services, and we derive a significant portion of our total revenue through these distribution partners. A loss of distribution partners or a decrease in revenue from certain distribution partners could adversely affect our business. Yahoo! is also a significant customer.

A relatively small number of distribution partners currently deliver a significant percentage of traffic to our merchant listings. Yahoo! Search Marketing is our largest distribution partner and delivers traffic to our merchant listings which collectively represents approximately 11% of our total revenue for the year ended December 31, 2005. Separately, Yahoo! Search Marketing was responsible for 23% of our total revenue during the same period principally in respect of the revenues associated with our portfolio of domains.

Our existing agreements with many of our larger distribution partners permit either company to terminate without penalty on short notice and are primarily structured on a variable-payment basis, under which we make payments based on a specified percentage of revenue or based on the number of paid click-throughs. We intend to continue devoting resources in support of our larger distribution partners, but there are no guarantees that these relationships will remain in place over the short- or long-term. In addition, we cannot be assured that any of these distribution partners will continue to generate current levels of revenue for us or that we will be able to maintain the applicable variable payment terms at their current levels. A loss of any of these distribution partners or a decrease in revenue due to lower traffic or less favorable variable payment terms from any one of these distribution relationships could have an adverse effect on our revenue, and the loss of any one large distribution partner could have a material adverse effect on our business, financial condition and results of operations.

Companies distributing advertising on the Internet have experienced, and will likely continue to experience, consolidation. This consolidation has reduced the number of partners that control the online advertising outlets with the most user traffic. According to the comScore Media Metrix qSearch report for November 2005, Yahoo! Search accounted for 30% of the online searches in the United States and Google accounted for 40%. As a result, the larger distribution partners have greater control over determining the market terms of distribution, including placement of merchant advertisements and cost of placement. In addition, many participants in the performance- based advertising and search marketing industries control significant portions of the traffic that they deliver to advertisers.

We do not believe, for example, that Yahoo! and Google are as reliant as we are on a third-party distribution network to deliver their services. This gives these companies a significant advantage over us in delivering their services, and with a lesser degree of risk.

We may incur liabilities for the activities of our merchant advertisers, distribution partners and other users of our services, which could adversely affect our business.

Many of our advertisement generation and distribution processes are automated. In most cases, merchant advertisers use our online tools and account management systems to create and submit merchant listings. These merchant listings are submitted in a bulk data feed to our distribution partners. Although we monitor our distribution partners on an ongoing basis primarily for traffic quality, these partners control the distribution of the merchant listings provided in the data feed.

Table of Contents

As a result, we do not conduct a manual editorial review of a substantial number of our merchant listings, nor do we manually review the display of the vast majority of the merchant listings by our distribution partners. We may not successfully avoid liability for unlawful activities carried out by our merchant advertisers and other users of our services or unpermitted uses of our merchant listings by distribution partners and their affiliates.

Our potential liability for unlawful activities of our merchant advertisers and other users of our services or unpermitted uses of our merchant listings by distribution partners could require us to implement measures to reduce our exposure to such liability, which may require us, among other things, to spend substantial resources, to discontinue certain service offerings or to terminate certain distribution partner relationships. For example, as a result of the actions of merchant advertisers in our network, we may be subject to civil claims relating to a wide variety of issues, such as privacy, gambling, promotions, and intellectual property ownership and infringement. Under agreements with certain of our larger distribution partners, we may be required to indemnify these distribution partners against liabilities or losses resulting from the content of our merchant listings. Although our merchant advertisers indemnify us with respect to claims arising from these listings, we may not be able to recover all or any of the liabilities or losses incurred by us as a result of the activities of our merchant advertisers.

We have a large number of distribution partners who display our merchant listings on their networks. Our merchant listings are predominantly delivered to our distribution partners in an automated fashion through an XML data feed or data dump. Our distribution partners are required contractually to use the merchant listings that we provide in accordance with applicable laws and regulations and in conformity with our publication restrictions included in our agreements, which are intended to promote the quality and validity of the traffic provided to our merchant advertisers. Nonetheless, we do not operationally control or manage these distribution partners and any breach of these agreements on the part of any distribution partner or its affiliates could result in liability for our business. These agreements include indemnification obligations on the part of our distribution partners, but there is no assurance that we would be able to collect against offending distribution partners or their affiliates in the event of a claim under these indemnification provisions.

Our insurance policies may not provide coverage for liability arising out of activities of users of our services. Furthermore, we may not be able to obtain or maintain adequate insurance coverage to reduce or limit the liabilities associated with our businesses. Any costs incurred as a result of such liability or asserted liability could have a material adverse effect on our business, operating results and financial condition.

If we do not maintain and grow a critical mass of merchant advertisers and distribution partners, the value of our services could be adversely affected.

Our success depends, in large part, on the maintenance and growth of a critical mass of merchant advertisers and distribution partners and a continued interest in our performance-based advertising and search marketing services. Merchant advertisers will generally seek the most competitive return on investment from advertising and marketing services. Distribution partners will also seek the most favorable payment terms available in the market. Merchant advertisers and distribution partners may change providers or the volume of business with a provider, unless the product and terms are competitive. In this environment, we must compete to acquire and maintain our network of merchant advertisers and distribution partners.

If our business is unable to maintain and grow our base of merchant advertisers, our current distribution partners may be discouraged from continuing to work with us, and this may create obstacles for us to enter into agreements with new distribution partners. Similarly, if our distribution network does not grow and does not continue to improve over time, current and prospective merchant advertisers may reduce or terminate their business with us. Any decline in the number of merchant advertisers and distribution partners could adversely affect the value of our services.

Table of Contents

We are dependent upon the quality of traffic in our network to provide value to our merchant advertisers, and any failure in our quality control could have a material adverse effect on the value of our services to our merchant advertisers and adversely affect our revenues.

We utilize certain monitoring processes with respect to the quality of the traffic that we deliver to our merchant advertisers. Among the factors we seek to monitor are sources and causes of low quality clicks such as non-human processes, including robots, spiders or other software, the mechanical automation of clicking, and other types of invalid clicks, click fraud, or click spam, the purpose of which is something other than to view the underlying content. Additionally, we also seek to identify other indicators which may suggest that a user may not be targeted by or desirable to our merchant advertisers. Even with such monitoring in place, there is a risk that a certain amount of low-quality traffic or traffic that is deemed to be less valuable by our merchant advertisers will be delivered to such merchant advertisers, which may be detrimental to those relationships. Low-quality traffic may further prevent us from growing our base of merchant advertisers and cause us to lose relationships with existing merchant advertisers which could adversely affect our revenues.

We may be subject to intellectual property claims, which could adversely affect our financial condition and ability to use certain critical technologies, divert our resources and management attention from our business operations and create uncertainty about ownership of technology essential to our business.

Our success depends, in part, on our ability to protect our intellectual property and to operate without infringing on the intellectual property rights of others in the process. There can be no guarantee that any of our intellectual property will be adequately safeguarded, or that it will not be challenged by third parties. We may be subject to patent infringement claims or other intellectual property infringement claims, including claims of trademark infringement in connection with our acquisition of previously-owned Internet domain names, that would be costly to defend and could limit our ability to use certain critical technologies.

Any patent or other intellectual property litigation could negatively impact our business by diverting resources and management attention from other aspects of the business and adding uncertainty as to the ownership of technology, services and property that we view as proprietary and essential to our business. In addition, a successful claim of patent infringement against us and our failure or inability to license the infringed or similar technology on reasonable terms, or at all, could have a material adverse effect on our business.

We may need additional funding to meet our obligations and to pursue our business strategy. Additional funding may not be available to us and our financial condition could therefore be adversely affected.

We may require additional funding to meet our ongoing obligations and to pursue our business strategy, which may include the selective acquisition of businesses and technologies. In addition, we have incurred and we may incur certain obligations in the future, including:

In February 2005, we entered into agreements with Overture, pursuant to which we paid \$4.5 million in an upfront payment (and an additional \$674,000 in certain circumstances) and a contingent royalty based on 3.0% (3.75% under certain circumstances) of certain of our gross revenues payable on a quarterly basis through December 2016.

We are obligated to pay quarterly dividends to the holders of preferred stock at an annual rate of \$11.875 per preferred share. There are currently approximately 142,137 shares of preferred stock outstanding following the conversions into shares of Class B common stock that have occurred through March of 2006.

If debentures are issued upon exchange of the preferred stock, we will become obligated to make interest payments to the holders of the debentures.

Table of Contents

There can be no assurance that if we were to need additional funds to meet these obligations that additional financing arrangements would be available in amounts or on terms acceptable to us, if at all. Furthermore, if adequate additional funds are not available, we will be required to delay, reduce the scope of, or eliminate material parts of the implementation of our business strategy, including potential additional acquisitions or internally-developed businesses.

Our acquisitions could divert management's attention, cause ownership dilution to our stockholders, cause our earnings to decrease and be difficult to integrate.

Our business strategy includes identifying, structuring, completing and integrating acquisitions. Acquisitions in the technology and Internet sectors involve a high degree of risk. We may also be unable to find a sufficient number of attractive opportunities to meet our objectives which include revenue growth, profitability and competitive market share. Our acquired companies may have histories of net losses and may expect net losses for the foreseeable future.

Acquisitions are accompanied by a number of risks that could harm our business, operating results and financial condition:

We could experience a substantial strain on our resources, including time and money, and we may not be successful;

Our management's attention could be diverted from our ongoing business concerns;

While integrating new companies, we may lose key executives or other employees of these companies;

We may issue shares of our Class B common stock as consideration for acquisitions which may result in ownership dilution to our stockholders;

We could fail to successfully integrate our financial and management controls, technology, reporting systems and procedures, or adequately expand, train and manage our workforce;

We could experience customer dissatisfaction or performance problems with an acquired company or technology;

We could become subject to unknown or underestimated liabilities of an acquired entity or incur unexpected expenses or losses from such acquisitions;

We could incur possible impairment charges related to goodwill or other intangible assets or other unanticipated events or circumstances, any of which could harm our business; and

We may be exposed to investigations and/or audits by federal, state or other taxing authorities.

Consequently, we might not be successful in integrating any acquired businesses, products or technologies, and might not achieve anticipated revenue and cost benefits.

The loss of our senior management, including our founding executive officers, could harm our current and future operations and prospects.

Edgar Filing: MARCHEX INC - Form 424B3

We are heavily dependent upon the continued services of Russell C. Horowitz, our chairman and chief executive officer, and John Keister, our president and chief operating officer, and the other members of our senior management team. Each member of our senior management team is an at-will employee and may voluntarily terminate his employment with us at any time with minimal notice. Russell C. Horowitz, Ethan A. Caldwell, Peter Christothoulou and John Keister, our founding executive officers, each own shares of fully vested Class A common stock. Following any termination of employment, each of these employees would only be subject to a twelve-month non-competition and non-solicitation obligation with respect to our clients and customers under our standard confidentiality agreement.

Table of Contents

Further, as of December 31, 2005, Russell C. Horowitz, Ethan A. Caldwell, Peter Christothoulou and John Keister together controlled 89% of the combined voting power of our outstanding capital stock excluding shares of Class B common stock issuable upon conversion of preferred stock. Their collective voting control is not tied to their continued employment with Marchex. The loss of the services of any member of our senior management, including our founding executive officers, for any reason, or any conflict among our founding executive officers, could harm our current and future operations and prospects.

We may have difficulty attracting and retaining qualified, experienced, highly skilled personnel, which could adversely affect the implementation of our business plan.

In order to fully implement our business plan, we will need to attract and retain additional qualified personnel. Thus, our success will in significant part depend upon the efforts of personnel not yet identified and upon our ability to attract and retain highly skilled managerial, engineering, sales and marketing personnel. We are also dependent on managerial and technical personnel to the extent they may have knowledge or information about our businesses and technical systems that may not be known by our other personnel. There can be no assurance that we will be able to attract and retain necessary personnel. The failure to hire and retain such personnel could adversely affect the implementation of our business plan.

If we are unable to obtain and maintain adequate insurance, our financial condition could be adversely affected in the event of uninsured or inadequately insured loss or damage. Our ability to effectively recruit and retain qualified officers and directors may also be adversely affected if we experience difficulty in maintaining adequate directors and officers liability insurance.

We may not be able to obtain and maintain insurance policies on terms affordable to us that would adequately insure our business and property against damage, loss or claims by third parties. To the extent our business or property suffers any damages, losses or claims by third parties that are not covered or adequately covered by insurance, our financial condition may be materially adversely affected.

We currently have directors and officers liability insurance. If we are unable to maintain sufficient insurance as a public company to cover liability claims made against our officers and directors, we may not be able to retain or recruit qualified officers and directors to manage our company, which could have a material adverse effect on our operations.

New rules, including those contained in and issued under the Sarbanes-Oxley Act of 2002, may make it difficult for us to retain or attract qualified officers and directors, which could adversely affect our business and our ability to maintain the listing of our Class B common stock and preferred stock on the Nasdaq National Market.

We may be unable to attract and retain qualified officers, directors and members of board committees required to provide for our effective management as a result of the recent and currently proposed changes in the rules and regulations which govern publicly-held companies, including, but not limited to, certifications from executive officers and requirements for financial experts on boards of directors. The perceived increased personal risk associated with these recent changes may deter qualified individuals from accepting these roles. The enactment of the Sarbanes-Oxley Act of 2002 has resulted in the issuance of a series of new rules and regulations and the strengthening of existing rules and regulations by the Securities and Exchange Commission, as well as the adoption of new and more stringent rules by the Nasdaq Stock Market. Further, certain of these recent and proposed changes heighten the requirements for board or committee membership, particularly with respect to an individual's independence from the corporation and level of experience in finance and accounting matters. We may have difficulty attracting and retaining directors with the requisite qualifications. If we are unable to attract and retain qualified officers and directors, our business and our ability to maintain the listing of our shares of Class B common stock and preferred stock on the Nasdaq National Market could be adversely affected.

Table of Contents

If we fail to maintain an effective system of internal controls, we may not be able to accurately report our financial results or prevent fraud, which could harm our brand and operating results.

Effective internal controls are necessary for us to provide reliable and accurate financial reports and effectively prevent fraud. We have devoted significant resources and time to comply with the new internal control over financial reporting requirements of the Sarbanes-Oxley Act of 2002. In addition, Section 404 under the Sarbanes-Oxley Act of 2002 requires that we assess and our auditors attest to the design and operating effectiveness of our controls over financial reporting. Our compliance with the annual internal control report requirement for our first fiscal year ending on or after July 15, 2006, the requisite SEC compliance date, will depend on the effectiveness of our financial reporting and data systems and controls across our operating subsidiaries. We expect these systems and controls to become increasingly complex to the extent that we integrate acquisitions and our business grows. To effectively manage this growth, we will need to continue to improve our operational, financial and management controls and our reporting systems and procedures. We cannot be certain that these measures will ensure that we design, implement and maintain adequate controls over our financial processes and reporting in the future. Any failure to implement required new or improved controls, or difficulties encountered in their implementation or operation, could harm our operating results or cause us to fail to meet our financial reporting obligations. Inferior internal controls could also cause investors to lose confidence in our reported financial information, which could have a negative effect on the trading price of our stock and our access to capital.

Accounting for employee stock options using the fair value method could significantly reduce our net income.

We adopted the provisions of Statement of Financial Accounting Standards No. 123R, Share-Based Payment (SFAS 123R) on January 1, 2006. Thus, our future consolidated financial statements will reflect the fair value of stock options granted to employees as a compensation expense, which will likely have a significant adverse impact on our results of operations and net income per share. We rely heavily on stock options to compensate existing employees and to attract new employees. If we reduce or alter our use of stock-based compensation to minimize the recognition of these expenses, our ability to recruit, motivate and retain employees may be impaired, which could put us at a competitive disadvantage in the employee marketplace. In order to prevent any net decrease in their overall compensation packages, we may choose to make corresponding increases in the cash compensation or other incentives we pay to existing and new employees. Any increases in employee wages and salaries would diminish our cash available for marketing, product development and other uses and might cause our GAAP profits to decline. Any of these effects might cause the market price of our Class B common stock and preferred stock to decline.

Impairment of goodwill and other intangible assets would result in a decrease in earnings.

Current accounting rules require that goodwill and other intangible assets with indefinite useful lives no longer be amortized, but instead be tested for impairment at least annually. These rules also require that intangible assets with definite useful lives be amortized over their respective estimated useful lives to their estimated residual values, and reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. To the extent such evaluation indicates that the useful lives of intangible assets are different than originally estimated, the amortization period is reduced or extended and, accordingly, the quarterly amortization expense is increased or decreased. We have substantial goodwill and other intangible assets, and we may be required to record a significant charge to earnings in our financial statements during the period in which any impairment of our goodwill or amortizable intangible assets is determined. Any impairment charges or changes to the estimated amortization periods could have a material adverse effect on our financial results.

Table of Contents

We may not be able to realize the intended and anticipated benefits from our acquisitions of Internet domain names, which could affect the value of these acquisitions to our business and our ability to meet our financial obligations and targets.

We may not be able to realize the intended and anticipated benefits that we currently expect from our acquisitions of Internet domain names. These intended and anticipated benefits include increasing our cash flow from operations, broadening our distribution offerings and delivering services that strengthen our merchant relationships.

Factors that could affect our ability to achieve these benefits include:

A significant amount of revenue attributed to our domain name assets comes through our agreement with Yahoo! and its subsidiaries. Under our agreement, Yahoo! has certain limited exclusive and preferential rights with respect to the commercialization of these domain names and Web sites through paid listings. Yahoo! controls the delivery of a portion of the paid listings to these domain names and Web sites. As a result, the monetization of these Web sites will initially be largely dependent on the revenue from the paid listings allocated by Yahoo! and its subsidiaries to these Web sites. This allocation may depend on Yahoo!'s advertiser base, internal policies in effect from time to time, perceived quality of traffic, origin of traffic, history of performance and conversion, technical and network changes made by Yahoo!, among many factors and determinations which may or may not be controlled by us or known to us.

We will need to continue to acquire commercially valuable Internet domain names to grow our presence in the field of direct navigation. We will need to continuously improve our technologies to acquire valuable Internet domain names as competition in the marketplace for appropriate Internet domain names intensifies. Our domain name acquisition efforts are subject to rules and guidelines established by registries which maintain Internet domain name registrations and the registrars which process and facilitate Internet domain name registrations. The registries and registrars may change the rules and guidelines for acquiring Internet domains in ways that may prove detrimental to our domain acquisition efforts.

The business of direct navigation is dependent on current technologies and user practices. If browser or search technologies were to change significantly, the practice of direct navigation may be altered to our disadvantage.

Some of our existing distribution partners may perceive direct navigation as a competitive threat and therefore may decide to terminate their agreements with us because of our recent acquisitions of a substantial number of Internet domain names.

We intend to apply our technology and expertise to geography-specific Web sites that we believe are under-commercialized and not yet mature from a monetization perspective. However, if the current disparities in traffic and monetization of such search terms do not narrow in a favorable way, we may expend significant company resources on business efforts that do not realize the results we anticipate.

If the acquired assets are not integrated into our business as we anticipate, we may not be able to achieve these benefits or realize the value paid for the asset acquisitions, which could materially harm our business, financial condition and results of operations.

We do not control the means by which users access our direct navigation Web sites, and material changes to current navigation practices or technologies or marketing practices or significant increases in our marketing costs could result in a material adverse effect on our business.

The success of our direct navigation business depends in large part upon consumer access to our direct navigation Web sites. Consumers access our Web sites primarily through the following methods: directly

Table of Contents

accessing our Web sites by typing descriptive keywords or keyword strings into the uniform resource locator (URL) address box of an Internet browser; accessing our Web sites by clicking on bookmarked Web sites; and accessing our Web sites through search engines and directories.

Each of these methods requires the use of a third party product or service, such as an Internet browser or search engine or directory. Internet browsers may provide alternatives to the URL address box to locate Web sites, and search engines may from time to time change and establish rules regarding the indexing and optimization of Web sites. We may also purchase traffic to certain Web sites from search engines as part of our marketing efforts. Historically, we have purchased traffic to certain Web sites from less than five leading search engines. Product developments and market practices for these means of access to our Web sites are not within our control. We may experience a decline in traffic to our Web sites if third party browser technologies or search engine methodologies and rules, including those affecting marketing efforts, are changed to our disadvantage. We may also be forced to significantly increase marketing expenditures in the event that market prices for online advertising and paid-listings escalate. Any of these changes could have a material adverse effect on our business.

We may experience unforeseen liabilities in connection with our acquisitions of Internet domain names, which could negatively impact our financial results.

The Name Development, Pike Street and AreaConnect asset acquisitions involve the acquisition of a large number of previously-owned Internet domain names. Furthermore, we have separately acquired and intend to continue to acquire in the future additional previously-owned Internet domain names. In some cases, these acquired names may have trademark significance that is not readily apparent to us or is not identified by us in the bulk purchasing process. As a result we may face demands by third party trademark owners asserting infringement or dilution of their rights and seeking transfer of acquired Internet domain names under the Uniform Domain Name Dispute Resolution Policy administered by ICANN or actions under the U.S. Anti-Cybersquatting Consumer Protection Act.

We intend to review each claim or demand which may arise from time to time on its merits on a case-by-case basis with the assistance of counsel and we intend to transfer any rights acquired by us to any party that has demonstrated a valid prior right or claim. We cannot, however, guarantee that we will be able to resolve these disputes without litigation. The potential violation of third party intellectual property rights and potential causes of action under consumer protection laws may subject us to unforeseen liabilities including injunctions and judgments for money damages.

Regulation could reduce the value of the Internet domain names acquired or negatively impact the Internet domain acquisition process, which could significantly impair the value attributable to our acquisitions of Internet domain names.

The Name Development business includes the registrations of thousands of Internet domain names both in the United States and internationally. Name Development acquired previously-owned Internet domain names that had expired and had been offered for sale by Internet domain name registrars following the period of permitted reclamation by their prior owners. Furthermore, we have separately acquired and intend to continue to acquire in the future additional previously-owned Internet domain names, including in connection with the Pike Street and AreaConnect asset acquisition. The acquisition of Internet domain names generally is governed by regulatory bodies. The regulation of Internet domain names in the United States and in foreign countries is subject to change. Regulatory bodies could establish additional requirements for previously-owned Internet domain names or modify the requirements for holding Internet domain names. As a result, we might not acquire or maintain names that contribute to our financial results in the same manner as reflected in the historical financial results of Name Development, Pike Street and AreaConnect. Because certain Internet domain names are important assets, a failure to acquire or maintain such Internet domain names could adversely affect our financial results and our growth. Any impairment in the value of these important assets could cause our stock price to decline.

Table of Contents

Risks Relating to Our Business and Our Industry

If we are unable to compete in the highly competitive performance-based advertising and search marketing industries, we may experience reduced demand for our products and services.

We operate in a highly competitive and changing environment. We principally compete with other companies which offer services in six main areas:

sales to merchant advertisers of pay-per-click services;

sales to merchant advertisers of feed management services;

aggregation or optimization of online advertising for distribution through search engines, product shopping engines, directories, Web sites or other outlets;

delivery of online advertising to end users or customers of merchants through destination Web sites or other distribution outlets;

services and outsourcing of technologies that allow merchants to manage their advertising campaigns across multiple networks and track the success of these campaigns; and

third party domain monetization.

Although we currently pursue a strategy that allows us to potentially partner with all relevant companies in the industry, there are certain companies in the industry that may not wish to partner with us. Despite the fact that we currently work with several of our potential competitors, there are no guarantees that these companies will continue to work with us in the future.

We currently or potentially compete with a variety of companies, including Miva (formerly known as FindWhat.com), Google, Microsoft and Yahoo! Many of these actual or perceived competitors also currently or may in the future have business relationships with us, particularly in distribution. Going forward, however, these companies may terminate their relationships with us. Furthermore, our competitors may be able to secure agreements with us on more favorable terms, which could reduce the usage of our services, increase the amount payable to our distribution partners, reduce total revenue and thereby have a material adverse effect on our business, operating results and financial condition.

We expect competition to intensify in the future because current and new competitors can enter our market with little difficulty. The barriers to entering our market are relatively low. In fact, many current Internet and media companies presently have the technical capabilities and advertiser bases to enter the search marketing services industry. Further, if the consolidation trend continues among the larger media and search engine companies with greater brand recognition, the share of the market remaining for smaller search marketing services providers could decrease, even though the number of smaller providers could continue to increase. These factors could adversely affect our competitive position in the search marketing services industry.

Some of our competitors, as well as potential entrants into our market, may be better positioned to succeed in this market. They may have:

longer operating histories;

more management experience;

an employee base with more extensive experience;

better geographic coverage;

larger customer bases;

greater brand recognition; and

significantly greater financial, marketing and other resources.

Table of Contents

Currently, and in the future, as the use of the Internet and other online services increases, there will likely be larger, more well-established and well-financed entities that acquire companies and/or invest in or form joint ventures in categories or countries of interest to us, all of which could adversely impact our business. Any of these trends could increase competition and reduce the demand for any of our services.

If we are not able to respond to the rapid technological change characteristic of our industry, our products and services may cease to be competitive.

The market for our products and services is characterized by rapid change in business models and technological infrastructure, and we will need to constantly adapt to changing markets and technologies to provide new and competitive products and services. If we are unable to ensure that our users, advertisers, and distribution partners have a high-quality experience with our products and services, then they may become dissatisfied and move to competitors' products and services. Accordingly, our future success will depend, in part, upon our ability to develop and offer competitive products and services for both our target market and for applications in new markets. We may not, however, be able to successfully do so, and our competitors may develop innovations that render our products and services obsolete or uncompetitive.

Our technical systems are vulnerable to interruption and damage that may be costly and time-consuming to resolve and may harm our business and reputation.

A disaster could interrupt our services for an indeterminate length of time and severely damage our business, prospects, financial condition and results of operations. Our systems and operations are vulnerable to damage or interruption from:

fire;

floods;

network failure;

hardware failure;

software failure;

power loss;

telecommunications failures;

break-ins;

terrorism, war or sabotage;

computer viruses;

denial of service attacks;

penetration of our network by unauthorized computer users and hackers and other similar events;

natural disaster; and

other unanticipated problems.

We may not have developed or implemented adequate protections or safeguards to overcome any of these events. We also may not have anticipated or addressed many of the potential events that could threaten or undermine our technology network. Any of these occurrences could cause material interruptions or delays in our business, result in the loss of data or render us unable to provide services to our customers. In addition, if a person is able to circumvent our security measures, he or she could destroy or misappropriate valuable information or disrupt our operations. We have deployed firewall hardware intended to thwart hacker attacks. Although we maintain property insurance and business interruption insurance, our insurance may not be adequate to compensate us for all losses that may occur as a result of a catastrophic system failure or other loss, and our insurers may not be able or may decline to do so for a variety of reasons.

Table of Contents

If we fail to address these issues in a timely manner, we may lose the confidence of our merchant advertisers and distribution partners, our revenue may decline and our business could suffer. In addition, as we expand our service offerings and enter into new business areas, we may be required to significantly modify and expand our software and technology platform. If we fail to accomplish these tasks in a timely manner, our business and reputation will likely suffer.

We rely on third party technology, server and hardware providers, and a failure of service by these providers could adversely affect our business and reputation.

We rely upon third party colocation providers to host our main servers. If these providers experience any interruption in operations or cease operations for any reason or if we are unable to agree on satisfactory terms for continued hosting relationships, we would be forced to enter into a relationship with other service providers or assume hosting responsibilities ourselves. If we are forced to switch hosting facilities, we may not be successful in finding an alternative service provider on acceptable terms or in hosting the computer servers ourselves. We may also be limited in our remedies against these providers in the event of a failure of service. In the past, we have experienced short-term outages in the service maintained by one of our current colocation providers. We also rely on third party providers for components of our technology platform, such as hardware and software providers, credit card processors and domain name registrars. A failure or limitation of service or available capacity by any of these third party providers could adversely affect our business and reputation.

We may not be able to protect our intellectual property rights, which could result in our competitors marketing competing products and services utilizing our intellectual property and could adversely affect our competitive position.

Our success and ability to compete effectively are substantially dependent upon our internally developed and acquired technology and data resources, which we protect through a combination of copyright, trade secret, and patent and trademark law. To date, we have filed two provisional patent applications with the United States Patent and Trademark Office, and two non-provisional patent applications based on the two filed provisional applications in the United States and via the Patent Cooperation Treaty designating all member countries. In the future, additional patents may be filed with respect to internally developed or acquired technologies. Our industry is highly competitive and many individuals and companies have sought to patent processes in the industry. In addition, the patent process takes several years and involves considerable expense. Further, patent applications and patent positions in our industry are highly uncertain and involve complex legal and factual questions due in part to the number of competing technologies. As a result, we may not be able to successfully prosecute these patents, in whole or in part, or any additional patent filings that we may make in the future. We also depend on our trade name and domain names. We may not be able to adequately protect our technology and data resources. In addition, intellectual property laws vary from country to country, and it may be more difficult to protect our intellectual property in some foreign jurisdictions in which we may plan to enter. If we fail to obtain and maintain patent or other intellectual property protection for our technology, our competitors could market competing products and services utilizing our technology.

Despite our efforts to protect our proprietary rights, unauthorized parties domestically and internationally may attempt to copy or otherwise obtain and use our services, technology and other intellectual property. We cannot be certain that the steps we have taken will prevent any misappropriation or confusion among consumers and merchant advertisers. If we are unable to protect our intellectual property rights from unauthorized use, our competitive position could be adversely affected.

We may be involved in lawsuits to protect or enforce our patents, which could be expensive and time consuming.

We may initiate patent litigation against third parties to protect or enforce our patent rights, and we may be similarly sued by others. We may also become subject to interference proceedings conducted in the patent and trademark offices of various countries to determine the priority of inventions. The defense and prosecution, if

Table of Contents

necessary, of intellectual property suits, interference proceedings and related legal and administrative proceedings is costly and may divert our technical and management personnel from their normal responsibilities. We may not prevail in any of these suits. An adverse determination of any litigation or defense proceedings could put our patents at risk of being invalidated or interpreted narrowly and could put our patent applications at risk of not being issued.

Furthermore, because of the substantial amount of discovery required in connection with intellectual property litigation, there is a risk that some of our confidential information could be compromised by disclosure during this type of litigation. In addition, during the course of this kind of litigation, there could be public announcements of the results of hearings, motions or other interim proceedings or developments in the litigation. If securities analysts or investors perceive these results to be negative, it could have an adverse effect on the trading price of our Class B common stock and the trading price of our preferred stock.

Our quarterly results of operations might fluctuate due to seasonality, which could adversely affect our growth rate and in turn the market price of our securities.

Our quarterly results have fluctuated in the past and may fluctuate in the future due to seasonal fluctuations in the level of Internet usage. As is typical in our industry, the second and third quarters of the calendar year generally experience relatively lower usage than the first and fourth quarters. It is generally understood that during the spring and summer months of the year, Internet usage is lower than during other times of the year, especially in comparison to the fourth quarter of the calendar year. The extent to which usage may decrease during these off-peak periods is difficult to predict. Prolonged or severe decreases in usage during these periods may adversely affect our growth rate and in turn the market price of our securities.

We are susceptible to general economic conditions, and a downturn in advertising and marketing spending by merchants could adversely affect our operating results.

Our operating results will be subject to fluctuations based on general economic conditions, in particular those conditions that impact merchant-consumer transactions. If there were to be a general economic downturn that affected consumer activity in particular, however slight, then we would expect that business entities, including our merchant advertisers and potential merchant advertisers, could substantially and immediately reduce their advertising and marketing budgets. We believe that during periods of lower consumer activity, merchant spending on advertising and marketing is more likely to be reduced, and more quickly, than many other types of business expenses. These factors could cause a material adverse effect on our operating results.

We depend on the growth of the Internet and Internet infrastructure for our future growth and any decrease or less than anticipated growth in Internet usage could adversely affect our business prospects.

Our future revenue and profits, if any, depend upon the continued widespread use of the Internet as an effective commercial and business medium. Factors which could reduce the widespread use of the Internet include:

possible disruptions or other damage to the Internet or telecommunications infrastructure;

failure of the individual networking infrastructures of our merchant advertisers and distribution partners to alleviate potential overloading and delayed response times;

a decision by merchant advertisers and consumers to spend more of their marketing dollars in offline areas;

increased governmental regulation and taxation; and

actual or perceived lack of security or privacy protection.

Table of Contents

In particular, concerns over the security of transactions conducted on the Internet and the privacy of users, including the risk of identity theft, may inhibit the growth of the Internet and other online services, especially online commerce. In order for the online commerce market to develop successfully, we and other market participants must be able to transmit confidential information, including credit card information, securely over public networks. Any decrease or less than anticipated growth in Internet usage could have a material adverse effect on our business prospects.

We are exposed to risks associated with credit card fraud and credit payment, and we may continue to suffer losses as a result of fraudulent data or payment failure by merchant advertisers.

We have suffered losses and may continue to suffer losses as a result of payments made with fraudulent credit card data. Our failure to control fraudulent credit card transactions adequately could reduce our net revenue and gross margin and negatively impact our standing with applicable credit card authorization agencies. In addition, under limited circumstances, we extend credit to merchant advertisers who may default on their accounts payable to us or fraudulently charge-back amounts on their credit cards for services that have already been delivered by us.

Government regulation of the Internet may adversely affect our business and operating results.

Companies engaging in online search, commerce and related businesses face uncertainty related to future government regulation of the Internet through the application of new or existing federal, state and international laws. Due to the rapid growth and widespread use of the Internet, legislatures at the federal and state levels have enacted and are considering various laws and regulations relating to the Internet. Individual states may also enact stricter consumer legislation that affects the conduct of our business.

Furthermore, the application of existing laws and regulations to Internet companies remains somewhat unclear. For example, as a result of the actions of merchant advertisers in our network, we may be subject to the application of existing laws and regulations relating to a wide variety of issues such as privacy, gambling, sweepstakes, promotions, financial market regulation, and intellectual property ownership and infringement. In addition, existing laws that regulate or require licenses or permits for certain businesses of merchant advertisers may be unclear in their application to our business, including those related to insurance and securities brokerage, law offices and pharmacies. Our business may be negatively affected by a variety of new or existing laws and regulations, which may expose us to substantial compliance costs and liabilities and may impede the growth in use of the Internet. The application of these statutes and others to the Internet search industry is not entirely settled. Further, several existing and proposed federal laws could have an impact on our business. The existing federal laws include, among others:

The Digital Millennium Copyright Act and its related safe harbors are intended to reduce the liability of online service providers for listing or linking to third-party Web sites that include materials that infringe copyrights or other rights of others.

The Children's Online Protection Act and the Children's Online Privacy Protection Act are intended to restrict the distribution of certain materials deemed harmful to children, and they impose additional restrictions on the ability of online services to collect user information from minors.

The Protection of Children from Sexual Predators Act of 1998 requires online service providers to report evidence of violations of federal child pornography laws under certain circumstances.

The CAN-SPAM Act of 2003 and certain state laws are intended to impose limitations and penalties on the transmission of unsolicited commercial electronic mail via the Internet.

The Electronic Communications Privacy Act is intended to protect the privacy of e-mail and other electronic communications.

The Computer Fraud and Abuse Act and certain federal and state laws are intended to protect computer users from acts which may be viewed as a violation of privacy.

Table of Contents

Courts may apply each of these laws in unintended and unexpected ways. As a company that provides services over the Internet, we may be subject to an action brought under any of these or future laws governing online services. Among the types of legislation currently being considered at the federal and state levels are consumer laws regulating the practices for software applications or downloads and the use of cookies and these laws may introduce requirements for user consent and other restrictions. These proposed laws are intended to target applications often referred to as spyware, invasiveware or adware, although the scope may also include some software applications currently used in the online advertising industry to serve and distribute advertisements.

Many of the services of the Internet are automated, and companies such as ours may be unknowing conduits for illegal or prohibited materials. It is not known how courts will rule in many circumstances; for example, it is possible that courts could find strict liability or impose know your customer standards of conduct in some circumstances. Although we may not be directly involved in any of these practices, under current and future regulation we may ultimately be held responsible for the actions of our merchant advertisers or distribution partners.

We may also be subject to costs and liabilities with respect to privacy issues. Several Internet companies have incurred costs and paid penalties for violating their privacy policies. In addition, several states have adopted legislation that requires businesses to implement and maintain reasonable security procedures and practices to protect sensitive personal information and to provide notice to consumers of unauthorized access to computerized sensitive personal information. Further, it is anticipated that new legislation will be adopted by federal and state governments with respect to user privacy. Such legislation could negatively affect our business.

Additionally, foreign governments may pass laws which could negatively impact our business and/or may prosecute us for our products and services based upon existing laws. Any such prosecution or costs incurred in addressing foreign laws could negatively affect our business.

The restrictions imposed by, and cost of complying with, current and possible future laws and regulations related to our business could harm our business and operating results.

Future regulation of search engines may adversely affect the commercial utility of our search marketing services.

The Federal Trade Commission, or FTC, has recently reviewed the way in which search engines disclose paid placements or paid inclusion practices to Internet users. In 2002, the FTC issued guidance recommending that all search engine companies ensure that all paid search results are clearly distinguished from non-paid results, that the use of paid inclusion is clearly and conspicuously explained and disclosed and that other disclosures are made to avoid misleading users about the possible effects of paid placement or paid inclusion listings on search results. Such disclosures if ultimately mandated by the FTC or voluntarily made by us may reduce the desirability of our paid placement and paid inclusion services. We believe that some users will conclude that paid search results are not subject to the same relevancy requirements as non-paid search results, and will view paid search results less favorably. If such FTC disclosure reduces the desirability of our paid placement and paid inclusion services, and click-throughs of our paid search results decrease, our business could be adversely affected.

State and local governments may in the future be permitted to levy additional taxes on Internet access and electronic commerce transactions, which could result in a decrease in the level of usage of our services. In addition, we may be required to pay additional income, sales, or other taxes.

On November 19, 2004, the federal government passed legislation placing a three-year ban on state and local governments' imposition of new taxes on Internet access or electronic commerce transactions. Unless the ban is extended, state and local governments may begin to levy additional taxes on Internet access and electronic

Table of Contents

commerce transactions upon the legislation's expiration in November 2007. An increase in taxes may make electronic commerce transactions less attractive for merchants and businesses, which could result in a decrease in the level of usage of our services. Additionally, from time to time, various state, federal and other jurisdictional tax authorities undertake reviews of the Company and the Company's filings. In evaluating the exposure associated with various tax filing positions, the Company on occasion accrues charges for probable exposures. We cannot predict the outcome of any of these reviews.

Risks Relating to our Common Stock and Preferred Stock

Our Class B common stock and preferred stock prices have been and are likely to continue to be highly volatile.

The trading prices of our Class B common stock and preferred stock have been and are likely to continue to be highly volatile and subject to wide fluctuations. Since our initial public offering, the closing sale price of our Class B common stock on the Nasdaq National Market ranged from \$8.56 to \$25.66 per share through December 31, 2005. Since our February 2005 follow-on offering, the closing sale price of our preferred stock on the Nasdaq National Market ranged from \$164.00 to \$267.00 per share through December 31, 2005. Our stock prices may fluctuate in response to a number of events and factors, which may be the result of our business strategy or events beyond our control, including:

developments concerning proprietary rights, including patents, by us or a competitor;

announcements by us or our competitors of significant contracts, acquisitions, financings, commercial relationships, joint ventures or capital commitments;

registration of additional shares of Class B common stock in connection with acquisitions;

actual or anticipated fluctuations in our operating results;

developments concerning our various strategic collaborations;

lawsuits initiated against us or lawsuits initiated by us;

announcements of acquisitions or technical innovations;

potential loss or reduced contributions from distribution partners or merchant advertisers;

changes in earnings estimates or recommendations by analysts;

changes in the market valuations of similar companies;

changes in our industry and the overall economic environment;

Edgar Filing: MARCHEX INC - Form 424B3

volume of shares of Class B common stock available for public sale, including on conversion of Class A common stock and preferred stock or upon exercise of stock options;

sales of stock by us or by our stockholders, including sales by certain of our executive officers and directors pursuant to written pre-determined selling plans under Rule 10b5-1 of the Securities Exchange Act of 1934; and

short sales, hedging and other derivative transactions on shares of our Class B common stock and preferred stock.

In addition, the stock market in general, and the Nasdaq National Market and the market for online commerce companies in particular, have experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of the listed companies. These broad market and industry factors may seriously harm the market price of our Class B common stock and preferred stock, regardless of our operating performance. In the past, following periods of volatility in the market, securities class action litigation has often been instituted against these companies. Litigation against us, whether or not judgment is entered against us, could

Table of Contents

result in substantial costs and potentially economic loss, and a diversion of our management's attention and resources, any of which could seriously harm our financial condition. Additionally, there can be no assurance that an active trading market of our Class B common stock and preferred stock will be sustained.

Because our shares of the preferred stock are convertible into shares of Class B common stock, volatility or depressed prices for our Class B common stock could have a similar effect on the value of the preferred stock. Holders who receive Class B common stock upon conversion also will be subject to the risk of volatility and depressed prices of our Class B common stock.

Our founding executive officers control the outcome of stockholder voting, and there may be an adverse effect on the price of our Class B common stock due to the disparate voting rights of our Class A common stock and our Class B common stock.

As of December 31, 2005, Russell C. Horowitz, Ethan A. Caldwell, Peter Christothoulou and John Keister, our founding executive officers, beneficially owned 96% of the outstanding shares of our Class A common stock, which shares represented 88% of the combined voting power of all outstanding shares of our capital stock. These founding executive officers together control 89% of the combined voting power of all outstanding shares of our capital stock excluding shares of Class B common stock issuable upon conversion of the preferred stock. The holders of our Class A common stock and Class B common stock have identical rights except that the holders of our Class B common stock are entitled to one vote per share, while holders of our Class A common stock are entitled to twenty-five votes per share on all matters to be voted on by stockholders. This concentration of control could be disadvantageous to our other stockholders with interests different from those of these founding executive officers. This difference in the voting rights of our Class A common stock and Class B common stock could adversely affect the price of our Class B common stock to the extent that investors or any potential future purchaser of our shares of Class B common stock give greater value to the superior voting rights of our Class A common stock.

Further, as long as these founding executive officers have a controlling interest, they will continue to be able to elect all or a majority of our board of directors and generally be able to determine the outcome of all corporate actions requiring stockholder approval. As a result, these founding executive officers will be in a position to continue to control all fundamental matters affecting our company, including any merger involving, sale of substantially all of the assets of, or change in control of, our company. The ability of these founding executive officers to control our company may result in our Class B common stock and preferred stock trading at a price lower than the price at which such stock would trade if these founding executive officers did not have a controlling interest in us. This control may deter or prevent a third party from acquiring us which could adversely affect the market price of our Class B common stock and preferred stock.

Anti-takeover provisions may limit the ability of another party to acquire us, which could cause our stock price to decline.

Our certificate of incorporation, as amended, our by-laws and Delaware law contain provisions that could discourage, delay or prevent a third party from acquiring us, even if doing so may be beneficial to our stockholders. In addition, these provisions could limit the price investors would be willing to pay in the future for shares of our Class B common stock and preferred stock. The following are examples of such provisions in our certificate of incorporation, as amended, or our by-laws:

the authorized number of our directors can be changed only by a resolution of our board of directors;

advance notice is required for proposals that can be acted upon at stockholder meetings;
