ITEM 5. Other Events

On February 8, 2002 the Company issued the following press release.

Puget Energy reports 2001 results

Bellevue, Wash. (Feb. 8, 2002)-- Puget Energy (NYSE: PSD) today reported 2001 income for common stock of \$98.4 million, or \$1.14 per diluted share, compared with \$184.8 million, or \$2.16 per diluted share, in 2000. Twelve-month results for 2001 include the cumulative effect of an accounting change of a charge to earnings of 17 cents per diluted share in the first quarter related to the adoption of Statement of Financial Accounting Standards No. 133, "Accounting for Derivative Instruments and Hedging Activities" ("SFAS 133").

Fourth-quarter income for common stock for the period ended Dec. 31, 2001 was \$6.2 million, or 7 cents per diluted share, compared to income of \$67.0 million, or 78 cents per diluted share for the fourth quarter of 2000.

"Clearly, 2001 was a year of contrasts. Operationally, we saw extraordinary successes in expanding customer convenience and choice through our Personal Energy Management(TM) program and in managing through one of the worst hydroelectric production seasons on record, all while keeping our distribution operating costs among the lowest in the nation," said Stephen P. Reynolds, president and CEO of Puget Energy. "Financially, continued under-recovery of net power costs beginning in the last half of 2001 produced very disappointing results," he added.

Reynolds said financial results in 2002 and beyond will depend on the satisfactory outcome of two rate-relief requests the company's Puget Sound Energy utility subsidiary has filed with the Washington Utilities and Transportation Commission. The utility has filed for increases in general rates for both its electric and natural gas service. A decision is expected in that filing no later than the end of October 2002. Puget Sound Energy also has requested to temporarily raise electric rates for the March through October 2002 period to recover higher net power costs that resulted from circumstances related to wholesale energy market conditions in the Pacific Northwest.

"In a year that proved to be extremely challenging for energy utilities in our region, Puget Sound Energy carefully managed its electric supply resources in 2001, enabling it to be one of the last Northwest utilities to seek an electric-rate increase," said Reynolds. "Despite tremendous price volatility in energy markets over the past several years, the rates PSE customers pay today are virtually unchanged since the beginning of 1997, when our company was created," added Reynolds. "And with respect to general rates, our utility has not had to ask for a general electricity rate increase since 1993 and a general natural gas increase since 1995.

"Our interim-rate request for \$170 million to recover net power costs in excess of those built into our rates is one of the smallest increases among Western utilities, most of which have raised rates as a result of the Western energy crisis," he added. "Achieving a workable regulatory outcome is critical to strengthening the fiscal stability of the company and continuing to provide our customers with reliable, low-cost energy delivery while supporting our Washington state economy with a sound utility infrastructure."

Among the highlights in 2001, Reynolds noted:

- Working with the Washington Utilities and Transportation Commission, Puget Sound Energy expanded its Personal Energy Management program to more than 300,000 residential and commercial electric customers. This program, unprecedented in scope, provides customers with real-time information to better understand and control their energy usage, and coupled with time-of-day pricing, gives customers the opportunity to save money by shifting usage to off-peak periods.
- In collaboration with the Bonneville Power Administration, Puget Sound Energy entered into a new, five-year residential and small farm power credit contract, allowing the company to increase by more than 50 percent the credit on customers' bills from that program over the five-year term, beginning in 2002.
- Puget Sound Energy continued to deliver electric and natural gas service at reliability levels far above industry averages while distribution costs remain among the lowest in the country: \$161 per customer compared to the industry average of \$272 for combination utilities.
- The company earned recognition from President George W. Bush and received the industry's highest honors—the Edison Electric Institute's prestigious Edison Award, and Utility of the Year designation by *Electric Light and Power* magazine—for using investments in new technologies to the benefit of consumers and the environment.
- InfrastruX Group, the company's non-regulated utilities-service subsidiary, continued to successfully grow its business and capabilities through acquisitions. With its acquisitions completed through December 31, 2001, InfrastruX has annualized revenues of approximately \$240 million, and has built strong regional positions on the East Coast, in the Midwest and Mid-South.

FACTORS IN ANNUAL RESULTS

Operating revenues for the 12-month period were \$3.37 billion, compared to \$3.44 billion for the same period in 2000.

While overall total operating expenses were essentially flat compared to the previous year, electric margins were down substantially, primarily as a result of the continued under-recovery of net power costs. Utility operations and maintenance expenses for the 12-month period reflect increased costs related to electric-service restoration costs in the fourth quarter of 2001, the Personal Energy Management program, generation-related operating and maintenance costs and budgeted increases in non-production operations and maintenance costs.

FACTORS IN FOURTH-QUARTER RESULTS

Operating revenues for the three-month period ended Dec. 31, 2001 were \$699 million, down from \$1.28 billion from a year ago. The decline in revenues is primarily due to reduced revenues from sales to industrial customers and wholesale sales of surplus electricity as a result of a decline in both market prices and volumes.

As in the factors affecting annual results, electric margins were down substantially, primarily as a result of the continued under-recovery of net power costs. Utility operations and maintenance expenses in the fourth quarter of 2001 increased over the prior year primarily due to the same factors affecting annual results.

FOURTH-QUARTER EARNINGS ANALYST TELECONFERENCE.

A conference call for analysts to discuss with management the fourth quarter and 2001 results and the outlook for future performance is scheduled at 10 a.m. EST (7 a.m. PST) Friday, Feb. 8, 2002. The call will be broadcast live through a Web cast at WWW.PSE.COM by accessing the Investors section of the Web site. The Web cast will be archived and available for replay following the live call.
