The Markets in Review

## Dear Shareholder,

Market volatility, while remaining below the long-term average level, increased over the course of 2014 and into 2015, driven largely by higher valuations in risk assets (such as equities and high yield bonds), geopolitical risks, uneven global economic growth and uncertainty around policy moves from the world s largest central banks. As the U.S. Federal Reserve (the Fed ) gradually reduced its bond buying program (which ultimately ended in October 2014), U.S. interest rates surprisingly trended lower during the period.

The first half of 2014 was generally a strong period for most asset classes; however, volatility ticked up in the summer as geopolitical tensions intensified in Ukraine and the Middle East and investors feared that better U.S. economic indicators may compel the Fed to increase short-term interest rates sooner than previously anticipated. Global credit markets tightened as the U.S. dollar strengthened versus other currencies, ultimately putting a strain on investor flows, and financial markets broadly weakened in the third quarter.

Several themes dominated the markets in the fourth quarter that resulted in the strong performance of U.S. markets versus other areas of the world. Economic growth strengthened considerably in the United States while the broader global economy showed signs of slowing. The European Central Bank and the Bank of Japan took aggressive measures to stimulate growth while the Fed moved toward tighter policy, causing further strengthening in the U.S. dollar. Fixed income investors piled into U.S. Treasuries where yields remained persistently low, but were comparatively higher than yields on international sovereign debt, while equity investors favored the relative stability of U.S.-based companies amid rising global risks.

Oil prices, which had been gradually declining since mid-summer, plummeted in the fourth quarter due to a global supply-and-demand imbalance. Energy-related assets sold off sharply and emerging markets struggled as many of those economies rely heavily on oil exports. Conversely, the consumer sectors benefited from lower oil prices as savings at the gas pumps freed up discretionary income for other goods and services.

These trends shifted in early 2015. U.S. equities underperformed international markets given high valuations and the anticipation of a rate hike from the Fed. Oil prices showed signs of stabilizing as suppliers became more disciplined in their exploration and production efforts. Markets in Europe and Japan rebounded, driven largely by central bank policy accommodation and improving economic data.

At BlackRock, we believe investors need to think globally, extend their scope across a broad array of asset classes and be prepared to move freely as market conditions change over time. We encourage you to talk with your financial advisor and visit **blackrock.com** for further insight about investing in today s markets.

Sincerely,

Rob Kapito President, BlackRock Advisors, LLC

Trust Summary as of February 28, 2015 **Trust Overview** 

#### BlackRock Core Bond Trust

**BlackRock Core Bond Trust s (BHK) (the Trust**) investment objective is to provide current income and capital appreciation. The Trust seeks to achieve its investment objective by investing at least 75% of its assets in bonds that are investment grade quality at the time of investment. The Trust s investments will include a broad range of bonds, including corporate bonds, U.S. government and agency securities and mortgage-related securities. The Trust may invest directly in such securities or synthetically through the use of derivatives.

On June 6, 2014, the Boards of the Trust, BlackRock Income Opportunity Trust, Inc. (BNA) and BlackRock Income Trust, Inc. (BKT) approved the reorganizations of BKT and BNA into the Trust, with the Trust continuing as the surviving fund after the reorganizations. At a special meeting of shareholders on September 30, 2014, the shareholders of the Trust and BNA approved the reorganization of BNA into the Trust, which was completed on November 10, 2014. The reorganization of BKT into the Trust was not approved by BKT shareholders.

No assurance can be given that the Trust s investment objective will be achieved.

**Portfolio Management Commentary** 

#### How did the Trust perform?

For the six-month period ended February 28, 2015, the Trust returned 5.79% based on market price and 4.37% based on NAV. For the same period, the closed-end Lipper Corporate BBB-Rated Debt Funds (Leveraged) category posted an average return of 1.34% based on market price and 0.78% based on NAV. All returns reflect reinvestment of dividends. The Trust s discount to NAV, which narrowed during the period, accounts for the difference between performance based on price and performance based on NAV. The following discussion relates to performance based on NAV.

#### What factors influenced performance?

The main contributors to the Trust s performance were its exposure to investment grade corporate credit, particularly within industrials and financials, U.S. Treasuries and high yield and supra-sovereign securities (supranational entities formed by two or more central governments to promote economic development for the member countries). Other contributors included non-U.S. dollar exposure and positions in commercial mortgage-backed securities (CMBS), agency mortgage-backed securities (MBS) 30-year pass-throughs and asset-backed securities (ABS).

There were no material detractors from performance during the period. **Describe recent portfolio activity.** 

For the most part, the Trust s allocations remained consistent throughout the six-month period, with its largest positions in investment grade and high yield corporate credit, followed by allocations in securitized credits, specifically ABS and CMBS. The largest position change came in form of increasing the Trust s exposure to U.S. Treasuries.

#### Describe portfolio positioning at period end.

At period end, the Trust maintained diversified exposure to mainly non-government spread sectors, including investment grade credit, high yield credit, CMBS, ABS and non-agency residential MBS. The Trust also held exposure to government-related sectors including U.S. Treasury securities, agency debt and agency MBS. The Trust ended the period with a long duration profile.

The views expressed reflect the opinions of BlackRock as of the date of this report and are subject to change based on changes in market, economic or other conditions. <sup>8</sup> The investment advisor evaluates the credit quality of not-rated investments based upon certain factors including, but not limited to, credit ratings for similar investments and financial analysis of sectors and individual investments. Using this approach, the investment advisor has deemed U.S. Government Sponsored Agency Securities and U.S. Treasury Obligations as AAA/Aaa.

SEMI-ANNUAL REPORT FEBRUARY 28, 2015 5

Trust Summary as of February 28, 2015 **Trust Overview**  BlackRock Corporate High Yield Fund, Inc.

BlackRock Corporate High Yield Fund, Inc. s (HYT) (the Trust) primary investment objective is to provide shareholders with current income. The Trust s secondary investment objective is to provide shareholders with capital appreciation. The Trust seeks to achieve its objectives by investing, under normal market conditions, at least 80% of its assets in domestic and foreign high yield securities, including high yield bonds (commonly referred to as junk bonds), corporate loans, convertible debt securities and preferred securities which are below investment grade quality. The Trust may invest directly in such securities or synthetically through the use of derivatives.

No assurance can be given that the Trust s investment objectives will be achieved.

**Portfolio Management Commentary** 

#### How did the Trust perform?

For the six-month period ended February 28, 2015, the Trust returned 0.11% based on market price and (0.17)% based on NAV. For the same period, the closed-end Lipper High Yield Funds (Leveraged) category posted an average return of (2.46)% based on market price and (1.60)% based on NAV. All returns reflect reinvestment of dividends. The Trust s discount to NAV, which narrowed during the period, accounts for the difference between performance based on price and performance based on NAV. The following discussion relates to performance based on NAV.

#### What factors influenced performance?

The high yield market was essentially flat for the full six months, declining through December before recovering its losses late in the period. However, the Trust s allocation to floating-rate high yield loans contributed positively to performance, as that segment rose modestly near the end of the period. Exposure to the equity of high yield companies detracted from returns.

The Trust s exposure to the energy sector was the leading detractor as the price of oil finished the period significantly lower, from about \$100 a barrel at the beginning to about \$50 a barrel at the end. This led to declines in energy-related high-yield issues. Holdings within metals & mining also detracted as those commodities also came under pressure in the face of slower growth prospects. The Trust s use of leverage acted to magnify losses in both sectors.

The Trust s most commonly used derivative strategy is to utilize short positions in equity futures in order to reduce overall risk in the portfolio and manage the volatility of its equity holdings. Those positions detracted given the positive performance of the overall equity market during the period.

#### Describe recent portfolio activity.

During the period, the Trust reduced risk modestly in the portfolio, based on the view that the market is likely to see increased volatility, making its overall risk-return profile less attractive. The Trust also modestly reduced its equity holdings and increased the size of its equity futures. In addition, the Trust increased its holdings in more liquid high yield positions, such as its allocation to high yield index ETFs.

#### Describe portfolio positioning at period end.

At period end, the Trust held the majority of its total portfolio in corporate bonds, with the next significant allocation being in floating rate loan interests (bank loans), and a modest percentage in common stocks. The remainder was invested in preferred stocks and other interests. The Trust was broadly diversified with holdings in more than 450 companies, while the top 25 highest conviction holdings represented about one-quarter of overall portfolio assets.

The views expressed reflect the opinions of BlackRock as of the date of this report and are subject to change based on changes in market, economic or other conditions. These views are not intended to be a forecast of future events and are no guarantee of future results. 6SEMI-ANNUAL REPORT FEBRUARY 28, 2015

SEMI-ANNUAL REPORT FEBRUARY 28, 2015 7

Trust Summary as of February 28, 2015

**BlackRock Income Trust, Inc.** 

## **Trust Overview**

**BlackRock Income Trust, Inc.** s (**BKT**) (the Trust ) investment objective is to manage a portfolio of high-quality securities to achieve both preservation of capital and high monthly income. The Trust seeks to achieve its investment objective by investing at least 65% of its assets in mortgage-backed securities. The Trust invests at least 80% of its assets in securities that are (i) issued or guaranteed by the U.S. government or one of its agencies or instrumentalities or (ii) rated at the time of investment either AAA by S&P or Aaa by Moody s. The Trust may invest directly in such securities or synthetically through the use of derivatives.

On June 6, 2014, the Boards of the Trust, BlackRock Income Opportunity Trust, Inc. (BNA) and BlackRock Core Bond Trust (BHK) approved the reorganizations of the Trust and BNA into BHK, with BHK continuing as the surviving fund after the reorganizations. At a special meeting of shareholders on September 30, 2014, the reorganization of the Trust into BHK was not approved by BKT shareholders.

No assurance can be given that the Trust s investment objective will be achieved.

#### Portfolio Management Commentary

#### How did the Trust perform?

For the six-month period ended February 28, 2015, the Trust returned 3.31% based on market price and 1.88% based on NAV. For the same period, the closed-end Lipper US Mortgage Funds category posted an average return of 1.53% based on market price and 1.58% based on NAV. All returns reflect reinvestment of dividends. The Trust s discount to NAV, which narrowed during the period, accounts for the difference between performance based on price and performance based on NAV. The following discussion relates to performance based on NAV. **What factors influenced performance?** 

The Trust s exposure to agency collateralized mortgage obligations (CMOs) and U.S. agency debt contributed positively to performance. The Trust continued to benefit from exposure to Alt-A (riskier than prime, but less risky than subprime) and prime non-agency residential mortgage-backed securities (MBS), as well as commercial mortgage-backed securities (CMBS).

The Trust s duration positioning, as well as its exposure to agency MBS, detracted from performance. The Trust uses interest rate derivatives, including futures and swaps, mainly for the purpose of managing duration, convexity (the rate at which duration changes in response to interest rate movements) and yield curve positioning. During the period, the Trust held short positions on U.S. Treasuries in order to manage the duration profile of the portfolio. These positions were beneficial to the Trust s performance during certain periods of rising interest rates. However, for the period as a whole, the Trust s derivatives holdings had a negative impact on returns.

#### Describe recent portfolio activity.

During the six-month period, the Trust marginally decreased overall exposure to agency MBS, with most of the reduction coming from the allocation to 30-year pass-throughs. The Trust also retained its selective allocations in asset-backed securities, CMBS and non-agency MBS based on a increasing yields and continued improvement in underlying fundamentals.

## Describe portfolio positioning at period end.

At period end, the Trust maintained exposure to high quality agency MBS with varying maturities and coupon rates. The Trust continued to be overweight agency CMOs while holding an underweight to 15- and 30-year agency pass-throughs. The Trust continued to hold small allocations in non-agency MBS and CMBS. The Trust also maintained a relatively neutral duration compared with the benchmark.

The views expressed reflect the opinions of BlackRock as of the date of this report and are subject to change based on changes in market, economic or other conditions. These views are not intended to be a forecast of future events and are no guarantee of future results. 8SEMI-ANNUAL REPORT FEBRUARY 28, 2015

SEMI-ANNUAL REPORT FEBRUARY 28, 2015 9

The Benefits and Risks of Leveraging

The Trusts may utilize leverage to seek to enhance the yield and net asset value ( NAV ) of their common shares ( Common Shares ). However, these objectives cannot be achieved in all interest rate environments.

In general, the concept of leveraging is based on the premise that the financing cost of leverage, which will be based on short-term interest rates, will normally be lower than the income earned by a Trust on its longer-term portfolio investments purchased with the proceeds from leverage. To the extent that the total assets of the Trust (including the assets obtained from leverage) are invested in higher-yielding portfolio investments, the Trust s shareholders will benefit from the incremental net income. The interest earned on securities purchased with the proceeds from leverage is paid to shareholders in the form of dividends, and the value of these portfolio holdings is reflected in the per share NAV.

To illustrate these concepts, assume a Trust s Common Shares capitalization is \$100 million and it utilizes leverage for an additional \$30 million, creating a total value of \$130 million available for investment in longer-term income securities. If prevailing short-term interest rates are 3% and longer-term interest rates are 6%, the yield curve has a strongly positive slope. In this case, the Trust s financing costs on the \$30 million of proceeds obtained from leverage are based on the lower short-term interest rates. At the same time, the securities purchased by the Trust with the proceeds from leverage earn income based on longer-term interest rates. In this case, the Trust s costs of leverage are significantly lower than the income earned on the Trust s longer-term investments acquired from leverage proceeds, and therefore the holders of Common Shares (Common Shareholders) are the beneficiaries of the incremental net income.

However, in order to benefit Common Shareholders, the return on assets purchased with leverage proceeds must exceed the ongoing costs associated with the leverage. If interest and other costs of leverage exceed the Trust s return on assets purchased with leverage proceeds, income to shareholders will be lower than if the Trust had not used leverage. Furthermore, the value of the Trust s portfolio investments generally varies inversely with the direction of long-term interest rates, although other factors can influence the value of portfolio investments. In contrast, the

value of the Trust s obligations under its leverage arrangement generally does not fluctuate in relation to interest rates. As a result, changes in interest rates can influence the Trust s NAVs positively or negatively. Changes in the future direction of interest rates are very difficult to predict accurately, and there is no assurance that a Trust s intended leveraging strategy will be successful.

Leverage also will generally cause greater changes in the Trusts NAVs, market prices and dividend rates than comparable portfolios without leverage. In a declining market, leverage is likely to cause a greater decline in the net asset value and market price of a Trust s Common Shares than if the Trust were not leveraged. In addition, the Trust may be required to sell portfolio securities at inopportune times or at distressed values in order to comply with regulatory requirements applicable to the use of leverage or as required by the terms of leverage instruments, which may cause the Trust to incur losses. The use of leverage may limit the Trust s ability to invest in certain types of securities or use certain types of hedging strategies. The Trust will incur expenses in connection with the use of leverage, all of which are borne by Common Shareholders and may reduce income to the Common Shares.

Each Trust may utilize leverage through a credit facility or reverse repurchase agreements as described in the Notes to Financial Statements.

Under the Investment Company Act of 1940, as amended (the 1940 Act ), the Trust is permitted to issue debt up to 3% of its total managed assets. A Trust may voluntarily elect to limit its leverage to less than the maximum amount permitted under the 1940 Act. In addition, a Trust may also be subject to certain asset coverage, leverage or portfolio composition requirements imposed by its credit facility, which may be more stringent than those imposed by the 1940 Act.

If a Trust segregates or designates on its books and records cash or liquid assets having values not less than the value of the Trust s obligations under the reverse repurchase agreement (including accrued interest), then such transaction will not be considered a senior security and will not be subject to the foregoing limitations and requirements under the 1940 Act.

Derivative Financial Instruments

The Trusts may invest in various derivative financial instruments. Derivative financial instruments are used to obtain exposure to a security, index and/or market without owning or taking physical custody of securities or to manage commodity, market, equity, credit, interest rate, foreign currency exchange rate and/or other risks. Derivative financial instruments may give rise to a form of economic leverage. Derivative financial instruments also involve risks, including the imperfect correlation between the value of a derivative financial instrument and the underlying asset, possible default of the counterparty to the transaction or illiquidity of the derivative

financial instrument. The Trusts ability to use a derivative financial instrument successfully depends on the investment advisor s ability to predict pertinent market movements accurately, which cannot be assured. The use of derivative financial instruments may result in losses greater than if they had not been used, may limit the amount of appreciation a Trust can realize on an investment and/or may result in lower distributions paid to shareholders and, investment that it might otherwise sell. The Trusts investments in these instruments are discussed in detail in the Notes to Financial Statements.
