NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS Unaudited

Note 1: Basis of Presentation

We prepared our interim consolidated condensed financial statements that accompany these notes in conformity with U.S. generally accepted accounting principles, consistent in all material respects with those applied in our Annual Report on Form 10-K for the year ended December 29, 2007. We have made estimates and judgments affecting the amounts reported in our consolidated condensed financial statements and the accompanying notes. Our actual results may differ materially from these estimates. The accounting estimates that require our most significant, difficult, and subjective judgments include:

- the valuation of non-marketable equity investments;
- the assessment of recoverability of long-lived assets;
- the recognition and measurement of current and deferred income taxes (including the measurement of uncertain tax positions);
- the valuation of inventory; and
- the valuation and recognition of share-based compensation.

In accordance with the adoption of Statement of Financial Accounting Standards (SFAS) No. 159, *The Fair Value Option for Financial Assets and Financial Liabilities Including an amendment of FASB Statement No. 115* (SFAS No. 159), cash flows from certain trading assets have been classified as cash flows from investing activities beginning in the first quarter of 2008. See *Note 2: Recent Accounting Pronouncements and Accounting Changes* for further discussion.

The interim financial information is unaudited, but reflects all normal adjustments that are, in our opinion, necessary to provide a fair statement of results for the interim periods presented. This interim information should be read in conjunction with the consolidated financial statements in our Annual Report on Form 10-K for the year ended December 29, 2007.

Note 2: Recent Accounting Pronouncements and Accounting Changes

In the first quarter of 2008, we adopted SFAS No. 157 *Fair Value Measurements* (SFAS No. 157) for all financial assets and financial liabilities and for all non-financial assets and non-financial liabilities recognized or disclosed at fair value in the financial statements on a recurring basis (at least annually). SFAS No. 157 defines fair value, establishes a framework for measuring fair value, and enhances fair value measurement disclosure. The adoption of SFAS No. 157 did not have a significant impact on our consolidated financial statements, and the resulting fair values calculated under SFAS No. 157 after adoption were not significantly different than the fair values that would have been calculated under previous guidance. See *Note 3: Fair Value* for further details on our fair value measurements. In February 2008, the Financial Accounting Standards Board (FASB) issued FASB Staff Position (FSP) 157-1,

Application of FASB Statement No. 157 to FASB Statement No. 13 and Other Accounting Pronouncements That Address Fair Value Measurements for Purposes of Lease Classification or Measurement under Statement 13 (FSP 157-1) and FSP 157-2, *Effective Date of FASB Statement No. 157* (FSP 157-2). FSP 157-1 amends SFAS No. 157 to remove certain leasing transactions from its scope. FSP 157-2 delays the effective date of SFAS No. 157 for all non-financial assets and non-financial liabilities, except for items that are recognized or disclosed at fair value in the financial statements on a recurring basis (at least annually), until the beginning of the first quarter of fiscal 2009. We are currently evaluating the impact that SFAS No. 157 will have on our consolidated financial statements when it is applied to non-financial assets and non-financial liabilities that are not measured at fair value on a recurring basis beginning in the first quarter of 2009.

In the first quarter of 2008, we adopted SFAS No. 159. SFAS No. 159 permits companies to choose to measure certain financial instruments and other items at fair value using an instrument-by-instrument election. The standard requires that unrealized gains and losses are reported in earnings for items measured using the fair value option. See *Note 3: Fair Value* for further discussion.

SFAS No. 159 also requires cash flows from purchases, sales, and maturities of trading securities to be classified based on the nature and purpose for which the securities were acquired. We assessed the nature and purpose of our trading assets and determined that our marketable debt instruments will be classified on the statement of cash flows as

investing activity. Our equity instruments offsetting deferred compensation will continue to be classified as operating activity as they are maintained to offset changes in liabilities related to the equity market risk of certain deferred compensation arrangements. SFAS No. 159 does not allow for retrospective application to periods prior to fiscal year 2008, therefore all trading asset activity for prior periods will continue to be presented as operating activities.

INTEL CORPORATION**NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS Unaudited (Continued)**

Staff Accounting Bulletin 110 (SAB 110) issued by the U.S. Securities and Exchange Commission (SEC) was effective for us beginning in the first quarter of 2008. SAB 110 amends the SEC's views discussed in Staff Accounting Bulletin 107 (SAB 107) regarding the use of the simplified method in developing estimates of the expected lives of share options in accordance with SFAS No. 123 (revised 2004), Share-Based Payment (SFAS No. 123(R)). We will continue to use the simplified method until we have the historical data necessary to provide reasonable estimates of expected lives in accordance with SAB 107, as amended by SAB 110.

In December 2007, the FASB issued SFAS No. 141 (revised 2007), Business Combinations (SFAS No. 141(R)). Under SFAS No. 141(R), an entity is required to recognize the assets acquired, liabilities assumed, contractual contingencies, and contingent consideration at their fair value on the acquisition date. It further requires that acquisition-related costs be recognized separately from the acquisition and expensed as incurred; that restructuring costs generally be expensed in periods subsequent to the acquisition date; and that changes in accounting for deferred tax asset valuation allowances and acquired income tax uncertainties after the measurement period be recognized as a component of provision for taxes. In addition, acquired in-process research and development (IPR&D) is capitalized as an intangible asset and amortized over its estimated useful life. The adoption of SFAS No. 141(R) will change our accounting treatment for business combinations on a prospective basis beginning in the first quarter of fiscal year 2009.

In December 2007, the FASB issued SFAS No. 160, Noncontrolling Interests in Consolidated Financial Statements an amendment of ARB No. 51 (SFAS No. 160). SFAS No. 160 changes the accounting and reporting for minority interests, which will be recharacterized as non-controlling interests and classified as a component of equity. SFAS No. 160 is effective for us on a prospective basis for business combinations with an acquisition date beginning in the first quarter of fiscal year 2009. As of March 29, 2008, we did not have any minority interests. The adoption of SFAS No. 160 will not impact our consolidated financial statements.

In March 2008, the FASB issued SFAS No. 161, Disclosures about Derivative Instruments and Hedging Activities an amendment of FASB Statement No. 133 (SFAS No. 161). The standard requires additional quantitative disclosures (provided in tabular form) and qualitative disclosures for derivative instruments. The required disclosures include how derivative instruments and related hedged items affect an entity's financial position, financial performance, and cash flows; relative volume of derivative activity; the objectives and strategies for using derivative instruments; the accounting treatment for those derivative instruments formally designated as the hedging instrument in a hedge relationship; and the existence and nature of credit-related contingent features for derivatives. SFAS No. 161 does not change the accounting treatment for derivative instruments. SFAS No. 161 is effective for us in the first quarter of fiscal year 2009.

Note 3: Fair Value

SFAS No. 157 defines fair value as the price that would be received from selling an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. When determining the fair value measurements for assets and liabilities required or permitted to be recorded at fair value, we consider the principal or most advantageous market in which we would transact and we consider assumptions that market participants would use when pricing the asset or liability, such as inherent risk, transfer restrictions, and risk of nonperformance.

Fair Value Hierarchy

SFAS No. 157 establishes a fair value hierarchy that requires an entity to maximize the use of observable inputs and minimize the use of unobservable inputs when measuring fair value. A financial instrument's categorization within the fair value hierarchy is based upon the lowest level of input that is significant to the fair value measurement. SFAS No. 157 establishes three levels of inputs that may be used to measure fair value:

Level 1 - Quoted prices in active markets for identical assets or liabilities.

Level 1 assets and liabilities consist of money market fund deposits and certain of our marketable debt and equity instruments, including equity instruments offsetting deferred compensation, that are traded in an active market with sufficient volume and frequency of transactions.

INTEL CORPORATION

NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS Unaudited (Continued)

Level 2 - Observable inputs other than Level 1 prices such as quoted prices for similar assets or liabilities; quoted prices in markets with insufficient volume or infrequent transactions (less active markets); or model-derived valuations in which all significant inputs are observable or can be derived principally from or corroborated by observable market data for substantially the full term of the assets or liabilities.

Level 2 assets include certain of our marketable debt and equity instruments with quoted market prices that are traded in less active markets or priced using a quoted market price for similar instruments. Level 2 assets also include marketable equity instruments with security-specific restrictions that would transfer to the buyer, marketable debt instruments priced using indicator prices which represent non-binding market consensus prices that can be corroborated by observable market quotes, as well as derivative contracts and debt instruments priced using inputs that are observable in the market or can be derived principally from or corroborated by observable market data.

Marketable debt instruments in this category generally include commercial paper, bank time deposits, repurchase agreements for fixed-income instruments, and a majority of floating-rate notes, corporate bonds, and municipal bonds.

Level 3 - Unobservable inputs to the valuation methodology that are significant to the measurement of fair value of assets or liabilities.

Level 3 assets and liabilities include marketable debt instruments, non-marketable equity investments, derivative contracts, and company issued debt whose values are determined using inputs that are both unobservable and significant to the values of the instruments being measured. Level 3 assets also include marketable debt instruments that are priced using indicator prices that we were unable to corroborate with observable market quotes.

Marketable debt instruments in this category generally include asset-backed securities and certain of our floating-rate notes, corporate bonds, and municipal bonds.

Assets/Liabilities Measured at Fair Value on a Recurring Basis

Assets and liabilities measured at fair value on a recurring basis, excluding accrued interest components, consisted of the following types of instruments as of March 29, 2008:

	Fair Value Measurements at Reporting Date Using			Total Balance
	Quoted Prices in Active Markets for Identical Instruments (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)	
(In Millions)				
Assets

Total liabilities measured at fair value	\$	\$ 160	\$ 160	\$ 320

INTEL CORPORATION

NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS Unaudited (Continued)

Assets and liabilities measured and recorded at fair value on a recurring basis, excluding accrued interest components, were presented on our consolidated condensed balance sheets as of March 29, 2008 as follows:

	Fair Value Measurements at Reporting Date Using			Total Balance
	Quoted Prices in Active Markets for Identical Instruments (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)	
(In Millions)				
Assets				
Cash and cash equivalents	\$ 1,784	\$ 3,888	\$	\$ 5,672
Short-term investments	49	4,053	889	4,991
Trading assets	517	1,223	1,076	2,816
Other current assets		221		221
Marketable equity securities	38	492		530
Other long-term investments	145	2,962	1,250	4,357
Other long-term assets		5	20	25
Total assets measured at fair value	\$ 2,533	\$ 12,844	\$ 3,235	\$ 18,612
Liabilities				
Other accrued liabilities	\$	\$ 139	\$ 32	\$ 171
Long-term debt			128	128
Other long-term liabilities		21		21
Total liabilities measured at fair value	\$	\$ 160	\$ 160	\$ 320

When available, we use observable market prices to value our marketable debt instruments. Approximately 55% of our balance of marketable debt instruments that are measured at fair value on a recurring basis and classified as Level 2 instruments were classified as such due to the usage of observable market prices in less active markets. When observable market prices are not available, we price our marketable debt instruments using non-binding market prices that are corroborated by observable market data, quoted market prices for similar instruments, or discounted cash flow techniques. Discounted cash flow techniques use observable market inputs, such as LIBOR-based yield curves, currency spot and forward rates, and credit ratings. Approximately 40% of our balance of marketable debt instruments that are measured at fair value on a recurring basis and classified as Level 2 instruments were classified as such due to the usage of discounted cash flow techniques and approximately 5% due to the usage of quoted market prices for similar instruments.

The majority of the balance of our available-for-sale marketable equity securities were classified as Level 2 instruments, primarily due to the adjustments to the fair values of these securities arising from transfer restrictions. Our marketable debt instruments that are measured at fair value on a recurring basis and classified as Level 3 instruments were classified as such due to the lack of observable market quotes to corroborate the indicator prices.

All of our long-term debt was eligible for the fair value option allowed by SFAS No. 159; however, we only elected the fair value option for the 2007 Arizona bonds. In connection with the 2007 Arizona bonds, we entered into an interest rate swap agreement which effectively converts the fixed rate on these bonds to a floating LIBOR-based rate. As a result, changes in the fair value of this debt are primarily offset by changes in the fair value of the interest rate swap agreement, without the need to apply the hedge accounting provisions of SFAS No. 133, Accounting for Derivative Instruments and Hedging Activities (SFAS No. 133). We elected not to adopt SFAS No. 159 for our 2005 Arizona bonds since the bonds were carried at amortized cost and were not eligible to apply the hedge accounting provisions of SFAS No. 133 due to the use of non-derivative hedging instruments. The 2007 Arizona bonds are included within the long-term debt balance on our consolidated condensed balance sheets. As of March 29, 2008 and December 29, 2007, no other long-term debt instruments were similar to the instrument for which we have elected SFAS No. 159 fair value treatment.

INTEL CORPORATION

NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS Unaudited (Continued)

The fair value of the 2007 Arizona bonds approximated its carrying value at the time we elected the fair value option under SFAS No. 159. As such, we did not record a cumulative-effect adjustment to the beginning balance of retained earnings or to the deferred tax liability. As of March 29, 2008, the difference between the fair value and the contractual principal balance of the 2007 Arizona bonds was \$3 million. The fair value of the 2007 Arizona bonds was determined using inputs that are observable in the market or that can be derived from or corroborated by observable market data as well as unobservable inputs. Gains and losses on the 2007 Arizona bonds are recorded in interest and other, net on the consolidated condensed statements of income. We capitalize interest associated with the 2007 Arizona bonds. We add capitalized interest to the cost of qualified assets and amortize it over the estimated useful lives of the assets.

The table below presents a reconciliation for all assets and liabilities measured at fair value on a recurring basis, excluding accrued interest components, using significant unobservable inputs (Level 3) for the three months ended March 29, 2008:

	Fair Value Measurements Using Significant Unobservable Inputs (Level 3)						Total Gains (Losses)

Assets/Liabilities Measured at Fair Value on a Nonrecurring Basis

The below table presents gains (losses) recorded during the three months ended March 29, 2008 for financial instruments that are recorded at fair value on a nonrecurring basis:

	Total balance as of March 29, 2008	Fair Value Measured Using			Total Gains (Losses)
		Quoted Prices in Active Markets for Identical Instruments (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)	
<u>(In Millions)</u>					
Non-marketable equity investments	\$ 3	\$	\$	\$ 3	\$ (33)
Total gains (losses) for assets held as of March 29, 2008					\$ (33)
Gains (losses) for assets no longer held					\$
Total gains (losses) for nonrecurring measurement					\$ (33)

A portion of our non-marketable equity investments were measured at fair value in the first quarter of 2008 due to events or circumstances we identified that significantly impacted the fair value of our investments, resulting in other-than-temporary impairment charges. These fair value measurements were calculated using financial metrics and ratios of comparable public companies and were classified as Level 3 instruments, as they use unobservable inputs and require management judgment due to the absence of quoted market prices, inherent lack of liquidity, and the long-term nature of such investments. The valuation of our non-marketable equity investments also takes into account the movements of the equity and venture capital markets, recent financing activities by the investees, changes in the interest rate environment, the investee's capital structure, liquidation preferences for the investee's capital, and other economic variables.

Note 4: Employee Equity Incentive Plans

Our equity incentive plans are broad-based, long-term retention programs intended to attract and retain talented employees and align stockholder and employee interests.

Under the 2006 Equity Incentive Plan, 294 million shares of common stock have been made available for issuance as equity awards to employees and non-employee directors. A maximum of 168 million of these shares can be awarded as non-vested shares (restricted stock) or non-vested share units (restricted stock units). As of March 29, 2008, 225 million shares remained available for future grant under the 2006 Plan.

The 2006 Stock Purchase Plan allows eligible employees to purchase shares of our common stock at 85% of the average of the high and low price of our common stock on specific dates. Under the 2006 Stock Purchase Plan,

Edgar Filing: INTEL CORP - Form 10-Q

240 million shares of common stock were made available for issuance through August 2011. As of March 29, 2008, 199 million shares are available for issuance under the 2006 Stock Purchase Plan.

NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS Unaudited (Continued)

Share-Based Compensation

Share-based compensation recognized for the three months ended March 29, 2008 was \$219 million (\$284 million for the three months ended March 31, 2007).

We use the Black-Scholes option pricing model to estimate the fair value of options granted under our equity incentive plans and rights to acquire stock granted under our stock purchase plan. We based the weighted average estimated values of employee stock option grants and rights granted under the stock purchase plan, as well as the weighted average assumptions used in calculating these values, on estimates at the date of grant, as follows:

	Stock Options		Stock Purchase Plan	
	Three Months Ended		Three Months Ended	
	March	March	March	March
	29,	31,	29,	31,
	2008	2007	2008	2007
Estimated values	\$ 6.61	\$ 5.78	\$ 5.10	\$ 4.72
Expected life (in years)	7.2	6.5	.5	.5
Risk-free interest rate	3.5%	4.8%	2.2%	5.3%
Volatility	38%	26%	35%	26%
Dividend yield	2.6%	2.2%	2.4%	2.1%

The expected life for options granted in the first quarter of 2008 and 2007 reflects grants given to key officers and other senior-level employees with delayed vesting periods.

We estimate the fair value of restricted stock unit awards using the value of our common stock on the date of grant, reduced by the present value of dividends expected to be paid on our common stock prior to vesting. We based the weighted average estimated values of restricted stock unit grants, as well as the weighted average assumptions that we used in calculating the fair value, on estimates at the date of grant, as follows:

	Three Months Ended	
	March	March 31,
	29,	2007
	2008	
Estimated values	\$ 18.13	\$ 19.33
Risk-free interest rate	2.8%	4.9%
Dividend yield	2.6%	2.2%

Stock Option Awards

Activity with respect to outstanding stock options for the first quarter of 2008 was as follows:

	Number of Shares	Weighted Average Exercise Price	Aggregate
			Intrinsic Value ¹
(In Millions, Except Per Share Amounts)			
December 29, 2007	665.9	\$ 27.76	
Grants	1.4	\$ 19.63	
Exercises	(10.9)	\$ 19.27	\$ 30
Cancellations and forfeitures	(9.6)	\$ 29.77	
March 29, 2008	646.8	\$ 27.85	

Options exercisable as of:			
December 29, 2007	528.2	\$	29.04
March 29, 2008	514.6	\$	29.15

¹ *Represents the difference between the exercise price and the value of Intel stock at the time of exercise.*

INTEL CORPORATION

NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS Unaudited (Continued)

Restricted Stock Unit Awards

Activity with respect to outstanding restricted stock units for the first quarter of 2008 was as follows:

<u>(In Millions, Except Per Share Amounts)</u>	Number of Shares	Weighted Average Grant- Date Fair Value	Aggregate Fair Value ¹
December 29, 2007	51.1	\$ 20.24	
Granted	0.6	\$ 18.13	
Vested ²	(0.1)	\$ 19.62	\$ 3
Forfeited	(1.3)	\$ 19.83	
March 29, 2008	50.3	\$ 20.22	

¹ Represents the value of Intel stock on the date that the restricted stock units vest. On the grant date, the fair value for these vested awards was \$2 million.

² The number of restricted stock units vested includes shares that we withheld on behalf of employees to satisfy the statutory tax withholding requirements.

Stock Purchase Plan

Employees purchased 14.9 million shares in the first quarter of 2008 (15.0 million shares in the first quarter of 2007) for \$258 million (\$234 million in the first quarter of 2007) under the 2006 Stock Purchase Plan.

Note 5: Earnings Per Share

We computed our basic and diluted earnings per common share as follows:

Three Months Ended

<u>(In Millions, Except Per Share Amounts)</u>	March 29, 2008	March 31, 2007
Net income	\$ 1,443	\$ 1,636
Weighted average common shares outstanding basic	5,787	5,777
Dilutive effect of employee equity incentive plans	41	46
Dilutive effect of convertible debt	51	51
Weighted average common shares outstanding diluted	5,879	5,874
Basic earnings per common share	\$ 0.25	\$ 0.28
Diluted earnings per common share	\$ 0.25	\$ 0.28

We computed our basic earnings per common share using net income and the weighted average number of common shares outstanding during the period. We computed diluted earnings per common share using net income and the weighted average number of common shares outstanding plus potentially dilutive common shares outstanding during the period. Potentially dilutive common shares include the assumed exercise of outstanding stock options, assumed vesting of outstanding restricted stock units, assumed issuance of stock under the stock purchase plan using the treasury stock method, and the assumed conversion of debt using the if-converted method.

For the first quarter of 2008, we excluded 490 million outstanding weighted average stock options (566 million for the first quarter of 2007) from the calculation of diluted earnings per common share because the exercise prices of these stock options were greater than or equal to the average market value of the common shares. These options could be included in the calculation in the future if the average market value of the common shares increases and is greater than the exercise price of these options.

INTEL CORPORATION

NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS Unaudited (Continued)

Note 6: Common Stock Repurchase Program

We have an ongoing authorization, amended in November 2005, from our Board of Directors to repurchase up to \$25 billion in shares of our common stock in open market or negotiated transactions. During the first quarter of 2008, we repurchased 121.9 million shares of common stock at a cost of \$2.5 billion (19.2 million shares at a cost of \$400 million during the first quarter of 2007). We have repurchased and retired 3.1 billion shares at a cost of approximately \$62 billion since the program began in 1990. As of March 29, 2008, \$12.0 billion remained available for repurchase under the existing repurchase authorization.

Note 7: Inventories

Inventories at the end of each period were as follows:

<u>(In Millions)</u>	March 29, 2008	Dec. 29, 2007
Raw materials	\$ 545	\$ 507
Work in process	1,361	1,460
Finished goods	1,366	1,403
Total inventories	\$ 3,272	\$ 3,370

Note 8: Trading Assets

Trading assets at fair value at the end of each period were as follows:

<u>(In Millions)</u>	March 29, 2008	Dec. 29, 2007
Marketable debt instruments	\$ 2,362	\$ 2,074
Equity instruments offsetting deferred compensation	454	492
Total trading assets	\$ 2,816	\$ 2,566

Note 9: Gains (Losses) on Equity Investments, Net

Gains (losses) on equity investments, net included:

<u>(In Millions)</u>	Three Months Ended March 29, 2008	March 31, 2007
Impairment charges	\$ (35)	\$ (36)
Gains on sales	19	15
Other, net	(43)	50
Total gains (losses) on equity investments, net	\$ (59)	\$ 29

Our equity method gains (losses), primarily from our investment in Clearwire Corporation, are included in the table above under other, net.

INTEL CORPORATION

NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS Unaudited (Continued)

Note 10: Interest and Other, Net

The components of interest and other, net were as follows:

<u>(In Millions)</u>	Three Months Ended	
	March 29, 2008	March 31, 2007
Interest income	\$ 198	\$ 184
Interest expense		(3)
Other, net	(30)	(12)
Total interest and other, net	\$ 168	\$ 169

Note 11: Comprehensive Income

The components of total comprehensive income were as follows:

<u>(In Millions)</u>	Three Months Ended	
	March 29, 2008	March 31, 2007
Net income	\$ 1,443	\$ 1,636
Change in net unrealized holding gain on available-for-sale investments	(292)	(34)
Change in net unrealized holding gain on derivatives	103	(1)
Total comprehensive income	\$ 1,254	\$ 1,601

The components of accumulated other comprehensive income (loss), net of tax, at the end of each period were as follows:

<u>(In Millions)</u>	March 29, 2008	Dec. 29, 2007
	Accumulated net unrealized holding gain on available-for-sale investments	\$ 32
Accumulated net unrealized holding gain on derivatives	203	100
Accumulated net prior service costs	(13)	(13)
Accumulated net actuarial losses	(148)	(148)
Accumulated transition obligation	(2)	(2)
Total accumulated other comprehensive income (loss)	\$ 72	\$ 261

In the table above, accumulated net unrealized holding gain on available-for-sale investments included \$112 million as of March 29, 2008 related to our investment in VMware, Inc., net of tax of \$66 million (\$364 million, net of tax of \$212 million as of December 29, 2007).

Note 12: Divestitures

During the first quarter of 2008, we completed the divestiture of a portion of the telecommunication related assets of our optical platform division that were included in the Digital Enterprise Group operating segment. Consideration for the divestiture was approximately \$85 million, including \$75 million in cash and common shares of the acquiring

company with an estimated value of \$10 million at the date of purchase. We entered into an agreement with the acquiring company to provide certain manufacturing and transition services for a limited time. Approximately 45 employees of our optical products business became employees of the acquiring company. As a result of this divestiture, we recorded a net gain of \$39 million within interest and other, net.

On March 30, 2008 (subsequent to the first quarter), we completed the divestiture of our NOR flash memory business. We exchanged certain NOR flash memory assets and certain assets associated with our phase change memory initiatives with Numonyx B.V. for a note receivable with a contractual amount of \$144 million and a 45.1% ownership interest in the form of common stock. We retain certain rights to intellectual property included within the divestiture. Approximately 2,500 employees of our NOR flash memory business became employees of Numonyx. Our investment in Numonyx will be recorded within other long-term assets and accounted for under the equity method of accounting, and our proportionate share of the income or loss will be recognized on a one quarter lag.

STMicroelectronics N.V. contributed certain assets to Numonyx for a note receivable with a contractual amount of \$156 million and a 48.6% ownership interest in the form of common stock. Francisco Partners L.P. paid \$150 million in cash in exchange for the remaining 6.3% ownership interest in the form of preferred stock and a note receivable with a contractual amount of \$20 million. In addition, they received a preferential payout right to the investments of Intel and STMicroelectronics.

INTEL CORPORATION**NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS Unaudited (Continued)**

Additional terms of this divestiture include:

We are leasing a facility in Israel to Numonyx for a period of up to 24 years under a fully paid up-front operating lease.

We entered into supply agreements that involve the manufacture and the assembly and test of NOR flash memory products for Numonyx through the end of the year.

We entered into a transition services agreement which involves providing certain services such as information technology, supply chain, finance support, and other services to Numonyx for up to one year. Payments from Numonyx will partially offset the related cost of sales and operating expenses.

Numonyx entered into an unsecured, four year senior credit facility of up to \$550 million, comprised of a \$450 million term loan and a \$100 million revolving loan. Intel and STMicroelectronics have each provided the lenders with a guarantee of 50% of Numonyx's payment obligations under the senior credit facility. A demand on our guarantee can be triggered if Numonyx is unable to meet its obligations under the credit facility. Acceleration of Numonyx's obligations under the credit facility could be triggered by a monetary default of Numonyx or, in certain circumstances, can be triggered by events affecting the creditworthiness of STMicroelectronics. This guarantee is within the scope of FASB Interpretation No. 45, Guarantor's Accounting and Disclosure Requirement for Guarantees, Including Indirect Guarantees of Indebtedness of Others. The maximum amount of future undiscounted payments we could be required to make under the guarantee is \$275 million plus accrued interest, expenses of the lenders, and penalties.

Our notes receivable mentioned above are subordinated to the senior credit facility and Francisco Partners preferential payout, and will be deemed extinguished in liquidation events that generate proceeds insufficient to repay the senior credit facility and Francisco Partners' preferential payout.

As of March 29, 2008, approximately \$460 million of NOR flash memory assets were classified as held for sale within other current assets. The disposal group consisted primarily of property, plant and equipment and inventory. We ceased recording depreciation on property, plant and equipment that we classified as held for sale beginning in the second quarter of 2007. In the first quarter of 2008, we recorded additional asset impairment charges of \$275 million related to assets of our NOR flash memory business. See Note 14: Restructuring and Asset Impairment Charges for further discussion.

Note 13: Identified Intangible Assets

We classify identified intangible assets within other long-term assets on the consolidated condensed balance sheets. Identified intangible assets consisted of the following as of March 29, 2008:

(In Millions)	Gross Assets	Accumulated Amortization	Net
Intellectual property assets	\$ 1,164	\$ (479)	\$ 685
Acquisition-related developed technology	19	(4)	15
Other intangible assets	340	(137)	203
Total identified intangible assets	\$ 1,523	\$ (620)	\$ 903

Identified intangible assets consisted of the following as of December 29, 2007:

(In Millions)	Gross Assets	Accumulated Amortization	Net
Intellectual property assets	\$ 1,158	\$ (438)	\$ 720
Acquisition-related developed technology	19	(3)	16
Other intangible assets	360	(136)	224

INTEL CORPORATION

NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS Unaudited (Continued)

Based on identified intangible assets recorded as of March 29, 2008, and assuming the underlying assets are not impaired in the future, we expect amortization expense for each period to be as follows:

(In Millions)	2008 ¹	2009	2010	2011	2012
Intellectual property assets	\$ 120	\$ 134	\$ 123	\$ 72	\$ 61
Acquisition-related developed technology	\$ 4	\$ 4	\$ 4	\$ 3	\$
Other intangible assets	\$ 71	\$ 122	\$ 10	\$	\$

¹ Reflects the remaining nine months of fiscal year 2008.

Note 14: Restructuring and Asset Impairment Charges

In the third quarter of 2006, management approved several actions as part of a restructuring plan designed to improve operational efficiency and financial results. Restructuring and asset impairment charges for the first quarter of 2008 and the first quarter of 2007 were as follows:

(In Millions)	Three Months Ended	
	March 29, 2008	March 31, 2007
Employee severance and benefit arrangements	\$ 54	\$ 21
Asset impairments	275	54
Total restructuring and asset impairment charges	\$ 329	\$ 75

During the first quarter of 2008, we incurred \$275 million in asset impairment charges related to assets which were sold subsequent to quarter end in conjunction with the divestiture of our NOR flash memory business. The impairment charges were determined using the revised fair value that we received upon completion of the divestiture, less selling costs. The lower fair value was primarily a result of a decline in the outlook for the flash memory market segment. See Note 12: Divestitures for further discussion. In the first quarter of 2007, we incurred \$54 million in asset impairment charges as a result of softer than anticipated market conditions related to the Colorado Springs, Colorado facility, which has been placed for sale.

Restructuring and asset impairment activity for the first quarter of 2008 was as follows:

(In Millions)	Employee Severance and Benefits	Asset Impairments	Total
Accrued restructuring balance as of December 29, 2007	\$ 127	\$	\$ 127
Additional accruals	57	275	332
Adjustments	(3)		(3)
Cash payments	(83)		(83)
Non-cash settlements		(275)	(275)
	\$ 98	\$	\$ 98

**Accrued restructuring balance as of March 29,
2008**

We recorded the additional accruals, net of adjustments, as restructuring and asset impairment charges. The remaining accrual as of March 29, 2008 was related to severance benefits that we recorded as a current liability within accrued compensation and benefits.

From the third quarter of 2006 through the first quarter of 2008, we incurred a total of \$1.4 billion in restructuring and asset impairment charges related to this plan. These charges include a total of \$581 million related to employee severance and benefit arrangements due to the termination of approximately 10,400 employees, and \$819 million in asset impairment charges. We may incur additional restructuring charges in the future for employee severance and benefit arrangements, and facility-related or other exit activities.

INTEL CORPORATION**NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS Unaudited (Continued)****Note 15: Ventures**

Our investment in IM Flash Technologies, LLC (IMFT) was \$2.2 billion and our investment in IM Flash Singapore, LLP (IMFS) was \$249 million as of March 29, 2008 (\$2.2 billion in IMFT and \$146 million in IMFS as of December 29, 2007). These amounts represent our maximum exposure to loss. Our investments in these ventures are classified within other long-term assets. Subject to certain conditions, we agreed to contribute up to approximately \$1.4 billion for IMFT and up to approximately \$1.7 billion for IMFS in the three years following the initial capital contributions. Of these amounts, as of March 29, 2008, our remaining commitment was approximately \$175 million for IMFT and approximately \$1.4 billion for IMFS. Additionally, our portion of IMFT costs, primarily related to product purchases and start-up, was approximately \$250 million during the first quarter of 2008 (approximately \$160 million during the first quarter of 2007). The amount due to IMFT for product purchases and services provided was approximately \$185 million as of March 29, 2008 and was approximately \$130 million as of December 29, 2007.

Note 16: Contingencies***Legal Proceedings***

We are currently a party to various legal proceedings, including those noted in this section. While management presently believes that the ultimate outcome of these proceedings, individually and in the aggregate, will not materially harm the company's financial position, cash flows, or overall trends in results of operations, litigation is subject to inherent uncertainties, and unfavorable rulings could occur. An unfavorable ruling could include money damages or, in cases for which injunctive relief is sought, an injunction prohibiting us from selling one or more products at all or in particular ways. Were an unfavorable ruling to occur, our business or results of operations could be materially harmed.

Advanced Micro Devices, Inc. (AMD) and AMD International Sales & Service, Ltd. v. Intel Corporation and Intel Kabushiki Kaisha, and Related Consumer Class Actions and Government Investigations

In June 2005, AMD filed a complaint in the United States District Court for the District of Delaware alleging that we and our Japanese subsidiary engaged in various actions in violation of the Sherman Act and the California Business and Professions Code, including providing secret and discriminatory discounts and rebates and intentionally interfering with prospective business advantages of AMD. AMD's complaint seeks unspecified treble damages, punitive damages, an injunction, and attorneys' fees and costs. Subsequently, AMD's Japanese subsidiary also filed suits in the Tokyo High Court and the Tokyo District Court against our Japanese subsidiary, asserting violations of Japan's Antimonopoly Law and alleging damages in each suit of approximately \$55 million, plus various other costs and fees. At least 82 separate class actions have been filed in the U.S. District Courts for the Northern District of California, Southern District of California, District of Idaho, District of Nebraska, District of New Mexico, District of Maine, and the District of Delaware, as well as in various California, Kansas, and Tennessee state courts. These actions generally repeat AMD's allegations and assert various consumer injuries, including that consumers in various states have been injured by paying higher prices for computers containing our microprocessors. All of the federal class actions and the Kansas and Tennessee state court class actions have been or will be consolidated by the Multidistrict Litigation Panel to the District of Delaware. All California class actions have been consolidated to the Superior Court of California in Santa Clara County. We dispute AMD's claims and the class-action claims, and intend to defend the lawsuits vigorously.

We are also subject to certain antitrust regulatory inquiries. In 2001, the European Commission (EC) commenced an investigation regarding claims by AMD that we used unfair business practices to persuade clients to buy our microprocessors. The EC sent us a Statement of Objections in July 2007 alleging that certain Intel marketing and pricing practices amounted to an abuse of a dominant position that infringed European law. The Statement recognized that such allegations were preliminary, not final, conclusions. We responded to those allegations in January 2008 and a hearing was held March 11-12, 2008. We intend to contest this matter vigorously in the administrative procedure, which has now begun and, if necessary, in European courts. In February 2008, the EC initiated an inspection of documents at our Feldkirchen, Germany offices, and the EC staff has recently served requests for additional information. We are cooperating with the investigation.

In June 2005, we received an inquiry from the Korea Fair Trade Commission (KFTC) requesting documents from our Korean subsidiary related to marketing and rebate programs that we entered into with Korean PC manufacturers. In September 2007, the KFTC served us an Examination Report alleging that sales to two customers during parts of 2002-2005 violated Korea's Monopoly Regulation and Fair Trade Act. In December 2007, we submitted our written response to the KFTC. We anticipate that there will be several pre-hearing conferences and formal hearings before the KFTC makes its determination. We intend to contest this matter vigorously in the administrative procedure and, if necessary, in Korean courts.

INTEL CORPORATION

NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS Unaudited (Continued)

In January 2008, we received a subpoena from the Attorney General of the State of New York requesting documents and information to assist in its investigation of whether there have been any agreements or arrangements establishing or maintaining a monopoly in the sale of microprocessors in violation of federal or New York antitrust laws.

We intend to cooperate with and respond to these investigations as appropriate and we expect that these matters will be acceptably resolved.

Barbara's Sales, et al. v. Intel Corporation, Gateway Inc., Hewlett-Packard Co. and HPDirect, Inc.

In June 2002, various plaintiffs filed a lawsuit in the Third Judicial Circuit Court, Madison County, Illinois, against Intel, Gateway Inc., Hewlett-Packard Company, and HPDirect, Inc. alleging that the defendants' advertisements and statements misled the public by suppressing and concealing the alleged material fact that systems containing Intel® Pentium® 4 processors are less powerful and slower than systems containing Intel® Pentium® III processors and a competitor's microprocessors. In July 2004, the court certified against us an Illinois-only class of certain end-use purchasers of certain Pentium 4 processors or computers containing these microprocessors. In January 2005, the court granted a motion filed jointly by the plaintiffs and Intel that stayed the proceedings in the trial court pending discretionary appellate review of the court's class certification order. In July 2006, the Illinois Appellate Court, Fifth District, vacated the trial court's class certification order. The Appellate Court instructed the trial court to reconsider whether California law should apply. However, in August 2006, the Illinois Supreme Court agreed to review the Appellate Court's decision. In November 2007, the Illinois Supreme Court issued its opinion finding in favor of Intel on two issues. First, on the issue of whether Illinois or California law applies to the claims of Illinois residents for goods purchased in Illinois, the Court found that Illinois law applies, rejecting the Appellate Court's finding of a nationwide class based on application of the California law. Second, on the issue of whether any class should be certified in this case at all, the Court held that no class should be certified, reversing the trial court's finding of an Illinois-only class based on Illinois law. The case was remanded to the trial court and on March 20, 2008 an order was entered dismissing the case with prejudice based on our motion to dismiss.

Martin Smilow v. Craig R. Barrett et al. & Intel Corporation

In February 2008, Martin Smilow, an Intel stockholder, filed a putative derivative action in the United States District Court for the District of Delaware against members of our Board of Directors. The complaint alleges generally that the Board allowed the company to violate antitrust and other laws, as described in AMD's antitrust lawsuits against us, and that those Board-sanctioned activities have harmed the company. The complaint repeats many of AMD's allegations and references various investigations by the European Community, Korean Fair Trade Commission, and others. In February 2008, a second plaintiff, Evan Tobias, filed a derivative suit in the same court against the Board containing many of the same allegations as in the Smilow suit. In March, all parties submitted a stipulation to the District Court whereby Smilow and Tobias agreed to file a single, consolidated complaint by May 2, 2008, and Intel and the Board agreed to respond within 30 days. We deny the allegations and intend to defend the lawsuit vigorously.

Note 17: Operating Segment Information

Our operating segments include the Digital Enterprise Group, Mobility Group, NAND Products Group, Flash Memory Group, Digital Home Group, Digital Health Group, and Software and Solutions Group. Subsequent to the end of the first quarter, we completed the divestiture of our NOR flash memory assets to Numonyx. We entered into supply and transition service agreements to provide products, services, and support to Numonyx. Revenues and expenses resulting from these agreements will be recognized by the Flash Memory Group operating segment. See Note 12: Divestitures for further discussion.

The Chief Operating Decision Maker (CODM), as defined by SFAS No. 131, Disclosures about Segments of an Enterprise and Related Information (SFAS No. 131), is our President and Chief Executive Officer (CEO). The CODM allocates resources to and assesses the performance of each operating segment using information about its revenue and operating income (loss) before interest and taxes.

We report the financial results of the following operating segments:

Digital Enterprise Group. Includes microprocessors and related chipsets and motherboards designed for the desktop and enterprise computing market segments; communications infrastructure components such as

network processors, communications boards, and embedded processors; wired connectivity devices; and products for network and server storage.

Mobility Group. Includes microprocessors and related chipsets designed for the notebook market segment, wireless connectivity products, and products designed for the ultra-mobile market segment.

The NAND Products Group, Flash Memory Group, Digital Home Group, Digital Health Group, and Software and Solutions Group operating segments do not meet the quantitative thresholds for reportable segments as defined by SFAS No. 131 and are included within the all other category.

INTEL CORPORATION**NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS Unaudited (Continued)**

We have sales and marketing, manufacturing, finance, and administration groups. Expenses for these groups are generally allocated to the operating segments, and the expenses are included in the operating results reported below. Revenue for the all other category is primarily related to the sale of NOR flash memory products, NAND flash memory products, and microprocessors and related chipsets by the Digital Home Group. The all other category includes certain corporate-level operating expenses and charges. These expenses and charges include:

- a portion of profit-dependent bonuses and other expenses not allocated to the operating segments;
- results of operations of seed businesses that support our initiatives;
- acquisition-related costs, including amortization and any impairment of acquisition-related intangibles and goodwill; and
- amounts included within restructuring and asset impairment charges.

With the exception of goodwill, we do not identify or allocate assets by operating segment, nor does the CODM evaluate operating segments using discrete asset information. Operating segments do not record inter-segment revenue, and, accordingly, there is none to be reported. We do not allocate interest and other income, interest expense, or taxes to operating segments. Although the CODM uses operating income to evaluate the segments, operating costs included in one segment may benefit other segments. Except as discussed above, the accounting policies for segment reporting are the same as for Intel as a whole.

Subsequent to the end of the first quarter, we completed a reorganization that transferred the revenue and costs associated with the Digital Home Group's consumer PC components business to the Digital Enterprise Group. After the reorganization, the Digital Home Group will focus on the consumer electronics components business. The operating results for the reporting period that ended March 29, 2008 were managed under the organizational structure that existed prior to the reorganization; therefore, the operating segment information below is presented under the previous organizational structure.

Segment information is summarized as follows:

(In Millions)	Three Months Ended	
	March	March 31,
	29,	2007
	2008	2007
Net revenue		
Digital Enterprise Group		
Microprocessor revenue	\$ 4,123	\$ 3,561
Chipset, motherboard, and other revenue	1,175	1,193
	5,298	4,754
Mobility Group		
Microprocessor revenue	2,726	2,441
Chipset and other revenue	943	866
	3,669	3,307
All other	706	791
Total net revenue	\$ 9,673	\$ 8,852
Operating income (loss)		
Digital Enterprise Group	\$ 1,722	\$ 931

Edgar Filing: INTEL CORP - Form 10-Q

Mobility Group	1,185	1,382
All other	(845)	(638)
Total operating income	\$ 2,062	\$ 1,675

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Our Management's Discussion and Analysis of Financial Condition and Results of Operations (MD&A) is provided in addition to the accompanying consolidated condensed financial statements and notes to assist readers in understanding our results of operations, financial condition, and cash flows. MD&A is organized as follows:

Overview. Discussion of our business and overall analysis of financial and other highlights affecting the company in order to provide context for the remainder of MD&A.

Strategy. Overall strategy and the strategy for our operating segments.

Critical Accounting Estimates. Accounting estimates that we believe are most important to understanding the assumptions and judgments incorporated in our reported financial results and forecasts.

Results of Operations. An analysis of our financial results comparing the first quarter of 2008 to the first quarter of 2007.

Liquidity and Capital Resources. An analysis of changes in our balance sheets and cash flows, and discussion of our financial condition.

Business Outlook. Our forecasts for selected data points for the second quarter of 2008 and the 2008 fiscal year.

The various sections of this MD&A contain a number of forward-looking statements. Words such as *expects*, *goals*, *plans*, *believes*, *continues*, *may*, and variations of such words and similar expressions are intended to identify such forward-looking statements. In addition, any statements that refer to projections of our future financial performance, our anticipated growth and trends in our businesses, and other characterizations of future events or circumstances are forward-looking statements. Such statements are based on our current expectations and could be affected by the uncertainties and risk factors described throughout this filing and particularly in the *Business Outlook* section (see also *Risk Factors* in Part II, Item 1A of this Form 10-Q). Our actual results may differ materially, and these forward-looking statements do not reflect the potential impact of any divestitures, mergers, acquisitions, or other business combinations that had not been completed as of April 28, 2008.

Overview

Our goal is to be the preeminent provider of semiconductor chips and platforms for the worldwide digital economy. Our primary component-level products include microprocessors, chipsets, and flash memory.

We entered 2008 with what we believe is our strongest combination of products, silicon technology, and manufacturing leadership in our history. We are introducing new technologies and product lines designed for a number of new product categories, such as mobile internet devices (MIDs), netbooks, and nettops.

In the NAND flash memory market segment, we are facing oversupply issues and a weak pricing environment. In response to these changes in the NAND flash memory market segment, the production timing of our IM Flash Singapore, LLP (IMFS) joint venture with Micron Technology, Inc. has been pushed out. While revenue is expected to continue to be impacted by the weakened NAND pricing environment in 2008, we expect the impact to be offset by the strength in our microprocessor business and reduction in product costs. As a result, the midpoint of our gross margin outlook for 2008 has remained unchanged at 57%.

Subsequent to the close of the quarter, we divested our NOR flash memory assets to Numonyx B.V. We will continue to have revenue associated with a supply agreement we have with Numonyx. This divestiture is expected to result in a negative impact on revenue and a benefit to our gross margin percentage during the remainder of 2008 as our NOR flash memory products have a lower gross margin than our microprocessors.

Net revenue, gross margin, operating income, and net income for the first quarter of 2008, the fourth quarter of 2007 and the first quarter of 2007 were as follows:

(In Millions)	Q1 2008	Q4 2007	Q1 2007
Net revenue	\$ 9,673	\$ 10,712	\$ 8,852
Gross margin	\$ 5,207	\$ 6,226	\$ 4,432
Operating income	\$ 2,062	\$ 3,047	\$ 1,675
Net income	\$ 1,443	\$ 2,271	\$ 1,636

The first quarter of 2008, compared to the first quarter of 2007, showed higher revenue and unit sales of our microprocessor products, and in particular our server microprocessors, which had record revenue for a quarter. We also saw growth in our server chipset unit sales, which increased in the first quarter of 2008 as compared to both the first and the fourth quarter of 2007. Our server microprocessor revenue benefited from a strong ramp of our quad-core multi-processor server products on 45-nm process technology. However, the benefits obtained from our microprocessor results in the first quarter of 2008, were offset by the weak NAND flash memory pricing environment.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

The trend of mobile microprocessor unit growth outpacing the growth in desktop microprocessor units has accelerated and while we previously believed a crossover would occur in 2009, we now believe this crossover will occur within 2008. As demand increases for mobile products, system price points expand to include new lower priced mobile microprocessors, including low power, cost-optimized processors. We expect continuing erosion in average selling prices for mobile microprocessors due to the increase in demand at these lower price points. Prices for mobile microprocessors are higher than comparable desktop microprocessors; therefore the shift in our mix to mobile microprocessors has a positive effect on our results.

Gross margin as a percentage of revenue was lower in the first quarter of 2008 as compared to the fourth quarter of 2007 as a result of lower microprocessor unit sales, chipset inventory write-offs, higher microprocessor unit costs as we transition to products using our 45-nm process technology, and higher start-up costs associated with that transition. More recently introduced products tend to have higher costs with the initial overall development and production ramp. However, our product costs are expected to decline in the second quarter and decline further in the second half of 2008.

In the fourth quarter of 2007, we recorded restructuring and asset impairment charges of \$234 million, of which \$85 million related to our NOR flash memory assets. In the first quarter of 2008, we recorded \$329 million of restructuring and asset impairment charges, including an additional asset impairment charge of \$275 million related to the NOR flash memory assets sold to Numonyx subsequent to quarter close. Our outlook for Q2 2008 is for additional restructuring and asset impairment charges of \$250 million. We expect charges as a result of our restructuring program announced in 2006 to decline in the second half of the year.

Our tax rate has increased, as compared to prior periods, primarily as a result of a higher proportion of profits being generated in higher-tax jurisdictions. We expect the higher tax rate will continue until we ramp additional production in lower tax jurisdictions.

From a financial condition perspective, we ended the first quarter of 2008 with an investment portfolio valued at \$17.7 billion, consisting of cash and cash equivalents, fixed-income trading assets, and short- and long-term investments. Substantially all of our investments in debt instruments are with A/A2 or better rated issuers, and the substantial majority of the issuers are rated AA-/Aa2 or better. See [Liquidity and Capital Resources](#) for additional details on our investment portfolio.

During the first quarter of 2008, we repurchased \$2.5 billion of stock through our stock repurchase program and paid \$739 million to stockholders as dividends. In January our Board of Directors increased our quarterly cash dividend amount by 13%, from \$0.1125 to \$0.1275 per common share. In March, the Board of Directors increased our quarterly cash dividend payout by an additional 10% and declared a dividend of \$0.14 per common share to be paid in June.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

Strategy

Our goal is to be the preeminent provider of semiconductor chips and platforms for the worldwide digital economy. As part of our overall strategy to compete in each relevant market segment, we use our core competencies in the design and manufacture of integrated circuits, as well as our financial resources, global presence, and brand recognition. We believe that we have the scale, capacity, and global reach to establish new technologies and respond to customers' needs quickly.

Some of our key focus areas are listed below:

Customer Orientation. Our strategy focuses on developing our next generation of products based on the needs and expectations of our customers. In turn, our products help enable the design and development of new form factors and usage models for businesses and consumers. We offer platforms with ingredients designed and configured to work together to provide an optimized user computing solution compared to ingredients that are used separately.

Energy-Efficient Performance. We believe that users of computing and communications systems and devices want improved overall and energy-efficient performance. Improved overall performance can include faster processing performance and other capabilities such as multithreading and multitasking. Performance can also be improved through enhanced connectivity, security, manageability, reliability, ease of use, and interoperability among devices. Improved energy-efficient performance involves balancing the addition of these and other types of improved performance factors with lower power consumption. Our microprocessors have one, two, or four processor cores, and we continue to develop processors with an increasing number of cores, which enable improved multitasking and energy efficiency.

Design and Manufacturing Technology Leadership. Our strategy for developing microprocessors with improved performance is to synchronize the introduction of a new microarchitecture with improvements in silicon process technology. We plan to introduce a new microarchitecture approximately every two years and ramp the next generation of silicon process technology in the intervening years. This coordinated schedule allows us to develop and introduce new products based on a common microarchitecture quickly, without waiting for the next generation of silicon process technology. We refer to this as our "tick-tock" technology development cadence.

Strategic Investments. We make equity investments in companies around the world to further our strategic objectives and to support our key business initiatives, including investments through our Intel Capital program. We generally focus on investing in companies and initiatives to stimulate growth in the digital economy, create new business opportunities for Intel, and expand global markets for our products. Our current investment focus areas include those that we believe help to enable mobile wireless devices, advance the digital home, enhance the digital enterprise, advance high-performance communications infrastructures, and develop the next generation of silicon process technologies. Our focus areas tend to develop and change over time due to rapid advancements in technology.

Business Environment and Software. We plan to continue to cultivate new businesses and work to encourage the industry to offer products that take advantage of the latest market trends and usage models. We also provide development tools and support to help software developers create software applications and operating systems that take advantage of our platforms. We frequently participate in industry initiatives designed to discuss and agree upon technical specifications and other aspects of technologies that could be adopted as standards by standards-setting organizations. In addition, we work collaboratively with other companies to protect digital content and the consumer. Lastly, through our Software and Solutions Group (SSG), we help enable and advance the computing ecosystem by developing value-added software products and services.

We believe that the proliferation of the Internet, including user demand for premium content and rich media, is the primary driver of the need for greater performance in PCs and servers. A growing number of older PCs are increasingly incapable of handling the tasks that users are demanding, such as streaming video, uploading photos, and online gaming. As these tasks become even more demanding and require more computing power, we believe that

users will need and want to buy new PCs to perform everyday tasks on the Internet. We also believe that increased Internet traffic is creating a need for greater server infrastructure, including server products optimized for energy-efficient performance.

The trend of mobile microprocessor unit growth outpacing the growth in desktop microprocessor units has accelerated and, while we previously believed a crossover would occur in 2009, we now believe this crossover will occur within 2008. We believe that the demand for mobile microprocessors will result in the increased development of products with form factors and uses that require low-power and low-cost microprocessors.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

With our research and development (R&D) expenditures, we are investing in areas in which we believe the application of highly integrated Intel® architecture provides growth opportunities, such as scalable, high-performance visual computing solutions that integrate vivid graphics and supercomputing performance for scientific, financial services, and other compute-intensive applications. In addition, our design and manufacturing technology leadership, including the recent introduction of our new 45nm process technology, allows us to develop low-cost, low-power microprocessors for new uses and form factors. In Q1 2008, we introduced the Intel Atom brand as a new family of low-power 45nm based microprocessors. We believe that these new microprocessors will give us the ability to extend Intel architecture and drive growth in new market segments, including a growing number of products that require processors specifically designed for embedded solutions; MIDs, a new category of small, mobile consumer devices enabling a PC-like Internet experience; consumer electronics devices, which will deliver media and services to set-top boxes and TVs over broadband Internet connections; and a new category of affordable Internet-focused notebooks (netbooks) and desktops (nettops). We believe that the common elements for products in these new market segments are low power, low cost, and the ability to access the Internet. These new microprocessors will generally be offered at lower price points than our other microprocessors.

Strategy by Operating Segment

Subsequent to the end of the first quarter, we completed a reorganization that transferred the revenue and costs associated with the Digital Home Group's consumer PC components business to the Digital Enterprise Group. After the reorganization, the Digital Home Group will focus on the consumer electronics components business. The strategy by operating segment presented below is based on the new organizational structure.

Our **Digital Enterprise Group** (DEG) offers computing and communications products for businesses, service providers, and consumers. DEG products are incorporated into desktop computers, enterprise computer servers, workstations, and products that make up the infrastructure for the Internet. We also offer products for embedded designs, such as industrial equipment, point-of-sale systems, panel PCs, automotive information/entertainment systems, and medical equipment. Within DEG, our largest market segments are in desktop and enterprise computing. Our strategy for the desktop computing market segment is to offer products that provide increased manageability, security, and energy-efficient performance while at the same time lowering total cost of ownership for businesses. In the desktop computing market segment, we also focus on the design of components for high-end enthusiast PC's and mainstream PC's with rich audio and video capabilities. Our strategy for the enterprise computing market segment is to offer products that provide energy-efficient performance, ease of use, manageability, reliability, and security for entry-level to high-end servers and workstations.

The strategy for our **Mobility Group** is to offer notebook PC products designed to improve performance, battery life, and wireless connectivity, as well as to allow for the design of smaller, lighter, and thinner form factors. We are also increasing our focus on notebooks designed for the business environment by offering products that provide increased manageability and security, and we continue to invest in the build-out of WiMAX. For the ultra-mobile market segment, we offer energy-efficient products that are designed primarily for mobile processing of digital content and Internet access, and we are developing new products to support this evolving market segment, including products for MIDs and ultra-mobile PCs.

The strategy for our **NAND Products Group** is to offer advanced NAND flash memory products, focusing on system-level applications such as solid-state drives. Additionally, we offer NAND products used in digital audio players and memory cards. In support of our strategy to provide advanced flash memory products, we continue to focus on the development of innovative products designed to address the needs of customers for reliable, non-volatile, low-cost, high-density memory.

Beginning in the second quarter of 2008, the **Flash Memory Group** provides products, services and support to Numonyx as part of the supply and transition service agreements. See Note 12: Divestitures in the Notes to Consolidated Condensed Financial Statements of this Form 10-Q.

The strategy for our **Digital Home Group** is to offer products and solutions for use in consumer electronics devices designed to access and share Internet, broadcast, optical media, and personal content through a variety of linked digital devices within the home. We are focusing on the design of components for consumer electronic devices such as digital TVs, high-definition media players, and set-top boxes.

The strategy for our **Digital Health Group** is to design and deliver technology-enabled products and explore global business opportunities in healthcare information technology, healthcare research, and productivity, as well as personal healthcare. In support of this strategy, we are focusing on the design of technology solutions and platforms for the digital hospital and consumer/home health products.

The strategy for our **Software and Solutions Group** is to promote Intel architecture as the platform of choice for software and services. SSG works with the worldwide software and services ecosystem by providing software products, engaging with developers, and driving strategic software investments.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

Critical Accounting Estimates

The methods, estimates, and judgments that we use in applying our accounting policies have a significant impact on the results that we report in our financial statements. Some of our accounting policies require us to make difficult and subjective judgments, often as a result of the need to make estimates regarding matters that are inherently uncertain. Our most critical accounting estimates include:

- the valuation of non-marketable equity investments, which impacts net gains (losses) on equity investments when we record impairments;
- the assessment of recoverability of long-lived assets, which primarily impacts gross margin or operating expenses when we record asset impairments or accelerate their depreciation;
- the recognition and measurement of current and deferred income taxes (including the measurement of uncertain tax positions), which impact our provision for taxes;
- the valuation of inventory, which impacts gross margin; and
- the valuation and recognition of share-based compensation, which impact gross margin; R&D expenses; and marketing, general and administrative expenses.

Below, we discuss these policies further, as well as the estimates and judgments involved. We also have other policies that we consider key accounting policies, such as those for revenue recognition, including the deferral of revenue on sales to distributors; however, these policies typically do not require us to make estimates or judgments that are difficult or subjective.

Non-Marketable Equity Investments

We regularly invest in the non-marketable equity instruments of private companies, which range from early-stage companies that are often still defining their strategic direction to more mature companies with established revenue streams and business models. The carrying value of our non-marketable equity investment portfolio, excluding equity derivatives, totaled \$3.6 billion as of March 29, 2008 (\$3.4 billion as of December 29, 2007) and included our investment in IM Flash Technologies, LLC (IMFT) of \$2.2 billion (\$2.2 billion as of December 29, 2007). Our non-marketable equity investments are classified in other long-term assets on the consolidated condensed balance sheets.

Non-marketable equity investments are inherently risky, and a number of these companies are likely to fail. Their success is dependent on product development, market acceptance, operational efficiency, and other factors. In addition, depending on their future prospects and on market conditions, they may not be able to raise additional funds when needed or they may receive lower valuations, with less favorable investment terms than in previous financings, and our investments would likely become impaired.

We review our investments quarterly for indicators of impairment; however, for non-marketable equity investments, the impairment analysis requires significant judgment to identify events or circumstances that would significantly harm the fair value of the investment. The indicators that we use to identify those events or circumstances include:

- the investee's revenue and earnings trends relative to predefined milestones and overall business prospects;
- the technological feasibility of the investee's products and technologies;
- the general market conditions in the investee's industry or geographic area, including adverse regulatory or economic changes;
- factors related to the investee's ability to remain in business, such as the investee's liquidity, debt ratios, and the rate at which the investee is using its cash; and
- the investee's receipt of additional funding at a lower valuation.

Investments that we identify as having an indicator of impairment are subject to further analysis to determine if the investment is other than temporarily impaired, in which case we write down the investment to its estimated fair value. We measure fair value using financial metrics and ratios of comparable public companies, or a discounted cash flow technique. Beginning in the first quarter of 2008, the assessment of fair value is based on the provisions of Statement of Financial Accounting Standards (SFAS) No. 157, Fair Value Measurements (SFAS No. 157). Non-marketable investments that are considered impaired are classified as Level 3 instruments (see Note 3: Fair Value in the Notes to

Consolidated Condensed Financial Statements of this Form 10-Q), as they use unobservable inputs and require management judgment due to the absence of quoted market prices, inherent lack of liquidity, and the long-term nature of such investments. The valuation of our non-marketable equity investments also takes into account movements of the equity and venture capital markets, recent financing activities by the investees, changes in the interest rate environment, the investee's capital structure, liquidation preferences for the investee's capital, and other economic variables. See Note 3: Fair Value in the Notes to Consolidated Condensed Financial Statements of this Form 10-Q for further discussion on the adoption of SFAS No. 157.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

Approximately \$3 million of our non-marketable equity investments as of March 29, 2008 were measured at fair value on a nonrecurring basis due to the recording of other-than-temporary impairment charges. Other-than-temporary impairments of non-marketable equity investments were \$33 million in the first quarter of 2008. These impairments represented most of the carrying value of the impaired non-marketable equity investments. Over the past 12 quarters, including the first quarter of 2008, impairments of non-marketable equity investments have averaged \$27 million per quarter (ranging from \$10 million to \$44 million per quarter).

Long-Lived Assets

We assess the impairment of long-lived assets when events or changes in circumstances indicate that the carrying value of the assets or the asset grouping may not be recoverable. Factors that we consider in deciding when to perform an impairment review include significant under-performance of a business or product line in relation to expectations, significant negative industry or economic trends, and significant changes or planned changes in our use of the assets. Recoverability of assets that will continue to be used in our operations is measured by comparing the carrying amount of the asset grouping to our estimate of the related total future undiscounted net cash flows. If an asset grouping's carrying value is not recoverable through the related undiscounted cash flows, the asset grouping is considered to be impaired. The impairment is measured by comparing the difference between the asset grouping's carrying amount and its fair value, based on the best information available, including market prices or discounted cash flow analysis. Impairments of long-lived assets are determined for groups of assets related to the lowest level of identifiable independent cash flows. Due to our asset usage model and the interchangeable nature of our semiconductor manufacturing capacity, we must make subjective judgments in determining the independent cash flows that can be related to specific asset groupings. In addition, as we make manufacturing process conversions and other factory planning decisions, we must make subjective judgments regarding the remaining useful lives of assets, primarily process-specific semiconductor manufacturing tools and building improvements. When we determine that the useful lives of assets are shorter than we had originally estimated, we accelerate the rate of depreciation over the assets' new, shorter useful lives. Over the past 12 quarters, including the first quarter of 2008, impairments and accelerated depreciation of long-lived assets have ranged between \$1 million and \$320 million per quarter. The restructuring related asset impairments have ranged between zero and \$317 million per quarter since the program began in the third quarter of 2006. Over the past 12 quarters, other asset impairments have ranged between \$1 million and \$26 million per quarter.

Long-lived assets such as goodwill, intangible assets, and property, plant, and equipment, are considered non-financial assets, and are only measured at fair value when indicators of impairment exist. Therefore, the accounting and disclosure provisions of SFAS No. 157 will not be effective for these assets until the first quarter of 2009. See Note 2: Recent Accounting Pronouncements and Accounting Changes in the Notes to Consolidated Condensed Financial Statements of this Form 10-Q for further discussion.

Income Taxes

We must make certain estimates and judgments in determining income tax expense for financial statement purposes. These estimates and judgments occur in the calculation of tax credits, benefits, and deductions, and in the calculation of certain tax assets and liabilities, which arise from differences in the timing of recognition of revenue and expense for tax and financial statement purposes, as well as the interest and penalties related to uncertain tax positions. Significant changes to these estimates may result in an increase or decrease to our tax provision in a subsequent period.

We must assess the likelihood that we will be able to recover our deferred tax assets. If recovery is not likely, we must increase our provision for taxes by recording a valuation allowance against the deferred tax assets that we estimate will not ultimately be recoverable. We believe that we will ultimately recover a substantial majority of the deferred tax assets recorded on our consolidated condensed balance sheets. However, should there be a change in our ability to recover our deferred tax assets, our tax provision would increase in the period in which we determined that the recovery was not likely.

The calculation of our tax liabilities involves dealing with uncertainties in the application of complex tax regulations. In accordance with Financial Accounting Standards Board (FASB) Interpretation No. 48, Accounting for Uncertainty in Income Taxes an interpretation of SFAS No. 109 (FIN 48), and related guidance, we recognize liabilities for uncertain tax positions based on a two-step process. The first step is to evaluate the tax position for recognition by determining if the weight of available evidence indicates that it is more likely than not that the position will be sustained on audit, including resolution of related appeals or litigation processes, if any. The second step requires us to estimate and measure the tax benefit as the largest amount that is more than 50% likely to be realized upon ultimate settlement. It is inherently difficult and subjective to estimate such amounts, as we have to determine the probability of various possible outcomes. We reevaluate these uncertain tax positions on a quarterly basis. This evaluation is based on factors including, but not limited to, changes in facts or circumstances, changes in tax law, effectively settled issues under audit, and new audit activity. Such a change in recognition or measurement would result in the recognition of a tax benefit or an additional charge to the tax provision.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

Inventory

The valuation of inventory requires us to estimate obsolete or excess inventory as well as inventory that is not of saleable quality. The determination of obsolete or excess inventory requires us to estimate the future demand for our products. The demand forecast is included in the development of our short-term manufacturing plans to enable consistency between inventory valuation and build decisions. Product-specific facts and circumstances reviewed in the inventory valuation process include a review of the customer base, the stage of the product life cycle of our products, consumer confidence, and customer acceptance of our products, as well as an assessment of the selling price in relation to the product cost. If our demand forecast for specific products is greater than actual demand and we fail to reduce manufacturing output accordingly, or if we fail to forecast the demand accurately, we could be required to write off inventory, which would negatively impact our gross margin.

Share-Based Compensation

Total share-based compensation during the first quarter of 2008 was \$219 million (\$284 million during the first quarter of 2007). Determining the appropriate fair-value model and calculating the fair value of employee stock options and rights to purchase shares under stock purchase plans at the date of grant require judgment. We use the Black-Scholes option pricing model to estimate the fair value of these share-based awards consistent with the provisions of SFAS No. 123 (revised 2004), Share-Based Payment (SFAS No. 123(R)). Option pricing models, including the Black-Scholes model, also require the use of input assumptions, including expected volatility, expected life, expected dividend rate, and expected risk-free rate of return. The assumptions for expected volatility and expected life are the two assumptions that significantly affect the grant date fair value. Changes in the expected dividend rate and expected risk-free rate of return do not significantly impact the calculation of fair value, and determining these inputs is not highly subjective.

We use implied volatility based on freely traded options in the open market, as we believe implied volatility is more reflective of market conditions and a better indicator of expected volatility than historical volatility. In determining the appropriateness of implied volatility, we considered the following:

- the volume of market activity of freely traded options, and determined that there was sufficient market activity;

- the ability to reasonably match the input variables of freely traded options to those of options granted by the company, such as the date of grant and the exercise price, and determined that the input assumptions were comparable; and

- the term of freely traded options used to derive implied volatility, which is generally one to two years, and determined that the length of term was sufficient.

Due to significant differences in the vesting terms and contractual life of current option grants compared to the majority of our historical grants, management does not believe that our historical share option exercise data provides us with sufficient evidence to estimate expected life. Therefore, we use the simplified method of calculating expected life described in the SEC's Staff Accounting Bulletin 107 (SAB 107), as amended by Staff Accounting Bulletin 110 (SAB 110). We will continue to use the simplified method until we have the historical data necessary to provide a reasonable estimate of expected life, in accordance with SAB 107, as amended by SAB 110.

Higher volatility and longer expected lives result in an increase to share-based compensation determined at the date of grant. The effect that changes in the volatility and the expected life would have on the weighted average fair value of option awards and the increase in total fair value during the first quarter of 2008 is as follows:

	Q1 2008
Weighted Average Fair Value	Increase in Total Fair Value¹

	Per Share	(in millions)
As reported	\$ 6.61	
Hypothetical:		
Increase expected volatility by 5 percentage points ²	\$ 7.36	\$ 1
Increase expected life by 1 year	\$ 6.87	\$

¹ *Amounts represent the hypothetical increase in the total fair value determined at the date of grant, which would be amortized over the service period, net of estimated forfeitures.*

² *For example, an increase from 38% reported volatility for Q1 2008 to a hypothetical 43% volatility. Since the adoption of SFAS No. 123(R), reported volatility has ranged from 25% to 38%.*

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

In addition, SFAS No. 123(R) requires us to develop an estimate of the number of share-based awards that will be forfeited due to employee turnover. Quarterly adjustments in the estimated forfeiture rates can have a significant effect on reported share-based compensation, as we recognize the cumulative effect of the rate adjustments for all expense amortization after January 1, 2006 in the period the estimated forfeiture rates are adjusted. We estimate and adjust forfeiture rates based on a quarterly review of recent forfeiture activity and expected future employee turnover. If a revised forfeiture rate is higher than the previously estimated forfeiture rate, we make an adjustment that will result in a decrease to the expense recognized in the financial statements. If a revised forfeiture rate is lower than the previously estimated forfeiture rate, we make an adjustment that will result in an increase to the expense recognized in the financial statements. These adjustments affect our gross margin; R&D expenses; and marketing, general and administrative expenses. The effect of forfeiture adjustments in the first quarter of 2008 was not significant. We record cumulative adjustments to the extent that the related expense is recognized in the financial statements, beginning with implementation of SFAS No. 123(R) in the first quarter of 2006. Adjustments in the estimated forfeiture rates could also cause changes in the amount of expense that we recognize in future periods.

Results of Operations - First Quarter of 2008 Compared to First Quarter of 2007

The following table sets forth certain consolidated condensed statements of income data as a percentage of net revenue for the periods indicated:

<u>(Dollars in Millions, Except Per Share Amounts)</u>	Q1 2008		Q1 2007	
	Dollars	% of Net Revenue	Dollars	% of Net Revenue
Net revenue	\$ 9,673	100.0%	\$ 8,852	100.0%
Cost of sales	4,466	46.2%	4,420	49.9%
Gross margin	5,207	53.8%	4,432	50.1%
Research and development	1,467	15.2%	1,400	15.8%
Marketing, general and administrative	1,349	13.9%	1,282	14.5%
Restructuring and asset impairment charges	329	3.4%	75	0.9%
Operating income	2,062	21.3%	1,675	18.9%
Gains (losses) on equity investments, net	(59)	(0.6)%	29	0.4%
Interest and other, net	168	1.7%	169	1.9%
Income before taxes	2,171	22.4%	1,873	21.2%
Provision for taxes	728	7.5%	237	2.7%
Net income	\$ 1,443	14.9%	\$ 1,636	18.5%
Diluted earnings per share	\$ 0.25		\$ 0.28	

The following table sets forth information of geographic regions for the periods indicated:

<u>(Dollars In Millions)</u>	Q1 2008		Q1 2007	
	Revenue	% of Total	Revenue	% of Total
Asia-Pacific	\$ 4,788	50%	\$ 4,432	50%

Edgar Filing: INTEL CORP - Form 10-Q

Americas	2,016	21%	1,727	20%
Europe	1,863	19%	1,722	19%
Japan	1,006	10%	971	11%
Total	\$ 9,673	100%	\$ 8,852	100%

Our net revenue for Q1 2008 was \$9.7 billion, an increase of 9% compared to Q1 2007. The increase was primarily due to significantly higher microprocessor unit sales, which were partially offset by lower microprocessor average selling prices.

Higher NAND flash memory revenue was partially offset by lower NOR flash memory revenue, which declined \$112 million to \$330 million in Q1 2008 due to lower NOR flash memory volume and average selling prices. Higher NAND flash memory revenue was due to an increase in unit sales associated with the ramp of our NAND flash memory business.

Revenue in the Americas region increased by 17% compared to Q1 2007. In addition, revenue in the Asia-Pacific and Europe regions each increased by 8% and revenue in the Japan region increased by 4% compared to Q1 2007.

Revenue from both mature and emerging markets increased in Q1 2008 compared to Q1 2007. Most of the revenue growth in mature markets occurred in the Asia-Pacific and Americas regions. A majority of the increase in emerging markets occurred in the Europe region.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

Our overall gross margin dollars for Q1 2008 were \$5.2 billion, an increase of \$775 million, or 17%, compared to Q1 2007. Our overall gross margin percentage increased to 53.8% in Q1 2008, from 50.1% in Q1 2007. The increase in gross margin percentage was primarily attributable to the gross margin percentage increase in the Digital Enterprise Group operating segment, partially offset by the gross margin percentage decline in the Mobility Group operating segment. We derived most of our overall gross margin dollars and operating profit in Q1 2008 and Q1 2007 from the sale of microprocessors in the Digital Enterprise Group and Mobility Group operating segments. See Business Outlook for a discussion of gross margin expectations.

Digital Enterprise Group

The revenue and operating income for the Digital Enterprise Group (DEG) operating segment for Q1 2008 and Q1 2007 were as follows:

<u>(In Millions)</u>	Q1 2008	Q1 2007
Microprocessor revenue	\$ 4,123	\$ 3,561
Chipset, motherboard, and other revenue	1,175	1,193
Net revenue	\$ 5,298	\$ 4,754
Operating income	\$ 1,722	\$ 931

Net revenue for the DEG operating segment increased by \$544 million, or 11%, in Q1 2008 compared to Q1 2007. Microprocessors within DEG include microprocessors designed for the desktop and enterprise computing market segments as well as embedded microprocessors. The increase in microprocessor revenue was due to higher enterprise unit sales, and to a lesser extent, higher desktop unit sales. This higher mix of enterprise microprocessor unit sales also had a positive impact on total average selling prices within the DEG operating segment. Chipset, motherboard, and other revenue was approximately flat, with lower motherboard unit sales offset by higher chipset revenue.

Operating income increased by \$791 million, or 85%, in Q1 2008 compared to Q1 2007. The increase in operating income was due to higher microprocessor revenue, and to a lesser extent, lower desktop microprocessor unit costs, lower factory underutilization charges of \$130 million, and lower start-up costs of \$150 million, primarily due to the completion of the startup phase and qualification for sale of our 45-nanometer process technology. These increases were partially offset by sales in Q1 2007 of desktop microprocessor inventory that had been previously written off.

Mobility Group

The revenue and operating income for the Mobility Group (MG) operating segment for Q1 2008 and Q1 2007 were as follows:

<u>(In Millions)</u>	Q1 2008	Q1 2007
Microprocessor revenue	\$ 2,726	\$ 2,441
Chipset and other revenue	943	866
Net revenue	\$ 3,669	\$ 3,307
Operating income	\$ 1,185	\$ 1,382

Net revenue for the MG operating segment increased by \$362 million, or 11%, in Q1 2008 compared to Q1 2007. The increase in microprocessor revenue was due to significantly higher unit sales, partially offset by significantly lower average selling prices. The increase in chipset and other revenue was due to higher unit sales of chipsets, partially offset by lower revenue from sales of cellular baseband products. We are winding down the sales from the manufacturing agreement entered into as part of the divestiture of the cellular baseband products business.

Operating income decreased by \$197 million, or 14%, in Q1 2008 compared to Q1 2007. The decrease in operating income was primarily due to higher operating expenses related to process development and advertising. Higher chipset unit costs and sales in Q1 2007 of mobility microprocessor inventory that had been previously written off were more than offset by lower microprocessor unit costs and higher microprocessor and chipset revenue.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)
Operating Expenses

Operating expenses for Q1 2008 and Q1 2007 were as follows:

<u>(In Millions)</u>	Q1 2008	Q1 2007
Research and development	\$ 1,467	\$ 1,400
Marketing, general and administrative	\$ 1,349	\$ 1,282
Restructuring and asset impairment charges	\$ 329	\$ 75

Research and Development. R&D spending increased \$67 million, or 5%, in Q1 2008 compared to Q1 2007. This increase was primarily due to higher product development costs as we began development of our 32nm process technology.

Marketing, General and Administrative. Marketing, general and administrative expenses increased \$67 million, or 5%, in Q1 2008 compared to Q1 2007. This increase was primarily due to general corporate and advertising expenses. R&D along with marketing, general and administrative expenses were 29% of net revenue in Q1 2008 (30% of net revenue in Q1 2007).

Restructuring and Asset Impairment Charges. In Q3 2006, management approved several actions as part of a restructuring plan designed to improve operational efficiency and financial results. Restructuring and asset impairment charges for Q1 2008 and Q1 2007 were as follows:

<u>(In Millions)</u>	Q1 2008	Q1 2007
Employee severance and benefit arrangements	\$ 54	\$ 21
Asset impairment charges	275	54
Total restructuring and asset impairment charges	\$ 329	\$ 75

During Q1 2008, we incurred \$275 million in asset impairment charges related to assets which were sold subsequent to quarter end in conjunction with the divestiture of our NOR flash memory business. The impairment charges were determined using the revised fair value that we received upon completion of the divestiture, less selling costs. The lower fair value was primarily a result of a decline in the outlook for the flash memory market segment. See Note 12: Divestitures in the Notes to Consolidated Condensed Financial Statements of this Form 10-Q for further discussion. In Q1 2007, we incurred \$54 million in asset impairment charges as a result of softer than anticipated market conditions related to the Colorado Springs, Colorado facility, which has been placed for sale.

Restructuring and asset impairment activity for Q1 2008 was as follows:

<u>(In Millions)</u>	Employee Severance and Benefits	Asset Impairments	Total
Accrued restructuring balance as of December 29, 2007	\$ 127	\$	\$ 127
Additional accruals	57	275	332
Adjustments	(3)		(3)
Cash payments	(83)		(83)
Non-cash settlements		(275)	(275)
Accrued restructuring balance as of March 29, 2008	\$ 98	\$	\$ 98

We recorded the additional accruals, net of adjustments, as restructuring and asset impairment charges. The remaining accrual as of March 29, 2008 was related to severance benefits that we recorded as a current liability within accrued compensation and benefits.

From Q3 2006 through Q1 2008, we incurred a total of \$1.4 billion in restructuring and asset impairment charges related to this plan. These charges included a total of \$581 million related to employee severance and benefit arrangements due to the termination of approximately 10,400 employees, of which 8,700 employees had left the company as of March 29, 2008. A substantial majority of these employee terminations affected employees within manufacturing, information technology, and marketing. Of the employee severance and benefit charges incurred as of March 29, 2008, we had paid \$483 million. The restructuring and asset impairment charges also included \$819 million in asset impairment charges.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

We estimate that employee severance and benefit charges to date will result in gross annual savings of approximately \$1.0 billion, a portion of which we began to realize as early as Q3 2006. We are realizing these savings within marketing, general and administrative expenses, cost of sales, and R&D. Our outlook for Q2 2008 is for additional restructuring and asset impairment charges of \$250 million. We may incur additional restructuring charges in the future for employee severance and benefit arrangements, as well as facility-related or other exit activities.

Gains (Losses) on Equity Investments, Interest and Other, and Provision for Taxes

Gains (losses) on equity investments, net; interest and other, net; and provision for taxes for Q1 2008 and Q1 2007 were as follows:

<u>(In Millions)</u>	Q1 2008	Q1 2007
Gains (losses) on equity investments, net	\$ (59)	\$ 29
Interest and other, net	\$ 168	\$ 169
Provision for taxes	\$ (728)	\$ (237)

Gains (losses) on equity investments, net, for Q1 2008 was a net loss of \$59 million compared to a net gain of \$29 million in Q1 2007. In Q1 2008, we recognized higher losses from our equity method investments, primarily from our investment in Clearwire Corporation. In addition, gains (losses) on equity investments, net, for Q1 2007 included a gain of \$39 million as a result of the initial public offering of Clearwire.

Interest and other, net was approximately flat at \$168 million in Q1 2008 compared to \$169 million in Q1 2007.

Approximately \$60 million of fair value losses experienced in Q1 2008 on our trading assets were offset by a \$39 million gain on divestiture in Q1 2008 and higher interest income. Interest income was higher in Q1 2008 compared to Q1 2007 as a result of higher average investment balances, partially offset by lower interest rates.

For details of our net losses recognized within gains (losses) on equity investments, net and interest and other, net, attributable to financial instruments categorized as Level 3 under the SFAS No. 157 hierarchy, see Note 3: Fair Value in the Notes to Consolidated Condensed Financial Statements of this Form 10-Q and Liquidity and Capital Resources within MD&A.

Our effective income tax rate was 33.5% in Q1 2008 compared to 12.7% in Q1 2007. The tax rate for Q1 2008 was negatively impacted by a higher percentage of our profits being derived from higher-tax jurisdictions compared to Q1 2007 and the tax effects of asset impairment charges related to our NOR flash memory business. The rate for Q1 2007 was positively impacted by a settlement with the U.S. Internal Revenue Service (IRS).

Liquidity and Capital Resources

Cash, short-term investments, fixed-income debt instruments included in trading assets, and debt at the end of each period were as follows:

<u>(Dollars in Millions)</u>	March 29, 2008	Dec. 29, 2007
Cash, short-term investments, and fixed income debt instruments included in trading assets	\$ 13,238	\$ 14,871
Short-term and long-term debt	\$ 2,179	\$ 2,122
Debt as % of stockholders' equity	5.4%	5.0%

In summary, our cash flows were as follows:

<u>(In Millions)</u>	Three Months Ended	
	March 29, 2008	March 31, 2007
Net cash provided by operating activities	\$ 2,215	\$ 1,552
Net cash used for investing activities	(921)	(3,216)

Edgar Filing: INTEL CORP - Form 10-Q

Net cash used for financing activities	(2,718)	(462)
Net (decrease) in cash and cash equivalents	\$ (1,424)	\$ (2,126)

30

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)***Operating Activities***

Cash provided by operating activities is net income adjusted for certain non-cash items and changes in assets and liabilities. The increase in cash provided by operating activities for the first quarter of 2008 as compared to the first quarter of 2007 is due to a reduction in income taxes payable in Q1 2007 related to the settlement with the IRS, compared to an increase in taxes payable in the first quarter of 2008. Higher payments for employee bonuses were partially offset by lower trading asset activity. Trading asset activity decreased as our marketable debt instruments classified as trading assets in the first quarter of 2008 are included in investing activity due to the adoption of SFAS No. 159, The Fair Value Option for Financial Assets and Financial Liabilities Including an amendment of FASB Statement No. 115 (SFAS No. 159).

Accounts receivable were higher compared to December 29, 2007, despite decreased revenue, due to a higher proportion of sales occurring at the end of the first quarter of 2008 and lower cash collections. For the first quarter of 2008, our two largest customers accounted for 38% of net revenue (34% for the first quarter of 2007), with each of these customers accounting for 19% of revenue. Additionally, these two largest customers accounted for 41% of net accounts receivable at March 29, 2008 (33% at March 31, 2007).

Investing Activities

Investing cash flows consist primarily of capital expenditures and net investment purchases, maturities, and disposals, and purchases and investments in non-marketable and other investments. The decrease in cash used in investing activities in the first quarter of 2008, compared to the first quarter of 2007, was primarily due to an increase in maturities and a decrease in purchases of available-for-sale investments as well as lower capital spending. Purchases and investments in non-marketable equity investments were lower in the first quarter of 2008 due to an additional \$288 million investment in IMFT in the first quarter of 2007. In addition, due to the adoption of SFAS No. 159, purchases and maturities for marketable debt instruments classified as trading assets are included in investing activity for the first quarter of 2008.

Financing Activities

Financing cash flows consist primarily of repurchases and retirement of common stock, payment of dividends to stockholders, and proceeds from sales of shares through employee equity incentive plans.

The higher cash used in financing activities in the first quarter of 2008, compared to the first quarter of 2007, was primarily due to an increase in repurchases and retirement of common stock. For the first quarter of 2008, we purchased 121.9 million shares of common stock as part of our common stock repurchase program at a cost of \$2.5 billion compared to 19.2 million shares for \$400 million in the first quarter of 2007. As of March 29, 2008, \$12.0 billion remained available for repurchase under the existing repurchase authorization of \$25 billion. We base our level of stock repurchases on internal cash management decisions, and this level may fluctuate. Our dividend payment was \$739 million in the first quarter of 2008, higher than the \$650 million paid in the same period of the prior year, due to an increase from \$0.1125 to \$0.1275 in quarterly cash dividends per common share effective for the first quarter of 2008. On March 19, 2008, our Board of Directors declared a cash dividend of \$0.14 per common share for the second quarter of 2008, which represents an additional 10% increase in our quarterly cash dividend amount. Additional financing activities for the first quarter of 2008 include proceeds from the sale of shares pursuant to employee equity incentive plans of \$468 million (\$586 million during the first quarter of 2007).

Liquidity

Cash generated by operations is used as our primary source of liquidity. As of March 29, 2008, we also had an investment portfolio valued at \$17.7 billion, consisting of cash and cash equivalents, fixed-income trading assets, and short- and long-term investments. Substantially all of our investments in debt instruments are with A/A2 or better rated issuers, and the substantial majority of the issuers are rated AA-/Aa2 or better. As of March 29, 2008, \$11.6 billion of our portfolio had a remaining maturity of less than one year. During the first quarter of 2008, we did not recognize significant other-than-temporary impairments on our portfolio of available-for-sale investments. As of March 29, 2008, our cumulative unrealized losses, net of corresponding hedging activities, related to debt instruments classified as trading assets was \$58 million, of which a loss of \$35 million was recognized in the first quarter of 2008.

As of March 29, 2008, our cumulative unrealized losses, net of corresponding hedging activities, related to debt instruments classified as available-for-sale was \$66 million. These unrealized losses were insignificant in relation to our total available-for-sale portfolio. Substantially all of our unrealized losses can be attributed to fair value fluctuations in an unstable credit environment.

Our portfolio includes \$1.8 billion of asset-backed securities as of March 29, 2008. Approximately one-third of these securities were collateralized by first-lien mortgages, and the remaining were collateralized by credit card debt, student loans, or auto loans. During the first quarter of 2008, our asset-backed securities experienced net unrealized fair value declines totaling \$37 million, of which \$34 million was recognized in our consolidated condensed statements of income. As of March 29, 2008, substantially all of our investments in asset-backed securities were rated AAA/Aaa, and the expected weighted average remaining maturity was less than two years.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

We have the intent and ability to hold our debt investments that have unrealized losses in accumulated other comprehensive income for a sufficient period of time to allow for recovery of the principal amounts invested. We continually monitor the credit risk in our portfolio and mitigate our credit and interest rate exposures in accordance with the policies approved by our Board of Directors. We intend to continue to closely monitor future developments in the credit markets and make appropriate changes to our investment policy as deemed necessary. Based on our ability to liquidate our investment portfolio and our expected operating cash flows, we do not anticipate any liquidity constraints as a result of either the current credit environment or potential investment fair value fluctuations.

Another potential source of liquidity is authorized borrowings for commercial paper, of up to \$3.0 billion. There were no borrowings under our commercial paper program during the first quarter of 2008. Our commercial paper was rated A-1+ by Standard & Poor's and P-1 by Moody's as of March 29, 2008. We also have an automatic shelf registration statement on file with the SEC pursuant to which we may offer an indeterminate amount of debt, equity, and other securities.

We believe that we have the financial resources needed to meet business requirements for the next 12 months, including capital expenditures for the expansion or upgrading of worldwide manufacturing and assembly and test capacity, working capital requirements, the dividend program, potential stock repurchases, and potential acquisitions or strategic investments.

Off-Balance-Sheet Arrangements

As of March 29, 2008, we did not have any significant off-balance-sheet arrangements, as defined in Item 303(a)(4)(ii) of SEC Regulation S-K. Subsequent to the end of the first quarter, we have guaranteed the repayment of \$275 million in principal of Numonyx's payment obligations under its senior credit facility, as well as accrued unpaid interest, expenses of the lenders and penalties. See Note 12: Divestitures in the Notes to Consolidated Condensed Financial Statements of this Form 10-Q for further discussion.

Fair Value

Beginning in the first quarter of 2008, the assessment of fair value for our financial instruments is based on the provisions of SFAS No. 157. SFAS No. 157 establishes a fair value hierarchy that is based on three levels of inputs and requires an entity to maximize the use of observable inputs and minimize the use of unobservable inputs when measuring fair value. When values are determined using inputs that are both unobservable and significant to the values of the instruments being measured, we classify those instruments as Level 3 under the SFAS No. 157 hierarchy.

As of March 29, 2008, our portfolio of financial instruments measured at fair value on a recurring basis included \$18.6 billion of assets and \$320 million of liabilities. Of these assets, \$3.2 billion (17%) were classified as Level 3 instruments. Of these liabilities, \$160 million (50%) were classified as Level 3 instruments. Assets classified as Level 3 included net transfers from Level 2 to Level 3 of approximately \$455 million in the first quarter of 2008. These assets primarily consisted of floating-rate notes and were transferred from Level 2 to Level 3 due to limited availability of observable market data with which to value or corroborate the value of our instruments. During the first quarter of 2008, we recognized an insignificant amount of losses on these instruments.

During the first quarter of 2008, the Level 3 assets and liabilities in our portfolio of financial instruments that are measured at fair value on a recurring basis experienced net unrealized fair value declines totaling \$49 million. Of these declines, \$37 million were recognized in our consolidated condensed statements of income. We believe the remaining \$12 million, included in other comprehensive income, represents a temporary decline in the fair value of available-for-sale investments. We did not experience any realized gains (losses) related to the Level 3 assets or liabilities in our portfolio.

As of March 29, 2008, investments in floating-rate notes and corporate bonds represented \$8.4 billion (45%) of our portfolio of assets measured at fair value on a recurring basis. Of these instruments, \$189 million were classified as Level 1 because their valuations were based on quoted prices for identical securities in active markets. Another \$6.8 billion were classified as Level 2 because their valuations were based on one of the following:

quoted prices for identical securities from markets that are less active;

quoted prices for similar securities;

indicator prices corroborated by observable market quotes; or

pricing models with all significant inputs derived from or corroborated by observable market data.

The remaining \$1.4 billion of these instruments, the substantial majority of them floating-rate notes, were classified as Level 3 because their valuations were based on either: non-binding broker quotes; or indicator prices that we were unable to corroborate with observable market quotes.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

As of March 29, 2008, investments in commercial paper, bank time deposits, and money market fund deposits represented \$6.9 billion (37%) of our portfolio of assets measured at fair value on a recurring basis. Of these instruments, all \$1.9 billion of the money market fund deposits were classified as Level 1. The remaining instruments were classified as Level 2 because their valuations were based on pricing models with all significant inputs derived from or corroborated by observable market data.

As of March 29, 2008, investments in asset-backed securities represented \$1.8 billion (10%) of our portfolio of assets measured at fair value on a recurring basis. All of these instruments were classified as Level 3, and substantially all of them were valued using indicator prices that we were not able to corroborate by observable market quotes due to the lack of visibility and/or liquidity in the market for asset-backed securities.

As of March 29, 2008, investments in marketable equity securities represented \$530 million (3%) of our portfolio of assets measured at fair value on a recurring basis. Of these instruments, \$38 million were classified as Level 1 because their valuations were based on quoted prices for identical securities in active markets. The remaining \$492 million were classified as Level 2 because their valuations were either based on quoted prices for identical securities in less active markets or adjusted for security specific restrictions. The fair values of two of these investments, VMware, Inc. (\$396 million) and Micron (\$90 million), constituted substantially all of the fair values of the marketable equity securities that we classified as Level 2. In measuring the fair value of our investment in VMware, our valuation reflects a discount from the quoted price of VMware's stock due to a transfer restriction. In measuring the fair value of our investment in Micron, our valuation reflects a discount from the quoted market price of Micron's stock due to our investment being in a form of rights exchangeable into unregistered Micron stock.

As of March 29, 2008, investments in equity securities offsetting deferred compensation represented \$454 million (2%) of our portfolio of assets measured at fair value on a recurring basis. All of these instruments were classified as Level 1 because their valuations were based on quoted prices for identical securities in active markets.

Business Outlook

Our future results of operations and the topics of other forward-looking statements contained in this Form 10-Q, including this MD&A, involve a number of risks and uncertainties in particular, our goals and strategies; new product introductions; plans to cultivate new businesses; pending divestitures; future economic conditions; revenue; pricing; gross margin and costs; capital spending; depreciation; R&D expenses; marketing, general and administrative expenses; potential impairment of investments; our effective tax rate; pending legal proceedings; net gains (losses) from equity investments; and interest and other, net. We are focusing on efforts to improve operational efficiency and reduce spending that may result in several actions that could have an impact on expense levels and gross margin. In addition to the various important factors discussed above, a number of other important factors could cause actual results to differ materially from our expectations. See the risks described in Risk Factors in Part II, Item 1A of this Form 10-Q.

Our expectations for the second quarter of 2008 are as follows:

Revenue: between \$9.0 billion and \$9.6 billion, compared to first quarter revenue of \$9.7 billion. The expectation reflects a significant reduction in NOR flash memory revenue as a result of the Numonyx transaction.

Gross margin: 56% plus or minus a couple points. The 56% midpoint is higher than our gross margin of 53.8% in the first quarter of 2008, primarily due to the NOR divestiture and lower chipset inventory write-offs.

Depreciation: approximately \$1.1 billion.

Total spending: spending on R&D, plus marketing, general and administrative expenses is expected to be between \$2.8 billion and \$2.9 billion, approximately flat compared to the first quarter of 2008.

Restructuring and asset impairment charges: approximately \$250 million.

Net gains from equity investments and interest and other: approximately \$75 million.

Tax rate: approximately 33%. The estimated effective tax rate is based on tax law in effect as of March 29, 2008 and current expected income.

Our expectations for fiscal year 2008 are as follows:

Gross margin: 57% plus or minus a few points.

Depreciation: approximately \$4.4 billion, plus or minus \$100 million.

R&D spending: approximately \$6.0 billion, slightly higher than our previous expectation of \$5.9 billion.

Marketing, general and administrative expenses: approximately \$5.5 billion.

Capital spending: approximately \$5.2 billion, plus or minus \$200 million.

Tax rate: approximately 33% for the third and fourth quarters. The estimated effective tax rate is based on tax law in effect as of March 29, 2008 and current expected income.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

Status of Business Outlook and Scheduled Business Update

We expect that our corporate representatives will, from time to time, meet privately with investors, investment analysts, the media, and others, and may reiterate the forward-looking statements contained in the Business Outlook section and elsewhere in this Form 10-Q, including any such statements that are incorporated by reference in this Form 10-Q. At the same time, we will keep this Form 10-Q and our most current business outlook publicly available on our Investor Relations web site at www.intc.com. The public can continue to rely on the business outlook published on the web site as representing our current expectations on matters covered, unless we publish a notice stating otherwise. The statements in the Business Outlook and other forward-looking statements in this Form 10-Q are subject to revision during the course of the year in our quarterly earnings releases and SEC filings and at other times. From the close of business on May 30, 2008 until our quarterly earnings release is published, presently scheduled for July 15, 2008, we will observe a quiet period. During the quiet period, the Business Outlook and other forward-looking statements first published in our Form 8-K filed on April 15, 2008, as reiterated or updated as applicable, in this Form 10-Q, should be considered historical, speaking as of prior to the quiet period only, and not subject to update. During the quiet period, our representatives will not comment on our business outlook or our financial results or expectations. The exact timing and duration of the routine quiet period, and any others that we utilize from time to time, may vary at our discretion.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

The information in this section should be read in connection with the information on financial market risk related to changes in non-U.S. currency exchange rates in Part II, Item 7A, Quantitative and Qualitative Disclosures About Market Risk, in our Annual Report on Form 10-K for the year ended December 29, 2007. Estimates below are not necessarily indicative of future performance, and actual results may differ materially.

Interest Rates

We are exposed to interest rate risk related to our investment portfolio and debt issuances. The primary objective of our investments in debt instruments is to preserve principal while maximizing yields. To achieve this objective, the returns on all of our investments in debt instruments are generally based on three-month LIBOR, or, if the maturities are longer than three months, the returns are generally swapped into U.S. dollar three-month LIBOR-based returns. We considered the historical volatility of the interest rates experienced in prior years and the duration of our investment portfolio and debt issuances, and determined that it was reasonably possible that an adverse change of 80 basis points (0.80%), approximately 30% of the rate as of March 29, 2008 (17% of the rate as of December 29, 2007), could be experienced in the near term. A hypothetical 0.80% decrease in interest rates, after taking into account hedges and offsetting positions, would have resulted in a decrease in the fair value of our net investment position of approximately \$5 million as of March 29, 2008 and \$65 million as of December 29, 2007. The \$5 million reflects only the direct impact of the change in interest rates. Other economic variables, such as equity market fluctuations and changes in relative credit risk, could result in a significantly higher decline in our net investment portfolio.

Equity Prices

Our marketable equity investments include marketable equity instruments, equity derivative instruments such as warrants and options, and marketable equity method investments. To the extent that our marketable equity instruments have strategic value, we typically do not attempt to reduce or eliminate our market exposure; however, for our investments in strategic equity derivative instruments, including warrants, we may enter into transactions to reduce or eliminate the market risks. For instruments that we no longer consider strategic, we evaluate legal, market, and economic factors in our decision on the timing of disposal and whether it is possible and appropriate to hedge the equity market risk.

The marketable equity instruments included in trading assets are held to generate returns that offset changes in liabilities related to the equity market risk of certain deferred compensation arrangements. The gains and losses from changes in fair value of these equity instruments are generally offset by the gains and losses on the related liabilities, resulting in a net exposure of less than \$15 million as of March 29, 2008 (less than \$10 million as of December 29, 2007), assuming a reasonably possible decline in market prices of approximately 15% in the near term (10% at December 29, 2007).

As of March 29, 2008, the fair value of our marketable equity securities and equity derivative instruments, including hedging positions, was \$550 million (\$1.0 billion as of December 29, 2007). Our investments in VMware and Micron constituted 88% of our marketable equity securities as of March 29, 2008, and were carried at a fair market value of \$396 million and \$90 million, respectively. Our marketable equity method investment had a carrying value of \$471 million and a fair value of \$528 million as of March 29, 2008.

To assess the market price sensitivity of our marketable equity investments, we analyzed the historical movements over the past several years of high-technology stock indices that we considered appropriate. For our investments in companies that have been publicly traded for only a limited time, we analyzed the implied volatility of the related company based on freely traded options. Our marketable equity method investment is excluded from our analysis, as the carrying value does not fluctuate based on market price changes. Therefore, the potential fair value decline would not be indicative of the impact on our financial statements, unless an other-than-temporary impairment was deemed necessary. Based on our sensitivity analysis, we estimated that it was reasonably possible that the prices of the stocks of our marketable equity securities could experience a loss of 50% in the near term (55% as of December 29, 2007). Assuming a loss of 50% in market prices, and after reflecting the impact of hedges and offsetting positions, the aggregate value of our marketable equity securities could decrease by approximately \$280 million, based on the value as of March 29, 2008 (a decrease in value of \$565 million, based on the value as of December 29, 2007 using an assumed loss of 55%).

Many of the same factors that could result in an adverse movement of equity market prices affect our non-marketable equity investments, although we cannot quantify the impact directly. Such a movement and the underlying economic conditions would negatively affect the prospects of the companies we invest in, their ability to raise additional capital, and the likelihood of our being able to realize value in our investments through liquidity events such as initial public offerings, mergers, and private sales. These types of investments involve a great deal of risk, and there can be no assurance that any specific company will grow or become successful; consequently, we could lose all or part of our investment. Our non-marketable equity investments, excluding investments accounted for under the equity method, had a carrying amount of \$836 million as of March 29, 2008 (\$805 million as of December 29, 2007). As of March 29, 2008, the carrying amount of our non-marketable equity method investments was \$2.7 billion (\$2.6 billion as of December 29, 2007) and consisted primarily of our investment in IMFT of \$2.2 billion (\$2.2 billion as of December 29, 2007).

ITEM 4. CONTROLS AND PROCEDURES

Evaluation of Disclosure Controls and Procedures

Based on management's evaluation (with the participation of our Chief Executive Officer (CEO) and Chief Financial Officer (CFO)), as of the end of the period covered by this report, our CEO and CFO have concluded that our disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934, as amended, (the Exchange Act)) are effective to provide reasonable assurance that information required to be disclosed by us in reports that we file or submit under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in Securities and Exchange Commission rules and forms and is accumulated and communicated to management, including our principal executive officer and principal financial officer, as appropriate to allow timely decisions regarding required disclosure.

Changes in Internal Control over Financial Reporting

There were no changes to our internal control over financial reporting (as defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act) that occurred during the period covered by this report that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Inherent Limitations on Effectiveness of Controls

Our management, including the CEO and CFO, does not expect that our Disclosure Controls or our internal control over financial reporting will prevent or detect all error and all fraud. A control system, no matter how well designed and operated, can provide only reasonable, not absolute, assurance that the control system's objectives will be met. The design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Further, because of the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that misstatements due to error or fraud will not occur or that all control issues and instances of fraud, if any, have been detected. These inherent limitations include the realities that judgments in decision-making can be faulty and that breakdowns can occur because of simple error or mistake. Controls can also be circumvented by the individual acts of some persons, by collusion of two or more people, or by management override of the controls. The design of any system of controls is based in part on certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions. Projections of any evaluation of controls effectiveness to future periods are subject to risks. Over time, controls may become inadequate because of changes in conditions or deterioration in the degree of compliance with policies or procedures.

PART II OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

For a discussion of legal proceedings, see Note 16: Contingencies in the Notes to Consolidated Condensed Financial Statements of this Form 10-Q.

ITEM 1A. RISK FACTORS

We describe our business risk factors below. This description includes any material changes to and supersedes the description of the risk factors associated with our business previously disclosed in Part I, Item 1A of our Annual Report on Form 10-K for the fiscal year ended December 29, 2007.

Fluctuations in demand for our products may harm our financial results and are difficult to forecast.

If demand for our products fluctuates, our revenue and gross margin could be harmed. Important factors that could cause demand for our products to fluctuate include:

- changes in business and economic conditions, including a downturn in the semiconductor industry and/or the overall economy;

- changes in consumer confidence caused by changes in market conditions, including changes in the credit market;

- competitive pressures, including pricing pressures, from companies that have competing products, chip architectures, manufacturing technologies, and marketing programs;

- changes in customer product needs;

- changes in the level of customers' components inventory;

- strategic actions taken by our competitors; and

- market acceptance of our products.

If product demand decreases, our manufacturing or assembly and test capacity could be underutilized, and we may be required to record an impairment on our long-lived assets including facilities and equipment, as well as intangible assets, which would increase our expenses. In addition, factory-planning decisions may shorten the useful lives of long-lived assets, including facilities and equipment, and cause us to accelerate depreciation. In the long term, if product demand increases, we may not be able to add manufacturing or assembly and test capacity fast enough to meet market demand. These changes in demand for our products, and changes in our customers' product needs, could have a variety of negative effects on our competitive position and our financial results, and, in certain cases, may reduce our revenue, increase our costs, lower our gross margin percentage, or require us to recognize impairments of our assets. In addition, if product demand decreases or we fail to forecast demand accurately, we could be required to write off inventory or record underutilization charges, which would have a negative impact on our gross margin.

The semiconductor industry and our operations are characterized by a high percentage of costs that are fixed or difficult to reduce in the short term, and by product demand that is highly variable and subject to significant downturns that may harm our business, results of operations, and financial condition.

The semiconductor industry and our operations are characterized by high costs, such as those related to facility construction and equipment, R&D, and employment and training of a highly skilled workforce, that are either fixed or difficult to reduce in the short term. At the same time, demand for our products is highly variable and there have been downturns, often in connection with maturing product cycles as well as downturns in general economic market conditions. These downturns have been characterized by reduced product demand, manufacturing overcapacity, high inventory levels, and lower average selling prices. The combination of these factors may cause our revenue, gross margin, cash flow, and profitability to vary significantly in both the short and long term.

We operate in intensely competitive industries, and our failure to respond quickly to technological developments and incorporate new features into our products could harm our ability to compete.

We operate in intensely competitive industries that experience rapid technological developments, changes in industry standards, changes in customer requirements, and frequent new product introductions and improvements. If we are unable to respond quickly and successfully to these developments, we may lose our competitive position, and our products or technologies may become uncompetitive or obsolete. To compete successfully, we must maintain a successful R&D effort, develop new products and production processes, and improve our existing products and processes at the same pace or ahead of our competitors. We may not be able to develop and market these new products successfully, the products we invest in and develop may not be well received by customers, and products developed and new technologies offered by others may affect demand for our products. These types of events could have a variety of negative effects on our competitive position and our financial results, such as reducing our revenue, increasing our costs, lowering our gross margin percentage, and requiring us to recognize impairments of our assets.

Fluctuations in the mix of products sold may harm our financial results.

Because of the wide price differences both among and within mobile, desktop, and server microprocessors, the mix and types of performance capabilities of microprocessors sold affect the average selling price of our products and have a substantial impact on our revenue and gross margin. Our financial results also depend in part on the mix of other products that we sell, such as chipsets, flash memory, and other semiconductor products. In addition, more recently introduced products tend to have higher associated costs because of initial overall development and production ramp. Fluctuations in the mix and types of our products may also affect the extent to which we are able to recover the fixed costs and investments associated with a particular product, and as a result can harm our financial results.

Our global operations subject us to risks that may harm our results of operations and financial condition.

We have sales offices, R&D, manufacturing, and assembly and test facilities in many countries, and as a result, we are subject to risks associated with doing business globally. Our global operations may be subject to risks that may limit our ability to manufacture, assemble and test, design, develop, or sell products in particular countries, which could, in turn, harm our results of operations and financial condition, including:

- security concerns, such as armed conflict and civil or military unrest, crime, political instability, and terrorist activity;

- health concerns;

- natural disasters;

- inefficient and limited infrastructure and disruptions, such as large-scale outages or interruptions of service from utilities or telecommunications providers and supply chain interruptions;

- differing employment practices and labor issues;

- local business and cultural factors that differ from our normal standards and practices;

- regulatory requirements and prohibitions that differ between jurisdictions; and

- restrictions on our operations by governments seeking to support local industries, nationalization of our operations, and restrictions on our ability to repatriate earnings.

In addition, although most of our products are priced and paid for in U.S. dollars, a significant amount of certain types of expenses, such as payroll, utilities, tax, and marketing expenses, are paid in local currencies. Our hedging programs reduce, but do not entirely eliminate, the impact of currency exchange rate movements, and therefore fluctuations in exchange rates could harm our business operating results and financial condition. In addition, changes in tariff and import regulations and to U.S. and non-U.S. monetary policies may harm our operating results and financial condition by increasing our expenses and reducing our revenue. Varying tax rates in different jurisdictions could harm our operating results and financial condition by increasing our overall tax rate.

We also maintain a program of insurance coverage for various types of property, casualty, and other risks. We place our insurance coverage with various carriers in numerous jurisdictions. The types and amounts of insurance that we obtain vary from time to time and from location to location, depending on availability, cost, and our decisions with respect to risk retention. The policies are subject to deductibles and exclusions that result in our retention of a level of risk on a self-insurance basis. Losses not covered by insurance may be substantial and may increase our expenses, which could harm our results of operations and financial condition.

Failure to meet our production targets, resulting in undersupply or oversupply of products, may harm our business and results of operations.

Production of integrated circuits is a complex process. Disruptions in this process can result from interruptions in our processes, errors, and difficulties in our development and implementation of new processes; defects in materials; disruptions in our supply of materials or resources; and disruptions at our fabrication and assembly and test facilities

due to, for example, accidents, maintenance issues, or unsafe working conditions all of which could affect the timing of production ramps and yields. We may not be successful or efficient in developing or implementing new production processes. The occurrence of any of the foregoing may result in our failure to meet or increase production as desired, resulting in higher costs or substantial decreases in yields, which could affect our ability to produce sufficient volume to meet specific product demand. The unavailability or reduced availability of certain products could make it more difficult to implement our platform strategy. We may also experience increases in yields. A substantial increase in yields could result in higher inventory levels and the possibility of resulting excess capacity charges as we slow production to reduce inventory levels. The occurrence of any of these events could harm our business and results of operations.

We may have difficulties obtaining the resources or products we need for manufacturing, assembling and testing our products, or operating other aspects of our business, which could harm our ability to meet demand for our products and may increase our costs.

We have thousands of suppliers providing various materials that we use in the production of our products and other aspects of our business, and we seek, where possible, to have several sources of supply for all of those materials. However, we may rely on a single or a limited number of suppliers, or upon suppliers in a single country, for these materials. The inability of such suppliers to deliver adequate supplies of production materials or other supplies could disrupt our production processes or could make it more difficult for us to implement our business strategy. In addition, production could be disrupted by the unavailability of the resources used in production, such as water, silicon, electricity, and gases. The unavailability or reduced availability of the materials or resources that we use in our business may require us to reduce production of products or may require us to incur additional costs in order to obtain an adequate supply of those materials or resources. The occurrence of any of these events could harm our business and results of operations.

Costs related to product defects and errata may harm our results of operations and business.

Costs associated with unexpected product defects and errata (deviations from published specifications) due to, for example, unanticipated problems in our manufacturing processes include, costs such as:

writing off the value of inventory of defective products;

disposing of defective products that cannot be fixed;

recalling defective products that have been shipped to customers;

providing product replacements for, or modifications to, defective products; and/or

defending against litigation related to defective products.

These costs could be substantial and may therefore increase our expenses and lower our gross margin. In addition, our reputation with our customers or users of our products could be damaged as a result of such product defects and errata, and the demand for our products could be reduced. These factors could harm our financial results and the prospects for our business.

We may be subject to claims of infringement of third-party intellectual property rights, which could harm our business.

From time to time, third parties may assert against us or our customers alleged patent, copyright, trademark, or other intellectual property rights to technologies that are important to our business. We may be subject to intellectual property infringement claims from certain individuals and companies who have acquired patent portfolios for the sole purpose of asserting such claims against other companies. Any claims that our products or processes infringe the intellectual property rights of others, regardless of the merit or resolution of such claims, could cause us to incur significant costs in responding to, defending, and resolving such claims, and may divert the efforts and attention of our management and technical personnel away from our business. As a result of such intellectual property infringement claims, we could be required or otherwise decide it is appropriate to:

pay third-party infringement claims;

discontinue manufacturing, using, or selling particular products subject to infringement claims;

discontinue using the technology or processes subject to infringement claims;

develop other technology not subject to infringement claims, which could be time-consuming and costly or may not be possible; and/or

license technology from the third party claiming infringement, which license may not be available on commercially reasonable terms.

The occurrence of any of the foregoing could result in unexpected expenses or require us to recognize an impairment of our assets, which would reduce the value of our assets and increase expenses. In addition, if we alter or discontinue our production of affected items, our revenue could be negatively impacted.

We may be subject to litigation proceedings that could harm our business.

In addition to the litigation risks mentioned above, we may be subject to legal claims or regulatory matters involving stockholder, consumer, antitrust, and other issues. As described in Note 16: Contingencies in the Notes to Consolidated Condensed Financial Statements of this Form 10-Q, we are currently engaged in a number of litigation matters. Litigation is subject to inherent uncertainties, and unfavorable rulings could occur. An unfavorable ruling could include monetary damages or, in cases for which injunctive relief is sought, an injunction prohibiting us from manufacturing or selling one or more products. Were an unfavorable ruling to occur, our business and results of operations could be materially harmed.

We may not be able to enforce or protect our intellectual property rights, which may harm our ability to compete and harm our business.

Our ability to enforce our patents, copyrights, software licenses, and other intellectual property rights is subject to general litigation risks, as well as uncertainty as to the enforceability of our intellectual property rights in various countries. When we seek to enforce our rights, we are often subject to claims that the intellectual property right is invalid, is otherwise not enforceable, or is licensed to the party against whom we are asserting a claim. In addition, our assertion of intellectual property rights often results in the other party seeking to assert alleged intellectual property rights of its own against us, which may harm our business. If we are not ultimately successful in defending ourselves against these claims in litigation, we may not be able to sell a particular product or family of products due to an injunction, or we may have to pay damages that could, in turn, harm our results of operations. In addition, governments may adopt regulations or courts may render decisions requiring compulsory licensing of intellectual property to others, or governments may require that products meet specified standards that serve to favor local companies. Our inability to enforce our intellectual property rights under these circumstances may harm our competitive position and our business.

Our licenses with other companies and our participation in industry initiatives may allow other companies, including our competitors, to use our patent rights.

Companies in the semiconductor industry often rely on the ability to license patents from each other in order to compete. Many of our competitors have broad licenses or cross-licenses with us, and under current case law, some of these licenses may permit these competitors to pass our patent rights on to others. If one of these licensees becomes a foundry, our competitors might be able to avoid our patent rights in manufacturing competing products. In addition, our participation in industry initiatives may require us to license our patents to other companies that adopt certain industry standards or specifications, even when such organizations do not adopt standards or specifications proposed by us. As a result, our patents implicated by our participation in industry initiatives might not be available for us to enforce against others who might otherwise be deemed to be infringing those patents, our costs of enforcing our licenses or protecting our patents may increase, and the value of our intellectual property may be impaired.

Changes in our decisions with regard to our announced restructuring and efficiency efforts, and other factors, could affect our results of operations and financial condition.

Factors that could cause actual results to differ materially from our expectations with regard to our announced restructuring include:

- timing and execution of plans and programs that may be subject to local labor law requirements, including consultation with appropriate work councils;

- changes in assumptions related to severance and postretirement costs;

- future dispositions;

- new business initiatives and changes in product roadmap, development, and manufacturing;

- changes in employment levels and turnover rates;

- changes in product demand and the business environment; and

- changes in the fair value of certain long-lived assets.

In order to compete, we must attract, retain, and motivate key employees, and our failure to do so could harm our results of operations.

In order to compete, we must attract, retain, and motivate executives and other key employees, including those in managerial, technical, sales, marketing, and support positions. Hiring and retaining qualified executives, scientists, engineers, technical staff, and sales representatives are critical to our business, and competition for experienced employees in the semiconductor industry can be intense. To help attract, retain, and motivate qualified employees, we use share-based incentive awards such as employee stock options and non-vested share units (restricted stock units). If the value of such stock awards does not appreciate as measured by the performance of the price of our common stock or if our share-based compensation otherwise ceases to be viewed as a valuable benefit, our ability to attract, retain, and motivate employees could be weakened, which could harm our results of operations.

Our results of operations could vary as a result of the methods, estimates, and judgments that we use in applying our accounting policies.

The methods, estimates, and judgments that we use in applying our accounting policies have a significant impact on our results of operations (see *Critical Accounting Estimates* in Part I, Item 2 of this Form 10-Q). Such methods, estimates, and judgments are, by their nature, subject to substantial risks, uncertainties, and assumptions, and factors may arise over time that lead us to change our methods, estimates, and judgments. Changes in those methods, estimates, and judgments could significantly affect our results of operations.

Our failure to comply with applicable environmental laws and regulations worldwide could harm our business and results of operations.

The manufacturing and assembling and testing of our products require the use of hazardous materials that are subject

to a broad array of environmental, health, and safety laws and regulations. Our failure to comply with any of these applicable laws or regulations could result in:

regulatory penalties, fines, and legal liabilities;

suspension of production;

alteration of our fabrication and assembly and test processes; and

curtailment of our operations or sales.

In addition, our failure to manage the use, transportation, emission, discharge, storage, recycling, or disposal of hazardous materials could subject us to increased costs or future liabilities. Existing and future environmental laws and regulations could also require us to acquire pollution abatement or remediation equipment, modify our product designs, or incur other expenses associated with such laws and regulations. Many new materials that we are evaluating for use in our operations may be subject to regulation under existing or future environmental laws and regulations that may restrict our use of one or more of such materials in our manufacturing, assembly and test processes, or products. Any of these restrictions could harm our business and results of operations by increasing our expenses or requiring us to alter our manufacturing and assembly and test processes.

Changes in our effective tax rate may harm our results of operations.

A number of factors may increase our future effective tax rates, including:

the jurisdictions in which profits are determined to be earned and taxed;

the resolution of issues arising from tax audits with various tax authorities;

changes in the valuation of our deferred tax assets and liabilities;

adjustments to estimated taxes upon finalization of various tax returns;

increases in expenses not deductible for tax purposes, including write-offs of acquired in-process R&D and impairments of goodwill in connection with acquisitions;

changes in available tax credits;

changes in tax laws or the interpretation of such tax laws, and changes in generally accepted accounting principles; and

our decision to repatriate non-U.S. earnings for which we have not previously provided for U.S. taxes.

Any significant increase in our future effective tax rates could reduce net income for future periods.

We invest in companies for strategic reasons and may not realize a return on our investments.

We make investments in companies around the world to further our strategic objectives and support our key business initiatives. Such investments include investments in equity securities of public companies and non-marketable equity investments in private companies, which range from early-stage companies that are often still defining their strategic direction to more mature companies with established revenue streams and business models. The success of these companies is dependent on product development, market acceptance, operational efficiency, and other key business factors. The private companies in which we invest may fail because they may not be able to secure additional funding, obtain favorable investment terms for future financings, or take advantage of liquidity events such as initial public offerings, mergers, and private sales. If any of these private companies fail, we could lose all or part of our investment in that company. If we determine that an other-than-temporary decline in the fair value exists for an equity investment in a public or private company in which we have invested, we write down the investment to its fair value and recognize the related write-down as an investment loss. Furthermore, when the strategic objectives of an investment have been achieved, or if the investment or business diverges from our strategic objectives, we may decide to dispose of the investment. Our non-marketable equity investments in private companies are not liquid, and we may not be able to dispose of these investments on favorable terms or at all. The occurrence of any of these events could harm our results of operations. Additionally, for cases in which we are required under equity method accounting to recognize a proportionate share of another company's income or loss, such income and loss may impact our earnings.

Interest and other, net could vary from expectations, which could harm our results of operations.

Factors that could cause interest and other, net in our consolidated condensed statements of income to fluctuate include:

fixed-income and credit market volatility;

fluctuations in interest rates;

changes in our cash and investment balances;

fluctuations in foreign currency exchange rates;

other-than-temporary impairments in the fair value of fixed-income instruments;

changes in our hedge accounting treatment; and

gains or losses from divestitures.

Our acquisitions, divestitures, and other transactions could disrupt our ongoing business and harm our results of operations.

In pursuing our business strategy, we routinely conduct discussions, evaluate opportunities, and enter into agreements regarding possible investments, acquisitions, divestitures, and other transactions, such as joint ventures. Acquisitions and other transactions involve significant challenges and risks, including risks that:

we may not be able to identify suitable opportunities at terms acceptable to us;

the transaction may not advance our business strategy;

we may not realize a satisfactory return on the investment we make;

we may not be able to retain key personnel of the acquired business; or

we may experience difficulty in integrating new employees, business systems, and technology.

When we decide to sell assets or a business, we may encounter difficulty in finding or completing divestiture opportunities or alternative exit strategies on acceptable terms in a timely manner, and the agreed terms and financing arrangements could be renegotiated due to changes in business or market conditions. These circumstances could delay the accomplishment of our strategic objectives or cause us to incur additional expenses with respect to businesses that we want to dispose of, or we may dispose of a business at a price or on terms that are less favorable than we had anticipated, resulting in a loss on the transaction.

If we do enter into agreements with respect to acquisitions, divestitures, or other transactions, we may fail to complete them due to:

failure to obtain required regulatory or other approvals;

intellectual property or other litigation;

difficulties that we or other parties may encounter in obtaining financing for the transaction; or other factors.

Further, acquisition, divestiture, and other transactions require substantial management resources and have the potential to divert our attention from our existing business. These factors could harm our business and results of operations.

ITEM 2. UNREGISTERED SALES OF EQUITY SECURITIES AND USE OF PROCEEDS**Issuer Purchases of Equity Securities**

We have an ongoing authorization, amended in November 2005, from our Board of Directors to repurchase up to \$25 billion in shares of our common stock in open market or negotiated transactions. As of March 29, 2008, \$12 billion remained available for repurchase under the existing repurchase authorization. A portion of our purchases in the first quarter of 2008 were executed under a privately negotiated forward purchase agreement.

Common stock repurchase activity under our authorized plan during the first quarter of 2008 was as follows (in millions, except per share amounts):

Period	Total Number of Shares Purchased	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans	Dollar Value of Shares that May Yet Be Purchased Under the Plans
December 30, 2007-January 26, 2008	8.6	\$ 19.25	8.6	\$ 14,354
January 27, 2008-February 23, 2008	49.9	\$ 20.53	49.9	\$ 13,330
February 24, 2008-March 29, 2008	63.4	\$ 20.66	63.4	\$ 12,020
Total	121.9	\$ 20.51	121.9	

For the majority of restricted stock units granted, the number of shares issued on the date the restricted stock units vest is net of the statutory withholding requirements that we pay on behalf of our employees. These withheld shares are not included within the common stock repurchase totals in the tables above.

ITEM 6. EXHIBITS

- 3.1 Intel Corporation Third Restated Certificate of Incorporation (incorporated by reference to Exhibit 3.1 to the Registrant's Current Report on Form 8-K as filed on May 22, 2006)
- 3.2 Intel Corporation Bylaws, as amended on January 17, 2007 (incorporated by reference to Exhibit 3.1 to the Registrant's Current Report on Form 8-K as filed on January 18, 2007)
- 10.1 Amended and Restated Master Agreement By and Between STMicroelectronics N.V., Intel Corporation, Redwood Blocker S.A.R.L., Francisco Partners II (Cayman) L.P., PK Flash, LLC, and Francisco Partners Parallel Fund II L.P., dated March 30, 2008
- 10.2 Asset Transfer Agreement By and Between Numonyx Holdings B.V., Numonyx B.V., and Intel Corporation, dated as of March 30, 2008
- 10.3** Form of Stock Option Agreement with Continued Post-Employment Exercisability
- 10.4** Intel Corporation 2006 Equity Incentive Plan Terms and Conditions Relating to Restricted Stock Units Granted to Paul S. Otellini On April 17, 2008 under the Intel Corporation 2006 Equity Incentive Plan (under the ELTSOP RSU program) (incorporated by reference to Exhibit 99.1 to the Registrant's Current Report on Form 8-K as filed on April 17, 2008)
- 10.5** Amendment of Stock Option and Restricted Stock Unit Agreements with the Elimination of Leave of Absence Provisions
- 10.6** Amendment of Stock Option and Restricted Stock Unit Agreements with the Elimination of Leave of Absence Provisions and the Addition of the Ability to Change the Grant Agreement as Laws Change
- 12.1 Statement Setting Forth the Computation of Ratios of Earnings to Fixed Charges
- 31.1 Certification of Chief Executive Officer Pursuant to Rule 13a-14(a) of the Exchange Act
- 31.2 Certification of Chief Financial Officer and Principal Accounting Officer Pursuant to Rule 13a-14(a) of the Exchange Act
- 32.1 Certification of Chief Executive Officer and Chief Financial Officer and Principal Accounting Officer Pursuant to Rule 13a-14(b) of the Exchange Act and 18 U.S.C. Section 1350, as Adopted Pursuant to Section 906 of the Sarbanes-Oxley Act of 2002

** *Management contracts or compensation plans or arrangements in which executive officers are eligible to participate.*

Intel, the Intel logo, Intel Inside, Intel Atom, Celeron, Intel Centrino, Intel Core, Intel Core Duo, Intel Core 2 Duo, Intel Core 2 Quad, Intel Viiv, Intel vPro, Intel Xeon, Intel XScale, Itanium, and Pentium are trademarks of Intel Corporation in the U.S. or other countries.
