Cleveland-Cliffs Inc published a News Release on February 27, 2004 as follows:

CLIFFS COMMENTS ON PELLETS PRICE

CLEVELAND, OH February 27, 2004 Cleveland-Cliffs Inc (NYSE:CLF) today commented on the recent iron ore price settlement by the Eastern Canadian producers. Per published reports, the 2004 price for Eastern Canadian blast furnace pellets has increased 21.2 percent, slightly above the 19.0 percent and the 20.1 percent increases previously announced by Companhia Vale do Rio Doce (CVRD). As stated in Cliffs February 10 release, the effect of this adjustment factor on Cliffs price per ton for 2004 will be an average increase of approximately five percent from 2003.

In addition to the five percent increase generated by the change in the pellet prices, Cliffs 2004 iron ore price will also be affected by certain steel customers average hot rolled coil price realization for 2004. The actual average hot rolled coil realizations include both term agreement and spot sales. Based on projected pellet sales of 22 million tons, Cliffs estimates that its 2004 revenues would increase by approximately \$.22 per ton of pellets sold, or roughly \$5 million, for every \$10 per ton increment that the customers actual average annual realization for basic hot rolled coil exceeds \$300.

Cleveland-Cliffs Inc, headquartered in Cleveland, Ohio, is the largest producer of iron ore pellets in North America and sells the majority of its pellets to integrated steel companies in the United States and Canada. The Company operates six iron ore mines located in Michigan, Minnesota and Eastern Canada.

* * * * *

The statements above regarding the impact of an increase in the world price of blast furnace pellets and steel prices are forward-looking statements. Actual results may differ materially from those reflected in these forward-looking statements for a number of reasons, including: price adjustment provisions in our term supply agreements that may limit our ability to match international ore contract prices; the expectations for pellet sales and mine operations may differ significantly from actual results because of changes in demand for iron ore pellets by North American integrated steel producers due to changes in steel utilization rates, operational factors, electric furnace production or imports of semi-finished or pig iron; changes in the financial condition of the Company's partners and/or customers; rejection of major contracts and/or venture agreements by customers and/or participants under provisions of the U.S. Bankruptcy Code or similar statutes in other countries; events or circumstances
