CAUTIONARY STATEMENT REGARDING FORWARD-LOOKING INFORMATION

This Quarterly Report on Form 10-Q contains forward-looking statements. Forward-looking statements include, among other things, statements concerning retail sales, retail rates, economic recovery, fuel and environmental cost recovery and other rate actions, current and proposed environmental regulations and related estimated expenditures, future earnings, access to sources of capital, projections for the qualified pension plan and other postretirement benefit plan contributions, financing activities, start and completion of construction projects, plans and estimated costs for new generation resources, filings with state and federal regulatory authorities, impact of the Tax Relief, Unemployment Insurance Reauthorization, and Job Creation Act of 2010, estimated sales and purchases under new power sale and purchase agreements, and estimated construction and other expenditures. In some cases, forward-looking statements can be identified by terminology such as may, will, could, should, expects, plans, anticipates, believes, estimates, projects, predicts, potential, or continue or the negative of these terms terminology. There are various factors that could cause actual results to differ materially from those suggested by the forward-looking statements; accordingly, there can be no assurance that such indicated results will be realized. These factors include:

the impact of recent and future federal and state regulatory changes, including legislative and regulatory initiatives regarding deregulation and restructuring of the electric utility industry, implementation of the Energy Policy Act of 2005, environmental laws including regulation of water, coal combustion byproducts, and emissions of sulfur, nitrogen, carbon, soot, particulate matter, hazardous air pollutants, including mercury, and other substances, financial reform legislation, and also changes in tax and other laws and regulations to which Southern Company and its subsidiaries are subject, as well as changes in application of existing laws and regulations;

current and future litigation, regulatory investigations, proceedings, or inquiries, including the pending EPA civil actions against certain Southern Company subsidiaries, FERC matters, and IRS and state tax audits;

the effects, extent, and timing of the entry of additional competition in the markets in which Southern Company's subsidiaries operate;

variations in demand for electricity, including those relating to weather, the general economy and recovery from the recent recession, population and business growth (and declines), and the effects of energy conservation measures;

available sources and costs of fuels;

effects of inflation;

ability to control costs and avoid cost overruns during the development and construction of facilities;

investment performance of Southern Company's employee benefit plans and nuclear decommissioning trust funds;

advances in technology;

state and federal rate regulations and the impact of pending and future rate cases and negotiations, including rate actions relating to fuel and other cost recovery mechanisms;

Edgar Filing: ALABAMA POWER CO - Form 10-Q

regulatory approvals and actions related to Plant Vogtle Units 3 and 4, including Georgia PSC approvals, NRC actions, and potential DOE loan guarantees;

regulatory approvals and actions related to the Kemper IGCC, including Mississippi PSC approvals, potential DOE loan guarantees, the SMEPA purchase decision, utilization of investment tax credits, and the outcome of any further proceedings regarding the Mississippi PSC's issuance of the CPCN;

the performance of projects undertaken by the non-utility businesses and the success of efforts to invest in and develop new opportunities;

internal restructuring or other restructuring options that may be pursued;

potential business strategies, including acquisitions or dispositions of assets or businesses, which cannot be assured to be completed or beneficial to Southern Company or its subsidiaries;

the ability of counterparties of Southern Company and its subsidiaries to make payments as and when due and to perform as required;

the ability to obtain new short- and long-term contracts with wholesale customers;

the direct or indirect effect on Southern Company's business resulting from terrorist incidents and the threat of terrorist incidents, including cyber intrusion;

Table of Contents

interest rate fluctuations and financial market conditions and the results of financing efforts, including Southern Company's and its subsidiaries' credit ratings;

the impacts of any potential U.S. credit rating downgrade or other sovereign financial issues, including impacts on interest rates, access to capital markets, impacts on currency exchange rates, counterparty performance, and the economy in general, as well as potential impacts on the availability or benefits of proposed DOE loan guarantees;

the ability of Southern Company and its subsidiaries to obtain additional generating capacity at competitive prices;

catastrophic events such as fires, earthquakes, explosions, floods, hurricanes, droughts, pandemic health events such as influenzas, or other similar occurrences;

the direct or indirect effects on Southern Company's business resulting from incidents affecting the U.S. electric grid or operation of generating resources;

the effect of accounting pronouncements issued periodically by standard setting bodies; and

other factors discussed elsewhere herein and in other reports filed by the registrants from time to time with the SEC.

The registrants expressly disclaim any obligation to update any forward-looking statements.

THE SOUTHERN COMPANY AND SUBSIDIARY COMPANIES

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

FIRST QUARTER 2012 vs. FIRST QUARTER 2011

OVERVIEW

Southern Company is a holding company that owns all of the common stock of the traditional operating companies—Alabama Power, Georgia Power, Gulf Power, and Mississippi Power—and Southern Power and other direct and indirect subsidiaries. Discussion of the results of operations is focused on the Southern Company system's primary business of electricity sales by the traditional operating companies and Southern Power. The four traditional operating companies are vertically integrated utilities providing electric service in four Southeastern states. Southern Power constructs, acquires, owns, and manages generation assets, including renewable energy projects, and sells electricity at market-based rates in the wholesale market. Southern Company's other business activities include investments in leveraged lease projects and telecommunications. For additional information on these businesses, see **BUSINESS—The Southern Company System—Traditional Operating Companies, Southern Power, and Other Businesses** in Item 1 of the Form 10-K.

Southern Company continues to focus on several key performance indicators. These indicators include customer satisfaction, plant availability, system reliability, and earnings per share. For additional information on these indicators, see **MANAGEMENT'S DISCUSSION AND ANALYSIS—OVERVIEW—Key Performance Indicators** of Southern Company in Item 7 of the Form 10-K.

RESULTS OF OPERATIONS

Net Income

First Quarter 2012 vs. First Quarter 2011

(change in millions)
\$(54)

(% change)
(12.8)

Southern Company's first quarter 2012 net income after dividends on preferred and preference stock of subsidiaries was \$368 million (\$0.42 per share) compared to \$422 million (\$0.50 per share) for the first quarter 2011. The decrease for the first quarter 2012 when compared to the corresponding period in 2011 was primarily the result of a decrease in revenues due to milder weather, an increase in depreciation on additional plant in service related to new generation, transmission, distribution, and environmental projects, an increase in operations and maintenance expenses, and lower energy revenues at Southern Power. The net income decrease for the first quarter 2012 was partially offset by increases in revenues associated with the elimination of a tax-related adjustment under Alabama Power's rate structure, an increase related to retail revenue rate effects at Georgia Power, an increase related to interim retail rate revenues at Gulf Power, and an increase in industrial KWH sales.

Retail Revenues

First Quarter 2012 vs. First Quarter 2011

(change in millions)

(% change)

Edgar Filing: ALABAMA POWER CO - Form 10-Q

\$(304)

(9.0)

In the first quarter 2012, retail revenues were \$3.1 billion compared to \$3.4 billion for the corresponding period in 2011.

Table of Contents**THE SOUTHERN COMPANY AND SUBSIDIARY COMPANIES****MANAGEMENT'S DISCUSSION AND ANALYSIS OF****FINANCIAL CONDITION AND RESULTS OF OPERATIONS**

Details of the change to retail revenues were as follows:

	First Quarter	
	2012	
	<i>(in millions)</i>	<i>(% change)</i>
Retail – prior year	\$3,396	
Estimated change in		
Rates and pricing	59	1.7
Sales growth (decline)	17	0.5
Weather	(113)	(3.3)
Fuel and other cost recovery	(267)	(7.9)
Retail – current year	\$3,092	(9.0)%

Revenues associated with changes in rates and pricing increased in the first quarter 2012 when compared to the corresponding period in 2011 primarily due to the elimination of a tax-related adjustment under Alabama Power's rate structure and an increase related to interim retail rate revenues at Gulf Power. Also contributing to the increase were increases in retail revenues at Georgia Power associated with rate pricing effects due to decreased customer usage and the NCCR and demand-side management tariff increases, partially offset by lower contributions from market-driven rates from commercial and industrial customers.

Revenues attributable to changes in sales increased in the first quarter 2012 when compared to the corresponding period in 2011. The increase was due to a 1.9% increase in industrial KWH sales and a 0.6% increase in weather-adjusted residential KWH sales, partially offset by a 1.3% decrease in weather-adjusted commercial KWH sales. Increased demand in the pipelines, transportation, and primary metals sectors was the main contributor to the increase in industrial KWH sales.

Revenues resulting from changes in weather decreased \$113 million in the first quarter 2012 as a result of milder weather when compared to the corresponding period in 2011.

Fuel and other cost recovery revenues decreased \$267 million in the first quarter 2012 when compared to the corresponding period in 2011. Electric rates for the traditional operating companies include provisions to adjust billings for fluctuations in fuel costs, including the energy component of purchased power costs. Under these provisions, fuel revenues generally equal fuel expenses, including the fuel component of purchased power costs, and do not affect net income.

Wholesale Revenues

First Quarter 2012 vs. First Quarter 2011

(change in millions)

(% change)

Edgar Filing: ALABAMA POWER CO - Form 10-Q

\$(100)

(22.3)

Wholesale revenues consist of PPAs with investor-owned utilities and electric cooperatives, unit power sales contracts, and short-term opportunity sales. Wholesale revenues from PPAs and unit power sales contracts have both capacity and energy components. Capacity revenues reflect the recovery of fixed costs and a return on investment. Energy revenues will vary depending on fuel prices, the market prices of wholesale energy compared to the Southern Company system's generation, demand for energy within the Southern Company system's service territory, and the availability of the Southern Company system's generation. Increases and decreases in energy revenues that are driven by fuel prices are accompanied by an increase or decrease in fuel costs and do not have a significant impact on net income. Short-term opportunity sales are made at market-based rates that generally provide a margin above the Southern Company system's variable cost to produce the energy.

Table of Contents**THE SOUTHERN COMPANY AND SUBSIDIARY COMPANIES****MANAGEMENT'S DISCUSSION AND ANALYSIS OF****FINANCIAL CONDITION AND RESULTS OF OPERATIONS**

In the first quarter 2012, wholesale revenues were \$349 million compared to \$449 million for the corresponding period in 2011, reflecting a \$107 million decrease in energy revenues and a \$7 million increase in capacity revenues. The decrease in the first quarter 2012 was primarily related to lower energy sales mainly due to lower customer demand and a reduction in the average price of energy.

Fuel and Purchased Power Expenses

First Quarter 2012 vs. First Quarter 2011

	<i>(change in millions)</i>	<i>(% change)</i>
Fuel	\$ (412)	(27.9)
Purchased power	41	41.0
Total fuel and purchased power expenses	\$ (371)	

In the first quarter 2012, total fuel and purchased power expenses were \$1.2 billion compared to \$1.6 billion for the corresponding period in 2011. The decrease in the first quarter 2012 when compared to the corresponding period in 2011 was primarily the result of a \$395 million decrease in the average cost of fuel and purchased power, partially offset by a \$24 million net increase related to total KWHs generated and purchased.

Fuel expenses at the traditional operating companies are generally offset by fuel revenues and do not have a significant effect on net income. See FUTURE EARNINGS POTENTIAL – PSC Matters – Retail Fuel Cost Recovery herein for additional information. Fuel expenses incurred under Southern Power's PPAs are generally the responsibility of the counterparties and do not significantly affect net income.

Details of the Southern Company system's generation and purchased power were as follows:

	First Quarter 2012	First Quarter 2011
Total generation (<i>billions of KWHs</i>)	39	46
Total purchased power (<i>billions of KWHs</i>)	4	1
Sources of generation (<i>percent</i>)		
Coal	35	53
Nuclear	19	16
Gas	42	28
Hydro	4	3

Cost of fuel, generated (*cents per net KWH*)

Edgar Filing: ALABAMA POWER CO - Form 10-Q

Coal	4.09	3.96
Nuclear	0.80	0.67
Gas	2.77	3.93
Average cost of fuel, generated (<i>cents per net KWH</i>)	2.85	3.39
Average cost of purchased power (<i>cents per net KWH</i>)*	3.88	9.25

* Average cost of purchased power includes fuel purchased by the electric utilities for tolling agreements where power is generated by the provider.

In the first quarter 2012, fuel expense was \$1.1 billion compared to \$1.5 billion for the corresponding period in 2011. The decrease in the first quarter 2012 when compared to the corresponding period in 2011 was primarily due to a 29.5% decrease in the average cost of gas per KWH generated, a higher percentage of generation from lower cost natural gas-fired resources, and lower customer demand mainly due to milder weather.

In the first quarter 2012, purchased power expense was \$141 million compared to \$100 million for the corresponding period in 2011. The increase in the first quarter 2012 when compared to the corresponding period in 2011 was primarily due to a 298.2% increase in the volume of KWHs purchased as the market cost of available energy was lower than the marginal cost of generation available, partially offset by a 58.1% decrease in the average cost per KWH purchased.

Table of Contents

THE SOUTHERN COMPANY AND SUBSIDIARY COMPANIES

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Energy purchases will vary depending on demand for energy within the Southern Company system's service territory, the market prices of wholesale energy as compared to the cost of the Southern Company system's generation, and the availability of the Southern Company system's generation.

Other Operations and Maintenance Expenses

First Quarter 2012 vs. First Quarter 2011

(change in millions)
\$23

(% change)
2.4

In the first quarter 2012, other operations and maintenance expenses were \$967 million compared to \$944 million for the corresponding period in 2011. The increase in the first quarter 2012 when compared to the corresponding period in 2011 was primarily the result of a \$43 million increase in administrative and general costs primarily due to increases in pension costs, property insurance, and other employee benefits. Also contributing to the increase was a \$6 million increase in customer service and sales related costs. The increase in the first quarter 2012 was partially offset by a \$13 million decrease primarily related to scheduled outage and maintenance costs and commodity and labor costs, as well as an \$11 million decrease at Mississippi Power related to the expiration of an operating lease for Plant Daniel Units 3 and 4. See MANAGEMENT'S DISCUSSION AND ANALYSIS - FINANCIAL CONDITION AND LIQUIDITY - Purchase of the Plant Daniel Combined Cycle Generating Units of Southern Company in Item 7 of the Form 10-K for additional information.

Depreciation and Amortization

First Quarter 2012 vs. First Quarter 2011

(change in millions)
\$23

(% change)
5.5

In the first quarter 2012, depreciation and amortization was \$441 million compared to \$418 million for the corresponding period in 2011. The increase for the first quarter 2012 when compared to the corresponding period in 2011 was primarily the result of an increase in depreciation due to additional plant in service related to new generation at Georgia Power's Plant McDonough Unit 4 that went into service in December 2011, as well as transmission, distribution, and environmental projects.

Allowance for Equity Funds Used During Construction

Edgar Filing: ALABAMA POWER CO - Form 10-Q

First Quarter 2012 vs. First Quarter 2011

(change in millions)

\$(4)

(% change)

(11.4)

In the first quarter 2012, AFUDC equity was \$31 million compared to \$35 million for the corresponding period in 2011. The decrease for the first quarter 2012 when compared to the corresponding period in 2011 was primarily due to the completion of Georgia Power's Plant McDonough Unit 4 in December 2011, partially offset by CWIP related to Mississippi Power's Kemper IGCC.

Interest Expense, Net of Amounts Capitalized

First Quarter 2012 vs. First Quarter 2011

(change in millions)

\$(11)

(% change)

(5.0)

In the first quarter 2012, interest expense, net of amounts capitalized was \$211 million compared to \$222 million for the corresponding period in 2011. The decrease for the first quarter 2012 when compared to the corresponding period in 2011 was primarily due to lower interest rates on outstanding debt and a refinancing of long-term debt during 2011 at

Table of Contents

THE SOUTHERN COMPANY AND SUBSIDIARY COMPANIES

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Southern Power. Also contributing to the decrease was an increase in capitalized interest associated with construction projects at Southern Power.

Income Taxes

First Quarter 2012 vs. First Quarter 2011

(change in millions)
\$(31)

(% change)
(13.4)

In the first quarter 2012, income taxes were \$200 million compared to \$231 million for the corresponding period in 2011. The decrease for the first quarter 2012 when compared to the corresponding period in 2011 was primarily the result of lower pre-tax earnings.

FUTURE EARNINGS POTENTIAL

The results of operations discussed above are not necessarily indicative of Southern Company's future earnings potential. The level of Southern Company's future earnings depends on numerous factors that affect the opportunities, challenges, and risks of Southern Company's primary business of selling electricity. These factors include the traditional operating companies' ability to maintain a constructive regulatory environment that continues to allow for the timely recovery of prudently incurred costs during a time of increasing costs. Another major factor is the profitability of the competitive wholesale supply business. Future earnings for the electricity business in the near term will depend, in part, upon maintaining energy sales which is subject to a number of factors. These factors include weather, competition, new energy contracts with neighboring utilities and other wholesale customers, energy conservation practiced by customers, the price of electricity, the price elasticity of demand, and the rate of economic growth or decline in the service territory. In addition, the level of future earnings for the wholesale supply business also depends on numerous factors including creditworthiness of customers, total generating capacity available and related costs, future acquisitions and construction of generating facilities, and the successful remarketing of capacity as current contracts expire. Changes in economic conditions impact sales for the traditional operating companies and Southern Power, and the pace of the economic recovery remains uncertain. The timing and extent of the economic recovery will impact growth and may impact future earnings. For additional information relating to these issues, see RISK FACTORS in Item 1A and MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL of Southern Company in Item 7 of the Form 10-K.

Environmental Matters

Compliance costs related to federal and state environmental statutes and regulations could affect earnings if such costs cannot continue to be fully recovered in rates on a timely basis. Environmental compliance spending over the next several years may differ materially from the amounts estimated. The timing, specific requirements, and estimated costs could change as environmental statutes and regulations are adopted or modified. Further, higher costs that are recovered through regulated rates could contribute to reduced demand for electricity, which could negatively affect results of operations, cash flows, and financial condition. See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - Environmental Matters of Southern Company in Item 7 and Note 3 to the financial statements of Southern Company under Environmental Matters in Item 8 of the Form 10-K for additional information.

New Source Review Actions

Edgar Filing: ALABAMA POWER CO - Form 10-Q

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - Environmental Matters - New Source Review Actions of Southern Company in Item 7 and Note 3 to the financial statements of Southern Company under Environmental Matters - New Source Review Actions in Item 8 of the Form 10-K for additional information. On February 23, 2012, the EPA filed a motion in the U.S. District Court for the Northern District of Alabama seeking vacatur of the judgment and recusal of the judge in the case involving Alabama Power (including claims related to a unit co-owned by Mississippi Power). At the same time, the EPA asked the U.S. Court of Appeals for

Table of Contents

THE SOUTHERN COMPANY AND SUBSIDIARY COMPANIES

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

the Eleventh Circuit to stay its appeal of the judgment in favor of Alabama Power. Alabama Power filed oppositions to the EPA's motion and its request for a stay. On March 29, 2012, the U.S. Court of Appeals for the Eleventh Circuit denied the EPA's request to stay its appeal. The U.S. District Court for the Northern District of Alabama has not ruled on the EPA's motion seeking vacatur of the judgment. The ultimate outcome of this matter cannot be determined at this time.

Climate Change Litigation

Hurricane Katrina Case

See MANAGEMENT'S DISCUSSION AND ANALYSIS—FUTURE EARNINGS POTENTIAL—Environmental Matters—Climate Change Litigation—Hurricane Katrina Case of Southern Company in Item 7 and Note 3 to the financial statements of Southern Company under Environmental Matters—Climate Change Litigation—Hurricane Katrina Case in Item 8 of the Form 10-K for additional information. On March 20, 2012, the U.S. District Court for the Southern District of Mississippi dismissed the amended class action complaint filed on May 27, 2011 by the plaintiffs. On April 16, 2012, the plaintiffs appealed the case to the U.S. Court of Appeals for the Fifth Circuit. The ultimate outcome of this matter cannot be determined at this time.

Environmental Statutes and Regulations

General

See MANAGEMENT'S DISCUSSION AND ANALYSIS—FUTURE EARNINGS POTENTIAL—Environmental Matters—Environmental Statutes and Regulations—General of Southern Company in Item 7 of the Form 10-K for information regarding the Southern Company system's estimated base level capital expenditures to comply with existing statutes and regulations for 2012 through 2014, as well as the Southern Company system's preliminary estimates for potential incremental environmental compliance investments associated with complying with the EPA's final Mercury and Air Toxics Standards (MATS) rule (formerly referred to as the Utility Maximum Achievable Control Technology rule) and the EPA's proposed water and coal combustion byproducts rules. The Southern Company system is continuing to develop its compliance strategy and to assess the potential costs of complying with the MATS rule and the EPA's proposed water and coal combustion byproducts rules.

The Southern Company system's compliance strategy, including potential unit retirement and replacement decisions, and future environmental capital expenditures are dependent on a final assessment of the MATS rule and will be affected by the final requirements of new or revised environmental regulations that are promulgated, including any proposed environmental regulations; the outcome of any legal challenges to the environmental rules; the cost, availability, and existing inventory of emissions allowances; and the fuel mix of the electric utilities. These costs may arise from existing unit retirements, installation of additional environmental controls, upgrades to the transmission system, the addition of new generating resources, and changing fuel sources for certain existing units. The Southern Company system's preliminary analysis further indicates that the short timeframe for compliance with the MATS rule could significantly affect electric system reliability and cause an increase in costs of materials and services. The ultimate outcome of these matters cannot be determined at this time.

As part of Southern Electric Generating Company's (SEGCO) environmental compliance strategy, the Board of Directors of SEGCO approved adding natural gas as the primary fuel source in 2015 for its 1,000 MWs of generating capacity and the construction of the necessary natural gas pipeline. SEGCO is jointly owned by Alabama Power and Georgia Power. The capacity of SEGCO's units is sold to Alabama Power and Georgia Power through a PPA. The impact of SEGCO's ultimate compliance strategy on such PPA costs cannot be determined at this time; however, if such costs cannot continue to be recovered through retail rates, they could have a material impact on Southern Company's financial statements.

Table of Contents

THE SOUTHERN COMPANY AND SUBSIDIARY COMPANIES

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Air Quality

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL Environmental Matters Environmental Statutes and Regulations Air Quality of Southern Company in Item 7 of the Form 10-K for additional information on the eight-hour ozone air quality standards and the MATS rule.

On May 1, 2012, the EPA released its final determination of nonattainment areas based on the 2008 eight-hour ozone air quality standards. The only area within the traditional operating companies' service territory designated as a nonattainment area was a 15-county area within metropolitan Atlanta.

Numerous petitions for administrative reconsideration of the MATS rule, including a petition by Southern Company and its subsidiaries, have been filed with the EPA. Challenges to the final rule have also been filed in the U.S. District Court of Appeals for the District of Columbia by numerous states, environmental organizations, industry groups, and others. The impact of the MATS rule will depend on the outcome of these and any other legal challenges and, therefore, cannot be determined at this time.

Coal Combustion Byproducts

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL Environmental Matters Environmental Statutes and Regulations Coal Combustion Byproducts of Southern Company in Item 7 of the Form 10-K for additional information. On April 5, 2012, 10 environmental groups filed a lawsuit in the U.S. District Court for the District of Columbia seeking to require the EPA to complete its rulemaking process and issue final regulations pertaining to the regulation of coal combustion byproducts as soon as possible. Other parties are expected to file similar challenges. The ultimate outcome of this matter cannot be determined at this time.

Global Climate Issues

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL Environmental Matters Global Climate Issues of Southern Company in Item 7 of the Form 10-K for additional information. On April 13, 2012, the EPA published proposed regulations to establish standards of performance for greenhouse gas emissions from new fossil fuel steam electric generating units. As proposed, the standards would not apply to existing units. The EPA has delayed its plans to propose greenhouse gas emissions performance standards for modified sources and emissions guidelines for existing sources. The impact of this rulemaking will depend on the scope and specific requirements of the final rule and the outcome of any legal challenges and, therefore, cannot be determined at this time.

PSC Matters

Retail Fuel Cost Recovery

The traditional operating companies each have established fuel cost recovery rates approved by their respective state PSCs. The traditional operating companies have experienced lower pricing for natural gas resulting in an increase in natural gas generation and a decrease in coal generation, which is currently more costly. The lower cost of natural gas has resulted in total over recovered fuel costs at Georgia Power, Gulf Power, and Mississippi Power included in Southern Company's Condensed Balance Sheets herein of approximately \$102 million at March 31, 2012. At March 31, 2012, Alabama Power had under recovered fuel costs included in Southern Company's Condensed Balance Sheet herein of approximately \$6 million. At December 31, 2011, total under recovered fuel costs at Alabama Power and Georgia Power included in Southern Company's Condensed Balance Sheet herein were approximately \$169 million, and Gulf Power and Mississippi Power had a total over recovered fuel balance included in Southern Company's Condensed Balance Sheet herein of approximately \$52 million. Fuel cost recovery revenues are adjusted for differences in actual recoverable fuel costs and amounts billed in current regulated rates. Accordingly, changes in the billing factor will not have a significant effect on Southern Company's revenues or net income, but will affect annual cash flow. The traditional operating companies continuously monitor their under or over recovered fuel cost balances.

Edgar Filing: ALABAMA POWER CO - Form 10-Q

On March 30, 2012, Georgia Power filed a request with the Georgia PSC to decrease fuel rates by 19%, which is expected to reduce annual billings by \$567 million. The decrease in fuel costs is driven primarily by lower natural gas prices as a result of increased natural gas supplies. The Georgia PSC is scheduled to vote on this matter on June 21, 2012. As proposed, the rate decrease would become effective July 1, 2012; however, Georgia Power is currently working

Table of Contents

THE SOUTHERN COMPANY AND SUBSIDIARY COMPANIES

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

with the Georgia PSC to potentially implement the proposed decrease effective June 1, 2012. The ultimate outcome of this matter cannot be determined at this time.

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL PSC Matters Fuel Cost Recovery of Southern Company in Item 7 and Note 3 to the financial statements of Southern Company under Retail Regulatory Matters Alabama Power Fuel Cost Recovery and Retail Regulatory Matters Georgia Power Fuel Cost Recovery in Item 8 of the Form 10-K for additional information.

Georgia Power

2011 Integrated Resource Plan Update

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL Environmental Matters Environmental Statutes and Regulations Air Quality, Water Quality, and Coal Combustion Byproducts of Southern Company in Item 7 and Note 3 to the financial statements of Southern Company under Retail Regulatory Matters Georgia Power Rate Plans and 2011 Integrated Resource Plan Update in Item 8 of the Form 10-K for additional information regarding proposed and final EPA rules and regulations, including the MATS rule for coal- and oil-fired electric utility steam generating units, revisions to effluent guidelines for steam electric power plants, and additional regulation of coal combustion byproducts; the State of Georgia's Multi-Pollutant Rule; Georgia Power's analysis of the potential costs and benefits of installing the required controls on its fossil generating units in light of these regulations; the 2010 ARP; and the 2011 IRP Update.

On March 20, 2012, the Georgia PSC approved Georgia Power's request to decertify and retire two coal-fired generation units at Plant Branch as of October 31, 2013 and December 31, 2013 and an oil-fired unit at Plant Mitchell as of March 26, 2012, which was included in Georgia Power's 2011 IRP Update. The Georgia PSC also approved three PPAs totaling 998 MWs with Southern Power for capacity and energy that will commence in 2015 and end in 2030. The PPAs remain subject to FERC approval. The ultimate outcome of this matter cannot be determined at this time.

Income Tax Matters

Bonus Depreciation

In December 2010, the Tax Relief, Unemployment Insurance Reauthorization, and Job Creation Act of 2010 (Tax Relief Act) was signed into law. Major tax incentives in the Tax Relief Act include 100% bonus depreciation for property placed in service after September 8, 2010 and through 2011 (and for certain long-term construction projects to be placed in service in 2012) and 50% bonus depreciation for property placed in service in 2012 (and for certain long-term construction projects to be placed in service in 2013), which will have a positive impact on the future cash flows of Southern Company through 2013. Due to the significant amount of estimated bonus depreciation for 2012, a portion of Southern Company's tax credit utilization will be deferred. Consequently, Southern Company's positive cash flow benefit is estimated to be between \$530 million and \$720 million in 2012.

Construction Program

The subsidiary companies of Southern Company are engaged in continuous construction programs to accommodate existing and estimated future loads on their respective systems. The Southern Company system intends to continue its strategy of developing and constructing new generating facilities, including natural gas, biomass, and solar units at Southern Power, natural gas units and Plant Vogtle Units 3 and 4 at Georgia Power, and the Kemper IGCC at Mississippi Power, as well as adding or changing fuel sources for certain existing units, adding environmental control equipment, and expanding the transmission and distribution systems. For the traditional operating companies, major generation construction projects are subject to state PSC approvals in order to be included in retail rates. While Southern Power generally constructs and acquires generation assets covered by long-term PPAs, any uncontracted capacity could negatively affect future earnings. See Note 7 to the financial statements of Southern Company under Construction

Table of Contents

THE SOUTHERN COMPANY AND SUBSIDIARY COMPANIES

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Program in Item 8 of the Form 10-K for estimated construction expenditures for the next three years. In addition, see Note 3 to the financial statements of Southern Company under Retail Regulatory Matters Georgia Power Nuclear Construction, Retail Regulatory Matters Georgia Power Other Construction, and Integrated Coal Gasification Combined Cycle in Item 8 of the Form 10-K and Note (B) to the Condensed Financial Statements under Retail Regulatory Matters Georgia Power Nuclear Construction and Integrated Coal Gasification Combined Cycle herein for additional information.

Investments in Leveraged Leases

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL Investments in Leveraged Leases of Southern Company in Item 7 and Note 1 to the financial statements of Southern Company under Leveraged Leases in Item 8 of the Form 10-K for additional information.

The recent financial and operational performance of one of Southern Company's lessees and the associated generation assets has raised potential concerns on the part of Southern Company as to the credit quality of the lessee and the residual value of the assets. Southern Company is currently engaged in discussions with the lessee and the holders of the project's nonrecourse debt to restructure the debt payments and the related rental payments to allow additional capital investment in the project to be made to improve the operation of the generation assets and the financial viability of the lease transaction. Southern Company continues to monitor the performance of the underlying assets and to evaluate the ability of the lessee to continue to make the required lease payments. If the attempts at restructuring the project are unsuccessful and the project is ultimately abandoned, the potential impairment loss that would be incurred is approximately \$90 million on an after-tax basis. The ultimate outcome of this matter cannot be determined at this time.

Other Matters

Southern Company and its subsidiaries are involved in various other matters being litigated and regulatory matters that could affect future earnings. In addition, Southern Company and its subsidiaries are subject to certain claims and legal actions arising in the ordinary course of business. The business activities of Southern Company's subsidiaries are subject to extensive governmental regulation related to public health and the environment, such as regulation of air emissions and water discharges. Litigation over environmental issues and claims of various types, including property damage, personal injury, common law nuisance, and citizen enforcement of environmental requirements such as air quality and water standards, has increased generally throughout the U.S. In particular, personal injury and other claims for damages caused by alleged exposure to hazardous materials, and common law nuisance claims for injunctive relief and property damage allegedly caused by greenhouse gas and other emissions, have become more frequent. The ultimate outcome of such pending or potential litigation against Southern Company and its subsidiaries cannot be predicted at this time; however, for current proceedings not specifically reported herein or in Note 3 to the financial statements of Southern Company in Item 8 of the Form 10-K, management does not anticipate that the ultimate liabilities, if any, arising from such current proceedings would have a material effect on Southern Company's financial statements.

See the Notes to the Condensed Financial Statements herein for a discussion of various other contingencies, regulatory matters, and other matters being litigated which may affect future earnings potential.

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL Other Matters of Southern Company in Item 7 of the Form 10-K for additional information regarding the earthquake and tsunami that struck Japan in March 2011. On March 12, 2012, the NRC issued three orders and a request for information based on the NRC task force report recommendations that included, among other items, additional mitigation strategies for beyond-design-basis events, enhanced spent fuel pool instrumentation capabilities, hardened vents for certain classes of containment structures, including the one in use at Plant Hatch, site specific evaluations for seismic and flooding hazards, and various plant evaluations to ensure adequate coping capabilities during station blackout and other conditions. The staff of the NRC expects to issue additional implementation guidance by August 2012. The final form and the resulting impact of any changes to safety requirements for nuclear reactors will be dependent on further review and action by the

Table of Contents

THE SOUTHERN COMPANY AND SUBSIDIARY COMPANIES

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

NRC and cannot be determined at this time. See RISK FACTORS of Southern Company in Item 1A of the Form 10-K for a discussion of certain risks associated with the licensing, construction, and operation of nuclear generating units, including potential impacts that could result from a major incident at a nuclear facility anywhere in the world. The ultimate outcome of these events cannot be determined at this time.

ACCOUNTING POLICIES

Application of Critical Accounting Policies and Estimates

Southern Company prepares its consolidated financial statements in accordance with GAAP. Significant accounting policies are described in Note 1 to the financial statements of Southern Company in Item 8 of the Form 10-K. In the application of these policies, certain estimates are made that may have a material impact on Southern Company's results of operations and related disclosures. Different assumptions and measurements could produce estimates that are significantly different from those recorded in the financial statements. See MANAGEMENT'S DISCUSSION AND ANALYSIS ACCOUNTING POLICIES Application of Critical Accounting Policies and Estimates of Southern Company in Item 7 of the Form 10-K for a complete discussion of Southern Company's critical accounting policies and estimates related to Electric Utility Regulation, Contingent Obligations, Unbilled Revenues, and Pension and Other Postretirement Benefits.

FINANCIAL CONDITION AND LIQUIDITY

Overview

See MANAGEMENT'S DISCUSSION AND ANALYSIS FINANCIAL CONDITION AND LIQUIDITY Overview of Southern Company in Item 7 of the Form 10-K for additional information. Southern Company's financial condition remained stable at March 31, 2012. Southern Company intends to continue to monitor its access to short-term and long-term capital markets as well as its bank credit arrangements to meet future capital and liquidity needs. See Sources of Capital, Financing Activities, and Capital Requirements and Contractual Obligations herein for additional information.

Net cash provided from operating activities totaled \$568 million for the first quarter 2012, a decrease of \$430 million from the corresponding period in 2011. Significant changes in operating cash flow for the first quarter 2012 compared to the corresponding period in 2011 include an increase in fossil fuel stock levels due to reduced consumption as a result of milder weather in the first quarter 2012 and a decrease in accrued taxes primarily due to the timing of tax payments. Net cash used for investing activities totaled \$1.4 billion for the first quarter 2012, an increase of \$543 million from the corresponding period in 2011. This increase was primarily due to property additions to utility plant. Net cash provided from financing activities totaled \$588 million for the first quarter 2012 compared to \$151 million net cash used for financing activities in the corresponding period in 2011. This change was primarily due to an increase in short-term debt outstanding, an increase in long-term debt issuances, and the receipt of an interest-bearing refundable deposit related to a pending asset sale at Mississippi Power.

Significant balance sheet changes for the first quarter 2012 include an increase of \$845 million in total property, plant, and equipment for the construction of generation, transmission, and distribution facilities. Other significant changes include an increase in long-term debt of \$404 million due to senior note issuances.

The market price of Southern Company's common stock at the end of the first quarter 2012 was \$44.93 per share (based on the closing price as reported on the New York Stock Exchange) and the book value was \$20.37 per share, representing a market-to-book ratio of 221%, compared to \$46.29, \$20.32, and 228%, respectively, at the end of 2011. The dividend for the first quarter 2012 was \$0.4725 per share compared to \$0.4550 per share in the first quarter 2011. In April 2012, the quarterly dividend payable in June 2012 was increased to \$0.49 per share.

Table of Contents

THE SOUTHERN COMPANY AND SUBSIDIARY COMPANIES

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Capital Requirements and Contractual Obligations

See MANAGEMENT'S DISCUSSION AND ANALYSIS FINANCIAL CONDITION AND LIQUIDITY Capital Requirements and Contractual Obligations of Southern Company in Item 7 of the Form 10-K for a description of Southern Company's capital requirements for the construction programs of the Southern Company system and other funding requirements associated with scheduled maturities of long-term debt, as well as the related interest, preferred and preference stock dividends, leases, trust funding requirements, other purchase commitments, unrecognized tax benefits and interest, and derivative obligations. Approximately \$1.9 billion will be required through March 31, 2013 to fund maturities and announced redemptions of long-term debt.

The construction programs are subject to periodic review and revision, and actual construction costs may vary from these estimates because of numerous factors. These factors include: changes in business conditions; changes in load projections; changes in environmental statutes and regulations; the outcome of any legal challenges to the environmental rules; changes in generating plants, including unit retirements and replacements and adding or changing fuel sources at existing units, to meet new regulatory requirements; changes in FERC rules and regulations; PSC approvals; changes in legislation; the cost and efficiency of construction labor, equipment, and materials; project scope and design changes; storm impacts; and the cost of capital. In addition, there can be no assurance that costs related to capital expenditures will be fully recovered.

Sources of Capital

Southern Company intends to meet its future capital needs through internal cash flow and external security issuances. Equity capital can be provided from any combination of Southern Company's stock plans, private placements, or public offerings. The amount and timing of additional equity capital to be raised in 2012, as well as in subsequent years, will be contingent on Southern Company's investment opportunities.

Except as described below with respect to potential DOE loan guarantees, the traditional operating companies and Southern Power plan to obtain the funds required for construction and other purposes from sources similar to those used in the past, which were primarily from operating cash flows, security issuances, term loans, short-term borrowings, and equity contributions from Southern Company. However, the amount, type, and timing of any future financings, if needed, will depend upon prevailing market conditions, regulatory approval, and other factors. See MANAGEMENT'S DISCUSSION AND ANALYSIS FINANCIAL CONDITION AND LIQUIDITY Sources of Capital of Southern Company in Item 7 of the Form 10-K for additional information.

In June 2010, Georgia Power reached an agreement with the DOE to accept terms for a conditional commitment for federal loan guarantees that would apply to future Georgia Power borrowings related to the construction of Plant Vogtle Units 3 and 4. Any borrowings guaranteed by the DOE would be full recourse to Georgia Power and secured by a first priority lien on Georgia Power's 45.7% undivided ownership interest in Plant Vogtle Units 3 and 4. Total guaranteed borrowings would not exceed the lesser of 70% of eligible project costs, or approximately \$3.46 billion, and are expected to be funded by the Federal Financing Bank. Final approval and issuance of loan guarantees by the DOE are subject to negotiation of definitive agreements, completion of due diligence by the DOE, receipt of any necessary regulatory approvals, and satisfaction of other conditions. There can be no assurance that the DOE will issue loan guarantees for Georgia Power.

In addition, Mississippi Power has applied to the DOE for federal loan guarantees to finance a portion of the eligible construction costs of the Kemper IGCC. Mississippi Power is in advanced due diligence with the DOE. There can be no assurance that the DOE will issue federal loan guarantees for Mississippi Power. Mississippi Power also received DOE grant funds of \$245 million that were used for the construction of the Kemper IGCC. An additional \$25 million is expected to be received for the initial operation of the Kemper IGCC.

Table of Contents**THE SOUTHERN COMPANY AND SUBSIDIARY COMPANIES****MANAGEMENT'S DISCUSSION AND ANALYSIS OF****FINANCIAL CONDITION AND RESULTS OF OPERATIONS**

Southern Company's current liabilities frequently exceed current assets because of the continued use of short-term debt as a funding source to meet scheduled maturities of long-term debt, as well as cash needs, which can fluctuate significantly due to the seasonality of the business of the Southern Company system. To meet short-term cash needs and contingencies, Southern Company has substantial cash flow from operating activities and access to capital markets, including commercial paper programs which are backed by bank credit facilities.

At March 31, 2012, Southern Company and its subsidiaries had approximately \$1.0 billion of cash and cash equivalents. Committed credit arrangements with banks at March 31, 2012 were as follows:

Company	Expires					Executable Term Loans		Due Within One Year ^(a)	
	2012	2013	2014 and Beyond	Total	Unused	One Year	Two Year	Term Out	No Term Out
	(in millions)			(in millions)		(in millions)		(in millions)	
Southern Company	\$	\$	\$ 1,000	\$ 1,000	\$ 1,000	\$	\$	\$	\$
Alabama Power	121	35	1,150	1,306	1,306	51		51	71
Georgia Power			1,750	1,750	1,745				
Gulf Power	75	35	165	275	275	75		75	35
Mississippi Power	106	25	165	296	296	25	41	66	65
Southern Power			500	500	500				
Other	25	25		50	50	25		25	
Total	\$ 327	\$ 120	\$ 4,730	\$ 5,177	\$ 5,172	\$ 176	\$ 41	\$ 217	\$ 171

(a) Reflects facilities expiring on or before March 31, 2013.

See Note 6 to the financial statements of Southern Company under Bank Credit Arrangements in Item 8 of the Form 10-K and Note (E) to the Condensed Financial Statements under Bank Credit Arrangements herein for additional information.

Most of these arrangements contain covenants that limit debt levels and typically contain cross default provisions that are restricted only to the indebtedness of the individual company. Southern Company and its subsidiaries are currently in compliance with all such covenants.

A portion of the unused credit with banks is allocated to provide liquidity support to the traditional operating companies' variable rate pollution control revenue bonds and commercial paper programs. The amount of variable rate pollution control revenue bonds outstanding requiring liquidity support as of March 31, 2012 was approximately \$1.8 billion.

The traditional operating companies may also meet short-term cash needs through a Southern Company subsidiary organized to issue and sell commercial paper at the request and for the benefit of each of the traditional operating companies.

Table of Contents**THE SOUTHERN COMPANY AND SUBSIDIARY COMPANIES****MANAGEMENT'S DISCUSSION AND ANALYSIS OF****FINANCIAL CONDITION AND RESULTS OF OPERATIONS**

Details of short-term borrowings, excluding \$2 million in notes payable related to other energy service contracts, were as follows:

	Short-term Debt at the End of the Period Weighted		Short-term Debt During the Period ^(a) Weighted		
	Amount Outstanding	Average	Average	Average	Maximum
		Interest		Interest	Amount
		Rate		Rate	Outstanding
	<i>(in millions)</i>		<i>(in millions)</i>		<i>(in millions)</i>
March 31, 2012:					
Commercial paper	\$ 728	0.3%	\$583	0.3%	\$938
Short-term bank debt	300	1.1%	290	1.2%	300
Total	\$1,028	0.6%	\$873	0.6%	

(a) Average and maximum amounts are based upon daily balances during the period.

Management believes that the need for working capital can be adequately met by utilizing commercial paper programs, lines of credit, and cash.

Credit Rating Risk

Southern Company does not have any credit arrangements that would require material changes in payment schedules or terminations as a result of a credit rating downgrade. There are certain contracts that could require collateral, but not accelerated payment, in the event of a credit rating change of certain subsidiaries to BBB and Baa2, or BBB- and/or Baa3 or below. These contracts are for physical electricity purchases and sales, fuel purchases, fuel transportation and storage, emissions allowances, energy price risk management, and construction of new generation. The maximum potential collateral requirements under these contracts at March 31, 2012 were as follows:

Credit Ratings	Maximum Potential Collateral
	Requirements
	<i>(in millions)</i>
At BBB and Baa2	\$ 9
At BBB- and/or Baa3	624
Below BBB- and/or Baa3	2,833

Generally, collateral may be provided by a Southern Company guaranty, letter of credit, or cash. Additionally, any credit rating downgrade could impact Southern Company's ability to access capital markets, particularly the short-term debt market.

Market Price Risk

Southern Company is exposed to market risks, primarily commodity price risk and interest rate risk. Southern Company may also occasionally have limited exposure to foreign currency exchange rates. To manage the volatility attributable to these exposures, Southern Company nets the exposures, where possible, to take advantage of natural offsets and enters into various derivative transactions for the remaining exposures pursuant to Southern Company's policies in areas such as counterparty exposure and risk management practices. Southern Company's policy is that derivatives are to be used primarily for hedging purposes and mandates strict adherence to all applicable risk management policies. Derivative positions are monitored using techniques including, but not limited to, market valuation, value at risk, stress testing, and sensitivity analysis.

Table of Contents**THE SOUTHERN COMPANY AND SUBSIDIARY COMPANIES****MANAGEMENT'S DISCUSSION AND ANALYSIS OF****FINANCIAL CONDITION AND RESULTS OF OPERATIONS**

Due to cost-based rate regulation and other various cost recovery mechanisms, the traditional operating companies continue to have limited exposure to market volatility in interest rates, foreign currency, commodity fuel prices, and prices of electricity. In addition, Southern Power's exposure to market volatility in commodity fuel prices and prices of electricity is limited because its long-term sales contracts shift substantially all fuel cost responsibility to the purchaser. However, Southern Power has been and may continue to be exposed to market volatility in energy-related commodity prices as a result of sales of uncontracted generating capacity. To mitigate residual risks relative to movements in electricity prices, the traditional operating companies enter into physical fixed-price contracts or heat-rate contracts for the purchase and sale of electricity through the wholesale electricity market and, to a lesser extent, into financial hedge contracts for natural gas purchases. The traditional operating companies continue to manage fuel-hedging programs implemented per the guidelines of their respective state PSCs. Southern Company had no material change in market risk exposure for the first quarter 2012 when compared with the December 31, 2011 reporting period.

The changes in fair value of energy-related derivative contracts, substantially all of which are composed of regulatory hedges, for the three months ended March 31, 2012 were as follows:

	First Quarter
	2012
	Changes
	Fair Value
	<i>(in millions)</i>
Contracts outstanding at the beginning of the period, assets (liabilities), net	\$(231)
Contracts realized or settled	50
Current period changes ^(a)	(84)
Contracts outstanding at the end of the period, assets (liabilities), net	\$(265)

(a) Current period changes also include the changes in fair value of new contracts entered into during the period, if any. The change in the fair value positions of the energy-related derivative contracts for the three months ended March 31, 2012 was a decrease of \$34 million, of which \$18 million related to natural gas swaps, \$15 million related to natural gas options, and \$1 million related to other energy-related derivatives. The change is attributable to both the volume of mmBtu and the price of natural gas. At March 31, 2012, Southern Company had a net hedge volume of 221 million mmBtu, which consisted of 123 million mmBtu of swaps and 98 million mmBtu of options. The weighted average swap contract cost was approximately \$1.71 per mmBtu above market prices. At December 31, 2011, Southern Company had a net hedge volume of 189 million mmBtu, which consisted of 123 million mmBtu of swaps and 66 million mmBtu of options. The weighted average swap contract cost was approximately \$1.51 per mmBtu above market prices. The change in option premiums is primarily attributable to the volatility of the market and the underlying change in the natural gas price. The majority of the natural gas hedge gains and losses are recovered through the traditional operating companies' fuel cost recovery clauses.

The net fair value of energy-related derivative contracts by hedge designation was reflected in the financial statements as follows:

Asset (Liability) Derivatives	March 31, 2012	December 31, 2011
	<i>(in millions)</i>	
Regulatory hedges	\$(249)	\$(221)
Cash flow hedges	(1)	(1)
Not designated	(15)	(9)
Total fair value	\$(265)	\$(231)

Energy-related derivative contracts which are designated as regulatory hedges relate to the traditional operating companies' fuel-hedging programs, where gains and losses are initially recorded as regulatory liabilities and assets, respectively, and then are included in fuel expense as they are recovered through the fuel cost recovery clauses. Gains and losses on energy-related derivatives that are designated as cash flow hedges are mainly used by Southern Power to

Table of Contents**THE SOUTHERN COMPANY AND SUBSIDIARY COMPANIES****MANAGEMENT'S DISCUSSION AND ANALYSIS OF****FINANCIAL CONDITION AND RESULTS OF OPERATIONS**

hedge anticipated purchases and sales and are initially deferred in OCI before being recognized in income in the same period as the hedged transaction. Gains and losses on energy-related derivative contracts that are not designated or fail to qualify as hedges are recognized in the statements of income as incurred.

Total net unrealized pre-tax gains (losses) recognized in income for the three months ended March 31, 2012 and 2011 were not material.

Southern Company uses over-the-counter contracts that are not exchange traded but are fair valued using prices which are market observable, and thus fall into Level 2. See Note (C) to the Condensed Financial Statements herein for further discussion on fair value measurements. The maturities of the energy-related derivative contracts and the level of the fair value hierarchy in which they fall at March 31, 2012 were as follows:

March 31, 2012				
Fair Value Measurements				
	Total Fair Value	Year 1	Maturity Years 2&3	Years 4&5
	<i>(in millions)</i>			
Level 1	\$	\$	\$	\$
Level 2	(265)	(197)	(66)	(2)
Level 3				
Fair value of contracts outstanding at end of period	\$(265)	\$(197)	\$(66)	\$ (2)

The Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) enacted in July 2010 could impact the use of over-the-counter derivatives by Southern Company. Regulations to implement the Dodd-Frank Act could impose additional requirements on the use of over-the-counter derivatives, such as margin and reporting requirements, which could affect both the use and cost of over-the-counter derivatives. The impact, if any, cannot be determined until all relevant regulations are finalized.

For additional information, see MANAGEMENT'S DISCUSSION AND ANALYSIS FINANCIAL CONDITION AND LIQUIDITY Market Price Risk of Southern Company in Item 7 and Note 1 under Financial Instruments and Note 11 to the financial statements of Southern Company in Item 8 of the Form 10-K and Note (H) to the Condensed Financial Statements herein.

Financing Activities

During the first quarter 2012, Southern Company issued approximately 3.6 million shares of common stock for \$115 million through employee and director stock plans. The proceeds were primarily used for general corporate purposes, including the investment by Southern Company in its subsidiaries, and to repay short-term indebtedness. While Southern Company continues to issue additional equity through its employee and director equity compensation plans, Southern Company is not currently issuing additional shares of common stock through the Southern Investment Plan or its employee savings plan. All sales under the Southern Investment Plan and the employee savings plan are currently being funded with shares acquired on the open market by the independent plan administrators.

Table of Contents**THE SOUTHERN COMPANY AND SUBSIDIARY COMPANIES****MANAGEMENT'S DISCUSSION AND ANALYSIS OF****FINANCIAL CONDITION AND RESULTS OF OPERATIONS**

The following table outlines the debt financing activities for the quarter ended March 31, 2012:

Company*	Senior Note Issuances	Senior Note Redemptions and Maturities	Other Long-Term Debt Redemptions and Maturities
	<i>(in millions)</i>		
Southern Company	\$	\$500	\$
Alabama Power	250		1
Georgia Power	750		250
Mississippi Power	400		75
Total	\$1,400	\$500	\$326

* Gulf Power and Southern Power did not issue or redeem any long-term debt during the first quarter 2012.

Southern Company's subsidiaries used the proceeds of the debt issuances shown in the table above for the redemptions and maturities shown in the table above to repay short-term indebtedness and for general corporate purposes, including their respective continuous construction programs.

On January 17, 2012, Southern Company's \$500 million aggregate principal amount of Series 2007A 5.30% Senior Notes matured.

On March 6, 2012, Mississippi Power received a \$150 million interest-bearing refundable deposit from SMEPA to be applied to the sale price for the pending sale of a 17.5% undivided interest in the Kemper IGCC. Until the acquisition is closed, the deposit bears interest at Mississippi Power's AFUDC rate and is refundable to SMEPA upon termination of the asset purchase agreement related to such purchase, within 60 days of a request by SMEPA for a full or partial refund, or within 15 days at SMEPA's discretion in the event that Mississippi Power's senior unsecured credit rating falls below a BBB+ and/or Baa1.

Subsequent to March 31, 2012, Alabama Power redeemed \$250 million aggregate principal amount of its Series 2007B 5.875% Senior Notes due April 1, 2047.

Subsequent to March 31, 2012, Mississippi Power announced the redemption of \$90 million aggregate principal amount of its Series E 5-5/8% Senior Notes due May 1, 2033 that will occur on May 15, 2012.

In addition to any financings that may be necessary to meet capital requirements and contractual obligations, Southern Company and its subsidiaries plan to continue, when economically feasible, a program to retire higher-cost securities and replace these obligations with lower-cost capital if market conditions permit.

Table of Contents

PART I

Item 3. Quantitative And Qualitative Disclosures About Market Risk.

See MANAGEMENT'S DISCUSSION AND ANALYSIS FINANCIAL CONDITION AND LIQUIDITY Market Price Risk herein for each registrant and Note 1 to the financial statements of each registrant under Financial Instruments, Note 11 to the financial statements of Southern Company, Alabama Power, and Georgia Power, Note 10 to the financial statements of Gulf Power and Mississippi Power, and Note 9 to the financial statements of Southern Power in Item 8 of the Form 10-K. Also, see Note (H) to the Condensed Financial Statements herein for information relating to derivative instruments.

Item 4. Controls and Procedures.

(a) Evaluation of disclosure controls and procedures.

As of the end of the period covered by this quarterly report, Southern Company, Alabama Power, Georgia Power, Gulf Power, Mississippi Power, and Southern Power conducted separate evaluations under the supervision and with the participation of each company's management, including the Chief Executive Officer and the Chief Financial Officer, of the effectiveness of the design and operation of the disclosure controls and procedures (as defined in Sections 13a-15(e) and 15d-15(e) of the Securities Exchange Act of 1934). Based upon these evaluations, the Chief Executive Officer and the Chief Financial Officer, in each case, concluded that the disclosure controls and procedures are effective.

(b) Changes in internal controls.

There have been no changes in Southern Company's and Alabama Power's internal control over financial reporting (as such term is defined in Rules 13a-15(f) and 15d-15(f) under the Securities Exchange Act of 1934) during the first quarter 2012 that have materially affected or are reasonably likely to materially affect Southern Company's or Alabama Power's internal control over financial reporting, other than as described in the next sentence. During the first quarter 2012, Alabama Power implemented new accounts payable, supply chain, and work management systems. The implementation of these systems provides additional operational and internal control benefits including system security and automation of previously manual controls. These process improvement initiatives were not in response to an identified internal control deficiency.

There have been no changes in Georgia Power's, Gulf Power's, Mississippi Power's, or Southern Power's internal control over financial reporting (as such term is defined in Rules 13a-15(f) and 15d-15(f) under the Securities Exchange Act of 1934) during the first quarter 2012 that have materially affected or are reasonably likely to materially affect Georgia Power's, Gulf Power's, Mississippi Power's, or Southern Power's internal control over financial reporting.

Table of Contents

ALABAMA POWER COMPANY

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

FIRST QUARTER 2012 vs. FIRST QUARTER 2011

OVERVIEW

Alabama Power operates as a vertically integrated utility providing electricity to retail and wholesale customers within its traditional service territory located within the State of Alabama in addition to wholesale customers in the Southeast. Many factors affect the opportunities, challenges, and risks of Alabama Power's business of selling electricity. These factors include the ability to maintain a constructive regulatory environment, to maintain and grow energy sales given economic conditions, and to effectively manage and secure timely recovery of costs. These costs include those related to projected long-term demand growth, increasingly stringent environmental standards, fuel, capital expenditures, and restoration following major storms. Appropriately balancing required costs and capital expenditures with customer prices will continue to challenge Alabama Power for the foreseeable future.

Alabama Power continues to focus on several key performance indicators. These indicators include customer satisfaction, plant availability, system reliability, and net income after dividends on preferred and preference stock. For additional information on these indicators, see MANAGEMENT'S DISCUSSION AND ANALYSIS OVERVIEW Key Performance Indicators of Alabama Power in Item 7 of the Form 10-K.

RESULTS OF OPERATIONS

Net Income

First Quarter 2012 vs. First Quarter 2011

<i>(change in millions)</i>	<i>(% change)</i>
\$(26)	(17.1)

Alabama Power's net income after dividends on preferred and preference stock for the first quarter 2012 was \$126 million compared to \$152 million for the corresponding period in 2011. The decrease in net income was related to a decrease in weather-related revenues due to milder weather in the first quarter 2012 and an increase in operations and maintenance expenses. The reductions in net income were partially offset by increases in revenues associated with the elimination of a tax-related adjustment under Alabama Power's rate structure and an increase in energy sales due to an increase in customer demand. See BUSINESS Rate Matters Rate Structure and Cost Recovery Plans of Alabama Power in Item 1 and MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL PSC Matters Retail Rate Adjustments of Alabama Power in Item 7 of the Form 10-K for information regarding the rate structure of Alabama Power.

Retail Revenues

First Quarter 2012 vs. First Quarter 2011

<i>(change in millions)</i>	<i>(% change)</i>
\$(34)	(3.0)

In the first quarter 2012, retail revenues were \$1.09 billion compared to \$1.13 billion for the corresponding period in 2011.

Table of Contents**ALABAMA POWER COMPANY**

MANAGEMENT'S DISCUSSION AND ANALYSIS OF
FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Weather	(50)	(4.5)
Fuel and other cost recovery	(28)	(2.5)
Retail – current year	\$1,092	(3.0)%

Revenues associated with changes in rates and pricing increased in the first quarter 2012 when compared to the corresponding period in 2011 primarily due to the elimination of a tax-related adjustment under Alabama Power's rate structure that was effective with October 2011 billings, slightly offset by decreased revenues associated with Rate Certificated New Plant Environmental.

Revenues attributable to changes in sales increased in the first quarter 2012 when compared to the corresponding period in 2011. Industrial KWH energy sales increased 3.2% due to an increase in demand resulting from changes in production levels primarily in the primary metals, chemicals, and forest products sectors, partially offset by a decrease in the stone, clay, and glass sector. Weather-adjusted residential KWH energy sales increased 1.5% due to an increase in customer demand. The decrease in weather-adjusted commercial KWH energy sales was not material.

Revenues resulting from changes in weather decreased in the first quarter 2012 when compared to the corresponding period in 2011. Alabama Power's service territory experienced milder weather conditions in first quarter 2012 resulting in decreases of 9.0% and 1.6% for residential and commercial sales revenue, respectively.

Fuel and other cost recovery revenues decreased in the first quarter 2012 when compared to the corresponding period in 2011 primarily due to lower fuel costs associated with decreased KWH generation and lower average cost per KWH generated due to lower natural gas prices. Electric rates include provisions to recognize the full recovery of fuel costs, purchased power costs, PPAs certificated by the Alabama PSC, and costs associated with the NDR. Under these provisions, fuel and other cost recovery revenues generally equal fuel and other cost recovery expenses and do not affect net income.

See BUSINESS – Rate Matters – Rate Structure and Cost Recovery Plans of Alabama Power in Item 1, MANAGEMENT'S DISCUSSION AND ANALYSIS – FUTURE EARNINGS POTENTIAL – PSC Matters – Retail Rate Adjustments of Alabama Power in Item 7 and Note 3 to the financial statements of Alabama Power under Retail Regulatory Matters in Item 8 of the Form 10-K for additional information.

Table of Contents**ALABAMA POWER COMPANY**

MANAGEMENT'S DISCUSSION AND ANALYSIS OF
FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Wholesale Revenues – Non-Affiliates

First Quarter 2012 vs. First Quarter 2011

<i>(change in millions)</i>	<i>(% change)</i>
\$(7)	(10.3)

Wholesale revenues from sales to non-affiliates will vary depending on the market prices of available wholesale energy compared to the cost of Alabama Power's and the Southern Company system's generation, demand for energy within the Southern Company system's service territory, and availability of the Southern Company system's generation. Increases and decreases in energy revenues that are driven by fuel prices are accompanied by an increase or decrease in fuel costs and do not have a significant impact on net income.

In the first quarter 2012, wholesale revenues from non-affiliates were \$61 million compared to \$68 million for the corresponding period in 2011, reflecting an \$8 million decrease in revenue from energy sales and a \$1 million increase in capacity revenue. The decrease was primarily due to an 8.1% decrease in KWH sales and a 1.3% decrease in the price of energy.

Wholesale Revenues – Affiliates

First Quarter 2012 vs. First Quarter 2011

<i>(change in millions)</i>	<i>(% change)</i>
\$(61)	(81.3)

Wholesale revenues from sales to affiliated companies within the Southern Company system will vary depending on demand and the availability and cost of generating resources at each company. These affiliate sales are made in accordance with the IIC, as approved by the FERC. These transactions do not have a significant impact on earnings since this energy is generally sold at marginal cost and energy purchases are generally offset by energy revenues through Alabama Power's energy cost recovery clauses.

In the first quarter 2012, wholesale revenues from affiliates were \$14 million compared to \$75 million for the corresponding period in 2011. The decrease was due to a 24.3% decrease in the price of energy and a 75.1% decrease in KWH sales.

Fuel and Purchased Power Expenses

First Quarter 2012 vs. First Quarter 2011

	<i>(change in millions)</i>	<i>(% change)</i>
Fuel	\$(89)	(22.5)
Purchased power – non-affiliates	4	36.4
Purchased power – affiliates	(6)	(13.0)

Edgar Filing: ALABAMA POWER CO - Form 10-Q

Total fuel and purchased power expenses	\$(91)
---	--------

In the first quarter 2012, total fuel and purchased power expenses were \$361 million compared to \$452 million for the corresponding period in 2011. The decrease was primarily due to an \$84 million decrease related to a reduction in total KWHs generated as a result of milder weather in the first quarter 2012, a \$4 million decrease in the cost of fuel, and an \$8 million decrease in the average cost of purchased power.

Fuel and purchased power energy transactions do not have a significant impact on earnings since energy expenses are generally offset by energy revenues through Alabama Power's Energy Cost Recovery Rate mechanism. See FUTURE EARNINGS POTENTIAL - PSC Matters - Retail Fuel Cost Recovery herein for additional information.

Table of Contents**ALABAMA POWER COMPANY**

MANAGEMENT'S DISCUSSION AND ANALYSIS OF
FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Details of Alabama Power's generation and purchased power were as follows:

	First Quarter 2012	First Quarter 2011
Total generation (<i>billions of KWHs</i>)	14	16
Total purchased power (<i>billions of KWHs</i>)	1	1
Sources of generation (<i>percent</i>)		
Coal	42	55
Nuclear	27	23
Gas	20	15
Hydro	11	7
Cost of fuel, generated (<i>cents per net KWH</i>)		
Coal	3.43	2.99
Nuclear	0.74	0.67
Gas	3.00	4.16
Average cost of fuel, generated (<i>cents per net KWH</i>)*	2.51	2.62
Average cost of purchased power (<i>cents per net KWH</i>)**	4.60	5.26

* KWHs generated by hydro are excluded from the average cost of fuel, generated.

** Average cost of purchased power includes fuel purchased by Alabama Power for tolling agreements where power is generated by the provider.

Fuel

In the first quarter 2012, fuel expense was \$306 million compared to \$395 million for the corresponding period in 2011. The \$89 million decrease was due to a 35.7% decrease in KWHs generated by coal and a 27.9% decrease in the average cost of KWHs generated by natural gas, which excludes fuel associated with tolling agreements, slightly offset by a 10% increase in KWHs generated by natural gas.

Purchased Power - Non-Affiliates

In the first quarter 2012, purchased power expense from non-affiliates was \$15 million compared to \$11 million for the corresponding period in 2011. The increase was related to a 296.5% increase in the amount of energy purchased, partially offset by a 68.0% decrease in the average cost per KWH.

Energy purchases from non-affiliates will vary depending on the market prices of wholesale energy as compared to the cost of the Southern Company system's generation, demand for energy within the Southern Company system's service territory, and the availability of the Southern Company system's generation.

Edgar Filing: ALABAMA POWER CO - Form 10-Q

Purchased Power Affiliates

In the first quarter 2012, purchased power expense from affiliates was \$40 million compared to \$46 million for the corresponding period in 2011. The decrease was related to a 13.9% decrease in the amount of energy purchased, slightly offset by a 2.1% increase in the average cost per KWH.

Energy purchases from affiliates will vary depending on demand for energy and the availability and cost of generating resources at each company within the Southern Company system. These purchases are made in accordance with the IIC or other contractual agreements, as approved by the FERC.

Table of Contents**ALABAMA POWER COMPANY**

MANAGEMENT'S DISCUSSION AND ANALYSIS OF
FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Other Operations and Maintenance Expenses

First Quarter 2012 vs. First Quarter 2011

<i>(change in millions)</i>	<i>(% change)</i>
\$24	8.1

In the first quarter 2012, other operations and maintenance expenses were \$321 million compared to \$297 million for the corresponding period in 2011. Administrative and general expenses increased \$18 million due to benefit-related expenses, affiliated service company expenses, labor expenses, and property insurance expenses. Nuclear production expenses increased \$6 million primarily due to the amortization of nuclear outage expenses. See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL PSC Matters Nuclear Outage Accounting Order of Alabama Power in Item 7 of the Form 10-K for additional information.

Income Taxes

First Quarter 2012 vs. First Quarter 2011

<i>(change in millions)</i>	<i>(% change)</i>
\$(12)	(12.5)

For the first quarter 2012, income taxes were \$84 million compared to \$96 million for the corresponding period in 2011. The decrease was primarily due to lower pre-tax earnings as a result of lower revenues due to milder weather.

FUTURE EARNINGS POTENTIAL

The results of operations discussed above are not necessarily indicative of Alabama Power's future earnings potential. The level of Alabama Power's future earnings depends on numerous factors that affect the opportunities, challenges, and risks of Alabama Power's primary business of selling electricity. These factors include Alabama Power's ability to maintain a constructive regulatory environment that continues to allow for the timely recovery of prudently incurred costs during a time of increasing costs. Future earnings in the near term will depend, in part, upon maintaining energy sales which are subject to a number of factors. These factors include weather, competition, new energy contracts with neighboring utilities, energy conservation practiced by customers, the price of electricity, the price elasticity of demand, and the rate of economic growth or decline in Alabama Power's service territory. Changes in economic conditions impact sales for Alabama Power and the pace of the economic recovery remains uncertain. The timing and extent of the economic recovery will impact growth and may impact future earnings. For additional information relating to these issues, see RISK FACTORS in Item 1A and MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL of Alabama Power in Item 7 of the Form 10-K.

Environmental Matters

Compliance costs related to federal and state environmental statutes and regulations could affect earnings if such costs cannot continue to be fully recovered in rates on a timely basis. Environmental compliance spending over the next several years may differ materially from the amounts estimated. The timing, specific requirements, and estimated costs could change as environmental statutes and regulations are adopted or modified. Further, higher costs that are recovered through regulated rates could contribute to reduced demand for electricity, which could

Edgar Filing: ALABAMA POWER CO - Form 10-Q

negatively affect results of operations, cash flows, and financial condition. See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - Environmental Matters of Alabama Power in Item 7 and Note 3 to the financial statements of Alabama Power under Environmental Matters in Item 8 of the Form 10-K for additional information.

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

New Source Review Actions

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL Environmental Matters New Source Review Actions of Alabama Power in Item 7 and Note 3 to the financial statements of Alabama Power under Environmental Matters New Source Review Actions in Item 8 of the Form 10-K for additional information. On February 23, 2012, the EPA filed a motion in the U.S. District Court for the Northern District of Alabama seeking vacatur of the judgment and recusal of the judge in the case involving Alabama Power. At the same time, the EPA asked the U.S. Court of Appeals for the Eleventh Circuit to stay its appeal of the judgment in favor of Alabama Power. Alabama Power filed oppositions to the EPA's motion and its request for a stay. On March 29, 2012, the U.S. Court of Appeals for the Eleventh Circuit denied the EPA's request to stay its appeal. The U.S. District Court for the Northern District of Alabama has not ruled on the EPA's motion seeking vacatur of the judgment. The ultimate outcome of this matter cannot be determined at this time.

Climate Change Litigation

Hurricane Katrina Case

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL Environmental Matters Climate Change Litigation Hurricane Katrina Case of Alabama Power in Item 7 and Note 3 to the financial statements of Alabama Power under Environmental Matters Climate Change Litigation Hurricane Katrina Case in Item 8 of the Form 10-K for additional information. On March 20, 2012, the U.S. District Court for the Southern District of Mississippi dismissed the amended class action complaint filed on May 27, 2011 by the plaintiffs. On April 16, 2012, the plaintiffs appealed the case to the U.S. Court of Appeals for the Fifth Circuit. The ultimate outcome of this matter cannot be determined at this time.

Environmental Statutes and Regulations

General

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL Environmental Matters Environmental Statutes and Regulations General of Alabama Power in Item 7 of the Form 10-K for information regarding Alabama Power's estimated base level capital expenditures to comply with existing statutes and regulations for 2012 through 2014, as well as Alabama Power's preliminary estimates for potential incremental environmental compliance investments associated with complying with the EPA's final Mercury and Air Toxics Standards (MATS) rule (formerly referred to as the Utility Maximum Achievable Control Technology rule) and the EPA's proposed water and coal combustion byproducts rules.

Alabama Power is continuing to develop its compliance strategy and to assess the potential costs of complying with the MATS rule and the EPA's proposed water and coal combustion byproducts rules. As part of its compliance strategy, Alabama Power has entered into agreements for the construction of two baghouses to control the emissions of mercury and particulates from generating units with an aggregate capacity of 1,901 MWs. The cost of the two baghouses is included in the estimated costs associated with compliance with the MATS rule detailed in the Form 10-K, as referenced above.

Alabama Power's compliance strategy, including potential unit retirement and replacement decisions, and future environmental capital expenditures are dependent on a final assessment of the MATS rule and will be affected by the final requirements of new or revised environmental regulations that are promulgated, including any proposed environmental regulations; the outcome of any legal challenges to the environmental rules; the cost, availability, and existing inventory of emissions allowances; and Alabama Power's fuel mix. These costs may arise from existing unit retirements, installation of additional environmental controls, upgrades to the transmission system, the addition of new

Table of Contents

ALABAMA POWER COMPANY

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

generating resources, and changing fuel sources for certain existing units. Alabama Power's preliminary analysis further indicates that the short timeframe for compliance with the MATS rule could significantly affect electric system reliability and cause an increase in costs of materials and services. The ultimate outcome of these matters cannot be determined at this time.

As part of Southern Electric Generating Company's (SEGCO) environmental compliance strategy, the Board of Directors of SEGCO approved adding natural gas as the primary fuel source in 2015 for its 1,000 MWs of generating capacity and the construction of the necessary natural gas pipeline. SEGCO is jointly owned by Alabama Power and Georgia Power. The capacity of SEGCO's units is sold to Alabama Power and Georgia Power through a PPA. See Note 4 to the financial statements of Alabama Power in Item 8 of the Form 10-K for additional information. The impact of SEGCO's ultimate compliance strategy on such PPA costs cannot be determined at this time; however, if such costs cannot continue to be recovered through retail rates, they could have a material impact on Alabama Power's financial statements.

Air Quality

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - Environmental Matters - Environmental Statutes and Regulations - Air Quality of Alabama Power in Item 7 of the Form 10-K for additional information on the eight-hour ozone air quality standards and the MATS rule.

On May 1, 2012, the EPA released its final determination of nonattainment areas based on the 2008 eight-hour ozone air quality standards. None of the areas within Alabama Power's service territory were designated as nonattainment areas.

Numerous petitions for administrative reconsideration of the MATS rule, including a petition by Southern Company and its subsidiaries, including Alabama Power, have been filed with the EPA. Challenges to the final rule have also been filed in the U.S. District Court of Appeals for the District of Columbia by numerous states, environmental organizations, industry groups, and others. The impact of the MATS rule will depend on the outcome of these and any other legal challenges and, therefore, cannot be determined at this time.

Coal Combustion Byproducts

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - Environmental Matters - Environmental Statutes and Regulations - Coal Combustion Byproducts of Alabama Power in Item 7 of the Form 10-K for additional information. On April 5, 2012, 10 environmental groups filed a lawsuit in the U.S. District Court for the District of Columbia seeking to require the EPA to complete its rulemaking process and issue final regulations pertaining to the regulation of coal combustion byproducts as soon as possible. Other parties are expected to file similar challenges. The ultimate outcome of this matter cannot be determined at this time.

Global Climate Issues

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - Environmental Matters - Global Climate Issues of Alabama Power in Item 7 of the Form 10-K for additional information. On April 13, 2012, the EPA published proposed regulations to establish standards of performance for greenhouse gas emissions from new fossil fuel steam electric generating units. As proposed, the standards would not apply to existing units. The EPA has delayed its plans to propose greenhouse gas emissions performance standards for modified sources and emissions guidelines for existing sources. The impact of this rulemaking will depend on the scope and specific requirements of the final rule and the outcome of any legal challenges and, therefore, cannot be determined at this time.

PSC Matters

Retail Fuel Cost Recovery

Edgar Filing: ALABAMA POWER CO - Form 10-Q

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - PSC Matters - Fuel Cost Recovery of Alabama Power in Item 7 and Note 3 to the financial statements of Alabama Power under Retail Regulatory Matters - Fuel Cost Recovery in Item 8 of the Form 10-K for information regarding Alabama Power's fuel cost recovery. Alabama Power's under recovered fuel costs as of March 31, 2012 totaled \$6 million as compared to \$31

Table of Contents

ALABAMA POWER COMPANY

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

million at December 31, 2011. These under recovered fuel costs at March 31, 2012 are included in deferred under recovered regulatory clause revenues on Alabama Power's Condensed Balance Sheets herein. This classification is based on an estimate which includes such factors as weather, generation availability, energy demand, and the price of energy. A change in any of these factors could have a material impact on the timing of any recovery of the under recovered fuel costs.

Income Tax Matters

Bonus Depreciation

In December 2010, the Tax Relief, Unemployment Insurance Reauthorization, and Job Creation Act of 2010 (Tax Relief Act) was signed into law. Major tax incentives in the Tax Relief Act include 100% bonus depreciation for property placed in service after September 8, 2010 and through 2011 (and for certain long-term construction projects to be placed in service in 2012) and 50% bonus depreciation for property placed in service in 2012 (and for certain long-term construction projects to be placed in service in 2013), which will have a positive impact on the future cash flows of Alabama Power through 2013. Consequently, Alabama Power's positive cash flow benefit is estimated to be between \$85 million and \$110 million in 2012.

Other Matters

Alabama Power is involved in various other matters being litigated and regulatory matters that could affect future earnings. In addition, Alabama Power is subject to certain claims and legal actions arising in the ordinary course of business. Alabama Power's business activities are subject to extensive governmental regulation related to public health and the environment, such as regulation of air emissions and water discharges. Litigation over environmental issues and claims of various types, including property damage, personal injury, common law nuisance, and citizen enforcement of environmental requirements such as air quality and water standards, has increased generally throughout the U.S. In particular, personal injury and other claims for damages caused by alleged exposure to hazardous materials, and common law nuisance claims for injunctive relief and property damage allegedly caused by greenhouse gas and other emissions, have become more frequent. The ultimate outcome of such pending or potential litigation against Alabama Power cannot be predicted at this time; however, for current proceedings not specifically reported herein or in Note 3 to the financial statements of Alabama Power in Item 8 of the Form 10-K, management does not anticipate that the ultimate liabilities, if any, arising from such current proceedings would have a material effect on Alabama Power's financial statements.

See the Notes to the Condensed Financial Statements herein for a discussion of various other contingencies, regulatory matters, and other matters being litigated which may affect future earnings potential.

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - Other Matters of Alabama Power in Item 7 of the Form 10-K for additional information regarding the earthquake and tsunami that struck Japan in March 2011. On March 12, 2012, the NRC issued three orders and a request for information based on the NRC task force report recommendations that included, among other items, additional mitigation strategies for beyond-design-basis events, enhanced spent fuel pool instrumentation capabilities, hardened vents for certain classes of containment structures, site specific evaluations for seismic and flooding hazards, and various plant evaluations to ensure adequate coping capabilities during station blackout and other conditions. The staff of the NRC expects to issue additional implementation guidance by August 2012. The final form and the resulting impact of any changes to safety requirements for nuclear reactors will be dependent on further review and action by the NRC and cannot be determined at this time. See RISK FACTORS of Alabama Power in Item 1A of the Form 10-K for a discussion of certain risks associated with the operation of nuclear generating units, including potential impacts that could result from a major incident at a nuclear facility anywhere in the world. The ultimate outcome of these events cannot be determined at this time.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

ACCOUNTING POLICIES

Application of Critical Accounting Policies and Estimates

Alabama Power prepares its financial statements in accordance with GAAP. Significant accounting policies are described in Note 1 to the financial statements of Alabama Power in Item 8 of the Form 10-K. In the application of these policies, certain estimates are made that may have a material impact on Alabama Power's results of operations and related disclosures. Different assumptions and measurements could produce estimates that are significantly different from those recorded in the financial statements. See MANAGEMENT'S DISCUSSION AND ANALYSIS - ACCOUNTING POLICIES - Application of Critical Accounting Policies and Estimates of Alabama Power in Item 7 of the Form 10-K for a complete discussion of Alabama Power's critical accounting policies and estimates related to Electric Utility Regulation, Contingent Obligations, and Pension and Other Postretirement Benefits.

FINANCIAL CONDITION AND LIQUIDITY

Overview

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FINANCIAL CONDITION AND LIQUIDITY - Overview of Alabama Power in Item 7 of the Form 10-K for additional information. Alabama Power's financial condition remained stable at March 31, 2012. Alabama Power intends to continue to monitor its access to short-term and long-term capital markets as well as its bank credit arrangements to meet future capital and liquidity needs. See Sources of Capital, Financing Activities, and Capital Requirements and Contractual Obligations herein for additional information.

Net cash provided from operating activities totaled \$140 million for the first three months of 2012, a decrease of \$187 million as compared to the first three months of 2011. The decrease in cash provided from operating activities was primarily due to the timing of income tax payments and refunds, an increase in fossil fuel stock, and a decrease in deferred income taxes. The decrease was partially offset by an increase in receivables. Net cash used for investing activities totaled \$235 million for the first three months of 2012 primarily due to gross property additions related to nuclear fuel and transmission, distribution, other production, and steam generation equipment. Net cash provided by financing activities totaled \$106 million for the first three months of 2012. This was primarily due to the issuances of senior notes, partially offset by the payment of common stock dividends. Fluctuations in cash flow from financing activities vary year to year based on capital needs and the maturity or redemption of securities.

Significant balance sheet changes for the first three months of 2012 include increases of \$250 million of securities due within one year, \$86 million in property, plant, and equipment associated with routine property additions and nuclear fuel, and \$81 million in fossil fuel stock, at average cost, and a decrease of \$97 million in other accounts payable.

Capital Requirements and Contractual Obligations

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FINANCIAL CONDITION AND LIQUIDITY - Capital Requirements and Contractual Obligations of Alabama Power in Item 7 of the Form 10-K for a description of Alabama Power's capital requirements for its construction program, scheduled maturities of long-term debt, as well as the related interest, derivative obligations, preferred and preference stock dividends, leases, purchase commitments, and trust funding requirements. Approximately \$750 million will be required through March 31, 2013 to fund maturities and announced redemptions of long-term debt.

Table of Contents**ALABAMA POWER COMPANY****MANAGEMENT'S DISCUSSION AND ANALYSIS OF****FINANCIAL CONDITION AND RESULTS OF OPERATIONS**

The construction program is subject to periodic review and revision, and actual construction costs may vary from these estimates because of numerous factors. These factors include: changes in business conditions; changes in load projections; changes in environmental statutes and regulations; the outcome of any legal challenges to the environmental rules; changes in generating plants, including unit retirements and replacements and adding or changing fuel sources at existing units, to meet new regulatory requirements; changes in FERC rules and regulations; Alabama PSC approvals; changes in legislation; the cost and efficiency of construction labor, equipment, and materials; project scope and design changes; storm impacts; and the cost of capital. In addition, there can be no assurance that costs related to capital expenditures will be fully recovered.

Sources of Capital

Alabama Power plans to obtain the funds required for construction and other purposes from sources similar to those utilized in the past. Alabama Power has primarily utilized funds from operating cash flows, short-term debt, security issuances, and equity contributions from Southern Company. However, the amount, type, and timing of any future financings, if needed, will depend upon regulatory approval, prevailing market conditions, and other factors. See MANAGEMENT'S DISCUSSION AND ANALYSIS' FINANCIAL CONDITION AND LIQUIDITY' Sources of Capital of Alabama Power in Item 7 of the Form 10-K for additional information.

Alabama Power's current liabilities sometimes exceed current assets because of Alabama Power's debt due within one year and the periodic use of short-term debt as a funding source primarily to meet scheduled maturities of long-term debt, as well as cash needs, which can fluctuate significantly due to the seasonality of the business.

At March 31, 2012, Alabama Power had approximately \$355 million of cash and cash equivalents. Committed credit arrangements with banks at March 31, 2012 were as follows:

Expires					Executable Term Loans		Due Within One	
							Year^(a)	
2014								
2012	2013	and Beyond	Total	Unused	One Year	Two Year	Term Out	No Term Out
<i>(in millions)</i>					<i>(in millions)</i>		<i>(in millions)</i>	
\$121	\$35	\$1,150	\$1,306	\$1,306	\$51	\$	\$51	\$71

(a) Reflects facilities expiring on or before March 31, 2013.

See Note 6 to the financial statements of Alabama Power under 'Bank Credit Arrangements' in Item 8 of the Form 10-K and Note (E) to the Condensed Financial Statements under 'Bank Credit Arrangements' herein for additional information.

Most of these arrangements contain covenants that limit debt levels and typically contain cross default provisions that are restricted only to the indebtedness of Alabama Power. Alabama Power is currently in compliance with all such covenants. Alabama Power expects to renew its credit arrangements, as needed, prior to expiration. These credit arrangements provide liquidity support to Alabama Power's commercial paper borrowings and variable rate pollution control revenue bonds. The amount of variable rate pollution control revenue bonds outstanding requiring liquidity support as of March 31, 2012 was approximately \$793 million.

Edgar Filing: ALABAMA POWER CO - Form 10-Q

Alabama Power may meet short-term cash needs through its commercial paper program. Alabama Power may also meet short-term cash needs through a Southern Company subsidiary organized to issue and sell commercial paper at the request and for the benefit of Alabama Power and the other traditional operating companies. Proceeds from such issuances for the benefit of Alabama Power are loaned directly to Alabama Power. The obligations of each traditional operating company under these arrangements are several and there is no cross affiliate credit support.

Alabama Power had no commercial paper or short-term debt outstanding during the three-months ended March 31, 2012.

Table of Contents

ALABAMA POWER COMPANY

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Management believes that the need for working capital can be adequately met by utilizing commercial paper programs, lines of credit, and cash.

Credit Rating Risk

Alabama Power does not have any credit arrangements that would require material changes in payment schedules or terminations as a result of a credit rating downgrade. There are certain contracts that could require collateral, but not accelerated payment, in the event of a credit rating change to below BBB- and/or Baa3. These contracts are primarily for physical electricity purchases, fuel purchases, fuel transportation and storage, and energy price risk management. At March 31, 2012, the maximum potential collateral requirements under these contracts at a rating below BBB- and/or Baa3 were approximately \$310 million. Included in these amounts are certain agreements that could require collateral in the event that one or more Power Pool participant has a credit rating change to below investment grade. Generally, collateral may be provided by a Southern Company guaranty, letter of credit, or cash. Additionally, any credit rating downgrade could impact Alabama Power's ability to access capital markets, particularly the short-term debt market.

Market Price Risk

Alabama Power's market risk exposure relative to interest rate changes for the first quarter 2012 has not changed materially compared to the December 31, 2011 reporting period. Since a significant portion of outstanding indebtedness remains at fixed rates, Alabama Power is not aware of any facts or circumstances that would significantly affect exposures on existing indebtedness in the near term. However, the impact on future financing costs cannot now be determined.

Due to cost-based rate regulation and other various cost recovery mechanisms, Alabama Power continues to have limited exposure to market volatility in interest rates, commodity fuel prices, and prices of electricity. To mitigate residual risks relative to movements in electricity prices, Alabama Power enters into physical fixed-price contracts or heat-rate contracts for the purchase and sale of electricity through the wholesale electricity market and, to a lesser extent, into financial hedge contracts for natural gas purchases. Alabama Power continues to manage a retail fuel-hedging program implemented per the guidelines of the Alabama PSC. As such, Alabama Power had no material change in market risk exposure for the first quarter 2012 when compared with the December 31, 2011 reporting period.

Table of Contents**ALABAMA POWER COMPANY****MANAGEMENT'S DISCUSSION AND ANALYSIS OF****FINANCIAL CONDITION AND RESULTS OF OPERATIONS**

The changes in fair value of energy-related derivative contracts, substantially all of which are composed of regulatory hedges, for the three months ended March 31, 2012 were as follows:

	First Quarter
	2012
	Changes
	Fair Value (in millions)
Contracts outstanding at the beginning of the period, assets (liabilities), net	\$(48)
Contracts realized or settled	13
Current period changes ^(a)	(18)
Contracts outstanding at the end of the period, assets (liabilities), net	\$(53)

(a) Current period changes also include the changes in fair value of new contracts entered into during the period, if any. The change in the fair value positions of the energy-related derivative contracts for the three months ended March 31, 2012 was a decrease of \$5 million, of which \$3 million related to natural gas swaps and \$2 million related to natural gas options. The change is attributable to both the volume of mmBtu and the price of natural gas. At March 31, 2012, Alabama Power had a net hedge volume of 37 million mmBtu, which consisted of 27 million mmBtu of swaps and 10 million mmBtu of options. The weighted average swap contract cost was approximately \$1.72 per mmBtu above market prices. At December 31, 2011, Alabama Power had a net hedge volume of 39 million mmBtu, which consisted of 30 million mmBtu of swaps and 9 million mmBtu of options. The weighted average swap contract cost was approximately \$1.45 per mmBtu above market prices. The change in option premiums is primarily attributable to the volatility of the market and the underlying change in the natural gas price. All of the natural gas hedge gains and losses are recovered through Alabama Power's fuel cost recovery clause.

Regulatory hedges relate to Alabama Power's fuel-hedging program where gains and losses are initially recorded as regulatory liabilities and assets, respectively, and then are included in fuel expense as they are recovered through Alabama Power's fuel cost recovery clause.

Unrealized pre-tax gains and losses recognized in income for the three months ended March 31, 2012 and 2011 for energy-related derivative contracts that are not hedges were not material.

Alabama Power uses over-the-counter contracts that are not exchange traded but are fair valued using prices which are market observable, and thus fall into Level 2. See Note (C) to the Condensed Financial Statements herein for further discussion on fair value measurements. The maturities of the energy-related derivative contracts and the level of the fair value hierarchy in which they fall at March 31, 2012 were as follows:

March 31, 2012

Fair Value Measurements

	Total	Maturity		
	Fair Value	Year 1	Years 2&3	Years 4&5
		<i>(in millions)</i>		
Level 1	\$	\$	\$	\$
Level 2	(53)	(42)	(11)	
Level 3				
Fair value of contracts outstanding at end of period	\$(53)	\$(42)	\$(11)	\$

The Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) enacted in July 2010 could impact the use of over-the-counter derivatives by Alabama Power. Regulations to implement the Dodd-Frank Act could impose additional requirements on the use of over-the-counter derivatives, such as margin and reporting requirements, which could affect both the use and cost of over-the-counter derivatives. The impact, if any, cannot be determined until all relevant regulations are finalized.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

For additional information, see MANAGEMENT'S DISCUSSION AND ANALYSIS FINANCIAL CONDITION AND LIQUIDITY Market Price Risk of Alabama Power in Item 7 and Note 1 under Financial Instruments and Note 11 to the financial statements of Alabama Power in Item 8 of the Form 10-K and Note (H) to the Condensed Financial Statements herein.

Financing Activities

In January 2012, Alabama Power issued \$250 million aggregate principal amount of Series 2012A 4.10% Senior Notes due January 15, 2042. The proceeds were used for general corporate purposes, including Alabama Power's continuous construction program. Alabama Power settled \$100 million of interest rate swaps related to this issuance at a loss of \$1 million. The loss is being amortized to interest expense, in earnings, over 10 years.

In March 2012, Alabama Power redeemed approximately \$1 million aggregate principal amount of The Industrial Development Board of the Town of West Jefferson Solid Waste Disposal Revenue Bonds (Alabama Power Company Miller Plant Project), Series 2008.

Subsequent to March 31, 2012, Alabama Power redeemed \$250 million aggregate principal amount of its Series 2007B 5.875% Senior Notes due April 1, 2047.

In addition to any financings that may be necessary to meet capital requirements and contractual obligations, Alabama Power plans to continue, when economically feasible, a program to retire higher-cost securities and replace these obligations with lower-cost capital if market conditions permit.

Table of Contents

GEORGIA POWER COMPANY

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

FIRST QUARTER 2012 vs. FIRST QUARTER 2011

OVERVIEW

Georgia Power operates as a vertically integrated utility providing electricity to retail customers within its traditional service territory located within the State of Georgia and to wholesale customers in the Southeast. Many factors affect the opportunities, challenges, and risks of Georgia Power's business of selling electricity. These factors include the ability to maintain a constructive regulatory environment, to maintain and grow energy sales given economic conditions, and to effectively manage and secure timely recovery of costs. These costs include those related to projected long-term demand growth, increasingly stringent environmental standards, and fuel prices. In addition, Georgia Power is currently constructing two new nuclear units and one new combined cycle generating unit. Appropriately balancing required costs and capital expenditures with customer prices will continue to challenge Georgia Power for the foreseeable future.

Georgia Power continues to focus on several key performance indicators. These indicators include customer satisfaction, plant availability, system reliability, and net income after dividends on preferred and preference stock. For additional information on these indicators, see MANAGEMENT'S DISCUSSION AND ANALYSIS OVERVIEW Key Performance Indicators of Georgia Power in Item 7 of the Form 10-K.

RESULTS OF OPERATIONS

Net Income

First Quarter 2012 vs. First Quarter 2011

<i>(change in millions)</i>	<i>(% change)</i>
\$(39)	(18.9)

Georgia Power's net income after dividends on preferred and preference stock for the first quarter 2012 was \$167 million compared to \$206 million for the corresponding period in 2011. The decrease was primarily due to a decrease in operating revenues as a result of milder weather, higher depreciation and operations and maintenance expense, and lower AFUDC, partially offset by an increase related to retail revenue rate effects and lower income taxes in the first quarter 2012.

Retail Revenues

First Quarter 2012 vs. First Quarter 2011

<i>(change in millions)</i>	<i>(% change)</i>
\$(221)	(12.2)

In the first quarter 2012, retail revenues were \$1.59 billion compared to \$1.82 billion for the corresponding period in 2011.

Table of Contents**GEORGIA POWER COMPANY**

MANAGEMENT'S DISCUSSION AND ANALYSIS OF
FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Details of the change to retail revenues were as follows:

	First Quarter	
	2012	
	<i>(in millions)</i>	<i>(% change)</i>
Retail – prior year	\$ 1,815	
Estimated change in		
Rates and pricing	22	1.2
Sales growth (decline)	(7)	(0.4)
Weather	(50)	(2.8)
Fuel cost recovery	(186)	(10.2)
Retail – current year	\$ 1,594	(12.2)%

Revenues associated with changes in rates and pricing increased in the first quarter 2012 when compared to the corresponding period in 2011 due to the rate pricing effect of decreased customer usage and the NCCR and demand-side management tariff increases effective January 1, 2012, as approved by the Georgia PSC, partially offset by lower contributions from market-driven rates from commercial and industrial customers.

Revenues attributable to changes in sales decreased in the first quarter 2012 when compared to the corresponding period in 2011.

Weather-adjusted commercial and industrial KWH sales decreased 2.4% and 0.2%, respectively, in the first quarter 2012 when compared to the corresponding period in 2011, while weather-adjusted residential KWH sales remained flat. The economy continues to impact commercial sales.

Revenues resulting from changes in weather decreased in the first quarter 2012 when compared to the corresponding period in 2011 due to mild weather in the first quarter 2012 and cold weather in January 2011.

Fuel revenues and costs are allocated between retail and wholesale jurisdictions. Retail fuel cost recovery revenues decreased by \$186 million in the first quarter of 2012 when compared to the corresponding period in 2011 due to decreased KWH energy sales and lower fuel costs. See "Fuel and Purchased Power Expenses" herein for additional information.

Electric rates include provisions to adjust billings for fluctuations in fuel costs, including the energy component of purchased power costs. Under these fuel cost recovery provisions, fuel revenues generally equal fuel expenses, including the fuel component of purchased power costs, and do not affect net income.

Wholesale Revenues – Non-Affiliates

First Quarter 2012 vs. First Quarter 2011

(change in millions)
\$(17)

(% change)
(20.5)

Wholesale revenues from sales to non-affiliates consist of PPAs and short-term opportunity sales. Wholesale revenues from PPAs have both capacity and energy components. Capacity revenues reflect the recovery of fixed costs and a return on investment. Wholesale revenues from sales to non-affiliates will vary depending on fuel prices, the market prices of wholesale energy compared to the cost of Georgia Power's and the Southern Company system's generation, demand for energy within the Southern Company system's service territory, and the availability of the Southern Company system's generation. Increases and decreases in energy revenues that are driven by fuel prices are accompanied by an increase or decrease in fuel costs and do not have a significant impact on net income. Short-term opportunity sales are made at market-based rates that generally provide a margin above Georgia Power's variable cost of energy.

Table of Contents**GEORGIA POWER COMPANY**

MANAGEMENT'S DISCUSSION AND ANALYSIS OF
FINANCIAL CONDITION AND RESULTS OF OPERATIONS

In the first quarter 2012, wholesale revenues from non-affiliates were \$66 million compared to \$83 million in the corresponding period in 2011, primarily due to a \$20 million decrease in energy revenues, partially offset by a \$3 million increase in capacity revenues. The decrease in the first quarter 2012 was primarily due to a 41.3% decrease in KWH sales due to lower demand resulting from mild weather in the first quarter 2012 and cold weather in January 2011.

Wholesale Revenues – Affiliates

First Quarter 2012 vs. First Quarter 2011

(change in millions)
\$(8)

(% change)
(72.7)

Wholesale revenues from sales to affiliated companies within the Southern Company system will vary depending on demand and the availability and cost of generating resources at each company. These affiliate sales are made in accordance with the IIC, as approved by the FERC. These transactions do not have a significant impact on earnings since the energy is generally sold at marginal cost.

In the first quarter 2012, wholesale revenues from affiliates were \$3 million compared to \$11 million in the corresponding period in 2011. The decrease was primarily due to a 59.5% decrease in KWH sales due to lower demand resulting from milder weather and the availability of market energy at a lower cost than Georgia Power-owned generation.

Fuel and Purchased Power Expenses

First Quarter 2012 vs. First Quarter 2011

	(change in millions)	(% change)
Fuel	\$ (237)	(35.0)
Purchased power – non-affiliates	19	25.7
Purchased power – affiliates	(4)	(2.5)
Total fuel and purchased power expenses	\$ (222)	

In the first quarter 2012, total fuel and purchased power expenses were \$692 million compared to \$914 million in the corresponding period in 2011. The decrease was primarily due to the lower cost of natural gas used for generation and lower demand related to mild weather in the first quarter 2012 compared to cold weather in January 2011.

Fuel and purchased power energy transactions do not have a significant impact on earnings since energy expenses are generally offset by energy revenues through Georgia Power's fuel cost recovery mechanism. See FUTURE EARNINGS POTENTIAL – PSC Matters – Fuel Cost Recovery herein for additional information.

Table of Contents**GEORGIA POWER COMPANY**

MANAGEMENT'S DISCUSSION AND ANALYSIS OF
FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Details of Georgia Power's generation and purchased power were as follows:

	First Quarter 2012	First Quarter 2011
Total generation (<i>billions of KWHs</i>)	13	16
Total purchased power (<i>billions of KWHs</i>)	8	6
Sources of generation (<i>percent</i>)		
Coal	42	62
Nuclear	30	23
Gas	26	12
Hydro	2	3
Cost of fuel, generated (<i>cents per net KWH</i>)		
Coal	4.67	4.74
Nuclear	0.86	0.68
Gas	3.16	4.37
Average cost of fuel, generated (<i>cents per net KWH</i>)	3.10	3.73
Average cost of purchased power (<i>cents per net KWH</i>)*	3.86	5.57

* Average cost of purchased power includes fuel purchased by Georgia Power for tolling agreements where power is generated by the provider.

Fuel

In the first quarter 2012, fuel expense was \$440 million compared to \$677 million in the corresponding period in 2011. The decrease was due to a 22.1% decrease of KWHs generated as a result of lower KWH demand and a 16.9% decrease in the average cost of fuel per KWH generated primarily due to lower natural gas prices.

Purchased Power - Non-Affiliates

In the first quarter 2012, purchased power expense from non-affiliates was \$93 million compared to \$74 million in the corresponding period in 2011. The increase was due to a 139.8% increase in KWHs purchased as the market cost of available energy was lower than the additional Georgia Power-owned generation available, partially offset by a decrease of 47.9% in the average cost per KWH purchased.

Energy purchases from non-affiliates will vary depending on the market prices of wholesale energy as compared to the cost of the Southern Company system's generation, demand for energy within the Southern Company system's service territory, and the availability of the Southern Company system's generation.

Other Operations and Maintenance Expenses

Edgar Filing: ALABAMA POWER CO - Form 10-Q

First Quarter 2012 vs. First Quarter 2011

(change in millions)
\$12

(% change)
2.8

In the first quarter 2012, other operations and maintenance expenses were \$434 million compared to \$422 million in the corresponding period in 2011. The increase was primarily due to a \$10 million increase in employee pension expense, a \$5 million increase in customer assistance expense, and a \$2 million increase in nuclear property insurance, partially offset by an \$8 million decrease in power generation expense due to outage timing and scope of outage work performed and a decrease in KWH generated as a result of lower demand due to milder weather in the first quarter 2012.

Table of Contents**GEORGIA POWER COMPANY****MANAGEMENT'S DISCUSSION AND ANALYSIS OF
FINANCIAL CONDITION AND RESULTS OF OPERATIONS*****Depreciation and Amortization***

First Quarter 2012 vs. First Quarter 2011

(change in millions)
\$15*(% change)*
8.7

In the first quarter 2012, depreciation and amortization was \$188 million compared to \$173 million in the corresponding period in 2011. The increase was primarily due to a \$12 million increase in depreciation on additional plant in service related to new generation at Plant McDonough Unit 4 that went into service in December 2011, as well as additional transmission, distribution, and environmental projects.

Allowance for Equity Funds Used During Construction

First Quarter 2012 vs. First Quarter 2011

(change in millions)
\$(12)*(% change)*
(48.0)

In the first quarter 2012, AFUDC equity was \$13 million compared to \$25 million in the corresponding period in 2011. The decrease was due to the completion of Plant McDonough Unit 4 in December 2011.

Interest Expense, Net of Amounts Capitalized

First Quarter 2012 vs. First Quarter 2011

(change in millions)
\$(5)*(% change)*
(5.2)

In the first quarter 2012, interest expense, net of amounts capitalized was \$91 million compared to \$96 million for the corresponding period in 2011. The decrease for the first quarter 2012 when compared to the corresponding period in 2011 was primarily due to lower interest expense on existing variable rate pollution control revenue bonds.

Income Taxes

First Quarter 2012 vs. First Quarter 2011

*(change in millions)**(% change)*

Edgar Filing: ALABAMA POWER CO - Form 10-Q

\$(19)

(17.1)

In the first quarter 2012, income taxes were \$92 million compared to \$111 million in the corresponding period in 2011 due to lower pre-tax earnings.

FUTURE EARNINGS POTENTIAL

The results of operations discussed above are not necessarily indicative of Georgia Power's future earnings potential. The level of Georgia Power's future earnings depends on numerous factors that affect the opportunities, challenges, and risks of Georgia Power's business of selling electricity. These factors include Georgia Power's ability to maintain a constructive regulatory environment that continues to allow for the timely recovery of prudently incurred costs during a time of increasing costs. Future earnings in the near term will depend, in part, upon maintaining energy sales which is subject to a number of factors. These factors include weather, competition, new energy contracts with neighboring utilities, energy conservation practiced by customers, the price of electricity, the price elasticity of demand, and the rate of economic growth or decline in Georgia Power's service territory. Changes in economic conditions impact sales for Georgia Power and the pace of the economic recovery remains uncertain. The timing and extent of the economic recovery will impact growth and may impact future earnings. For additional information relating to these issues, see RISK FACTORS in Item 1A and MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL of Georgia Power in Item 7 of the Form 10-K.

Table of Contents

GEORGIA POWER COMPANY

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Environmental Matters

Compliance costs related to federal and state environmental statutes and regulations could affect earnings if such costs cannot continue to be fully recovered in rates on a timely basis. Environmental compliance spending over the next several years may differ materially from the amounts estimated. The timing, specific requirements, and estimated costs could change as environmental statutes and regulations are adopted or modified. Further, higher costs that are recovered through regulated rates could contribute to reduced demand for electricity, which could negatively affect results of operations, cash flows, and financial condition. See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - Environmental Matters of Georgia Power in Item 7 and Note 3 to the financial statements of Georgia Power under Environmental Matters in Item 8 of the Form 10-K for additional information.

New Source Review Actions

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - Environmental Matters - New Source Review Actions of Georgia Power in Item 7 and Note 3 to the financial statements of Georgia Power under Environmental Matters - New Source Review Actions in Item 8 of the Form 10-K for additional information. On February 23, 2012, the EPA filed a motion in the U.S. District Court for the Northern District of Alabama seeking vacatur of the judgment and recusal of the judge in the case involving Alabama Power. At the same time, the EPA asked the U.S. Court of Appeals for the Eleventh Circuit to stay its appeal of the judgment in favor of Alabama Power. Alabama Power filed oppositions to the EPA's motion and its request for a stay. On March 29, 2012, the U.S. Court of Appeals for the Eleventh Circuit denied the EPA's request to stay its appeal. The U.S. District Court for the Northern District of Alabama has not ruled on the EPA's motion seeking vacatur of the judgment. The ultimate outcome of this matter cannot be determined at this time.

Climate Change Litigation

Hurricane Katrina Case

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - Environmental Matters - Climate Change Litigation - Hurricane Katrina Case of Georgia Power in Item 7 and Note 3 to the financial statements of Georgia Power under Environmental Matters - Climate Change Litigation - Hurricane Katrina Case in Item 8 of the Form 10-K for additional information. On March 20, 2012, the U.S. District Court for the Southern District of Mississippi dismissed the amended class action complaint filed on May 27, 2011 by the plaintiffs. On April 16, 2012, the plaintiffs appealed the case to the U.S. Court of Appeals for the Fifth Circuit. The ultimate outcome of this matter cannot be determined at this time.

Environmental Statutes and Regulations

General

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - Environmental Matters - Environmental Statutes and Regulations - General of Georgia Power in Item 7 of the Form 10-K for information regarding Georgia Power's estimated base level capital expenditures to comply with existing statutes and regulations for 2012 through 2014, as well as Georgia Power's preliminary estimates for potential incremental environmental compliance investments associated with complying with the EPA's final Mercury and Air Toxics Standards (MATS) rule (formerly referred to as the Utility Maximum Achievable Control Technology rule) and the EPA's proposed water and coal combustion byproducts rules. Georgia Power is continuing to develop its compliance strategy and to assess the potential costs of complying with the MATS rule and the EPA's proposed water and coal combustion byproducts rules.

Table of Contents

GEORGIA POWER COMPANY

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Georgia Power's compliance strategy, including potential unit retirement and replacement decisions, and future environmental capital expenditures are dependent on a final assessment of the MATS rule and will be affected by the final requirements of new or revised environmental regulations that are promulgated, including any proposed environmental regulations; the outcome of any legal challenges to the environmental rules; the cost, availability, and existing inventory of emissions allowances; and Georgia Power's fuel mix. These costs may arise from existing unit retirements, installation of additional environmental controls, upgrades to the transmission system, the addition of new generating resources, and changing fuel sources for certain existing units. Georgia Power's preliminary analysis further indicates that the short timeframe for compliance with the MATS rule could significantly affect electric system reliability and cause an increase in costs of materials and services. The ultimate outcome of these matters cannot be determined at this time.

As part of Southern Electric Generating Company's (SEGCO) environmental compliance strategy, the Board of Directors of SEGCO approved adding natural gas as the primary fuel source in 2015 for its 1,000 MWs of generating capacity and the construction of the necessary natural gas pipeline. SEGCO is jointly owned by Georgia Power and Alabama Power. The capacity of SEGCO's units is sold to Georgia Power and Alabama Power through a PPA. See Note 4 to the financial statements of Georgia Power in Item 8 of the Form 10-K for additional information. The impact of SEGCO's ultimate compliance strategy on such PPA costs cannot be determined at this time; however, if such costs cannot continue to be recovered through retail rates, they could have a material impact on Georgia Power's financial statements.

Air Quality

See MANAGEMENT'S DISCUSSION AND ANALYSIS—FUTURE EARNINGS POTENTIAL—Environmental Matters—Environmental Statutes and Regulations—Air Quality of Georgia Power in Item 7 of the Form 10-K for additional information on the eight-hour ozone air quality standards and the MATS rule.

On May 1, 2012, the EPA released its final determination of nonattainment areas based on the 2008 eight-hour ozone air quality standards. The only area within Georgia Power's service territory designated as a nonattainment area was a 15-county area within metropolitan Atlanta.

Numerous petitions for administrative reconsideration of the MATS rule, including a petition by Southern Company and its subsidiaries, including Georgia Power, have been filed with the EPA. Challenges to the final rule have also been filed in the U.S. District Court of Appeals for the District of Columbia by numerous states, environmental organizations, industry groups, and others. The impact of the MATS rule will depend on the outcome of these and any other legal challenges and, therefore, cannot be determined at this time.

Coal Combustion Byproducts

See MANAGEMENT'S DISCUSSION AND ANALYSIS—FUTURE EARNINGS POTENTIAL—Environmental Matters—Environmental Statutes and Regulations—Coal Combustion Byproducts of Georgia Power in Item 7 of the Form 10-K for additional information. On April 5, 2012, 10 environmental groups filed a lawsuit in the U.S. District Court for the District of Columbia seeking to require the EPA to complete its rulemaking process and issue final regulations pertaining to the regulation of coal combustion byproducts as soon as possible. Other parties are expected to file similar challenges. The ultimate outcome of this matter cannot be determined at this time.

Global Climate Issues

See MANAGEMENT'S DISCUSSION AND ANALYSIS—FUTURE EARNINGS POTENTIAL—Environmental Matters—Global Climate Issues of Georgia Power in Item 7 of the Form 10-K for additional information. On April 13, 2012, the EPA published proposed regulations to establish standards of performance for greenhouse gas emissions from new fossil fuel steam electric generating units. As proposed, the standards would not apply to existing units. The EPA has delayed its plans to propose greenhouse gas emissions performance standards for modified sources and emissions guidelines for existing sources. The impact of this rulemaking will depend on the scope and specific requirements of the final rule and the outcome of any legal challenges and, therefore, cannot be determined at this time.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

PSC Matters

Fuel Cost Recovery

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL PSC Matters Fuel Cost Recovery of Georgia Power in Item 7 and Note 3 to the financial statements of Georgia Power under Retail Regulatory Matters Fuel Cost Recovery in Item 8 of the Form 10-K for additional information. As of March 31, 2012, Georgia Power had a total over recovered fuel cost balance of approximately \$22 million compared to an under recovered balance of \$137 million at December 31, 2011. The over recovered fuel costs at March 31, 2012 are included in other deferred credits and liabilities on Georgia Power's Condensed Balance Sheet herein. The under recovered fuel costs at December 31, 2011 are included in current assets on Georgia Power's Condensed Balance Sheet herein. Fuel cost recovery revenues as recorded on the financial statements are adjusted for differences in actual recoverable fuel costs and amounts billed in current regulated rates. Accordingly, any changes in the billing factor will not have a significant effect on Georgia Power's revenues or net income, but will affect cash flow.

On March 30, 2012, Georgia Power filed a request with the Georgia PSC to decrease fuel rates by 19%, which is expected to reduce annual billings by \$567 million. The decrease in fuel costs is driven primarily by lower natural gas prices as a result of increased natural gas supplies. The Georgia PSC is scheduled to vote on this matter on June 21, 2012. As proposed, the rate decrease would become effective July 1, 2012; however, Georgia Power is currently working with the Georgia PSC to potentially implement the proposed decrease effective June 1, 2012. The ultimate outcome of this matter cannot be determined at this time.

2011 Integrated Resource Plan Update

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL Environmental Matters Environmental Statutes and Regulations Air Quality, Water Quality, and Coal Combustion Byproducts of Georgia Power in Item 7 and Note 3 to the financial statements of Georgia Power under Retail Regulatory Matters Rate Plans and 2011 Integrated Resource Plan Update in Item 8 of the Form 10-K for additional information regarding proposed and final EPA rules and regulations, including the MATS rule for coal- and oil-fired electric utility steam generating units, revisions to effluent guidelines for steam electric power plants, and additional regulation of coal combustion byproducts; the State of Georgia's Multi-Pollutant Rule; Georgia Power's analysis of the potential costs and benefits of installing the required controls on its fossil generating units in light of these regulations; the 2010 ARP; and the 2011 IRP Update.

On March 20, 2012, the Georgia PSC approved Georgia Power's request to decertify and retire two coal-fired generation units at Plant Branch as of October 31, 2013 and December 31, 2013 and an oil-fired unit at Plant Mitchell as of March 26, 2012, which was included in Georgia Power's 2011 IRP Update. The Georgia PSC also approved three PPAs totaling 998 MWs with Southern Power for capacity and energy that will commence in 2015 and end in 2030. The PPAs remain subject to FERC approval. The ultimate outcome of this matter cannot be determined at this time.

Income Tax Matters

Bonus Depreciation

In December 2010, the Tax Relief, Unemployment Insurance Reauthorization, and Job Creation Act of 2010 (Tax Relief Act) was signed into law. Major tax incentives in the Tax Relief Act include 100% bonus depreciation for property placed in service after September 8, 2010 and through 2011 (and for certain long-term construction projects to be placed in service in 2012) and 50% bonus depreciation for property placed in service in 2012 (and for certain long-term construction projects to be placed in service in 2013), which will have a positive impact on the future cash flows of Georgia Power through 2013. Consequently, Georgia Power's positive cash flow benefit is estimated to be between \$320 million and \$420 million in 2012.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Construction

Nuclear

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL Construction Nuclear of Georgia Power in Item 7 and Note 3 to the financial statements of Georgia Power under Construction Nuclear in Item 8 of the Form 10-K for additional information regarding the construction of Plant Vogtle Units 3 and 4.

On February 16, 2012, a group of petitioners who had intervened in the NRC's combined construction and operating licenses (COLs) proceedings for Plant Vogtle Units 3 and 4 filed a petition in the U.S. Court of Appeals for the District of Columbia Circuit seeking judicial review and a stay of the NRC's issuance of the COLs. In addition, on February 16, 2012, another group of petitioners filed a petition with the U.S. Court of Appeals for the District of Columbia Circuit seeking judicial review of the NRC's certification of the Westinghouse Design Certification Document, as amended (DCD). On April 3, 2012, the U.S. Court of Appeals for the District of Columbia Circuit granted a motion filed by these two groups of petitioners to consolidate their challenges. On April 18, 2012, another group of petitioners filed a motion to stay the effectiveness of the order issuing the COLs for Plant Vogtle Units 3 and 4 with the U.S. District Court for the District of Columbia. Georgia Power has filed a motion to intervene in these proceedings and intends to vigorously contest these petitions.

In 2009, the Georgia PSC voted to certify construction of Plant Vogtle Units 3 and 4. In addition, the Georgia PSC voted to approve inclusion of the related CWIP accounts in rate base. Also in 2009, the Governor of the State of Georgia signed into law the Georgia Nuclear Energy Financing Act that allows Georgia Power to recover financing costs for nuclear construction projects by including the related CWIP accounts in rate base during the construction period. With respect to Plant Vogtle Units 3 and 4, this legislation allows Georgia Power to recover projected financing costs of approximately \$1.7 billion during the construction period beginning in 2011, which reduces the projected in-service cost to approximately \$4.4 billion. The Georgia PSC has ordered Georgia Power to report against this total certified cost of approximately \$6.1 billion. In addition, in December 2010, the Georgia PSC approved Georgia Power's NCCR tariff. The NCCR tariff became effective January 1, 2011 and adjustments are filed with the Georgia PSC on November 1 of each year to become effective on January 1 of the following year. Georgia Power is collecting and amortizing to earnings approximately \$91 million of financing costs, capitalized in 2009 and 2010, over the five-year period ending December 31, 2015, in addition to the ongoing financing costs. At March 31, 2012, approximately \$68 million of these 2009 and 2010 costs remained in CWIP.

Georgia Power, Oglethorpe Power Corporation, the Municipal Electric Authority of Georgia, and the City of Dalton, Georgia, an incorporated municipality in the State of Georgia acting by and through its Board of Water, Light, and Sinking Fund Commissioners (collectively, Owners) and Westinghouse and Stone & Webster, Inc. (collectively, Consortium) have established both informal and formal dispute resolution procedures in accordance with the engineering, procurement, and construction agreement to design, engineer, procure, construct, and test two AP1000 nuclear units with electric generating capacity of approximately 1,100 MWs each and related facilities, structures, and improvements at Plant Vogtle entered into by the parties (Vogtle 3 and 4 Agreement) in order to resolve issues arising during the course of constructing a project of this magnitude. The Consortium and Georgia Power (on behalf of the Owners) have successfully initiated both formal and informal claims through these procedures, including ongoing claims, to resolve disputes and expect to resolve any existing and future disputes through these procedures as well.

Table of Contents

GEORGIA POWER COMPANY

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

During the course of construction activities, issues have arisen that may impact the project budget and schedule, including costs associated with design changes to the DCD, and costs associated with delays in the project schedule related to the timing of approval of the DCD and issuance of the COLs. The Owners and the Consortium have begun negotiations regarding these issues, including the assertion by the Consortium that the Owners are responsible for these costs under the terms of the Vogtle 3 and 4 Agreement. In preliminary discussions, the Consortium has provided its initial estimate of its proposed adjustment to the contract price. The Consortium's estimated adjustment attributable to Georgia Power (based on Georgia Power's ownership interest) is approximately \$400 million (in 2008 dollars) with respect to these issues, which include an initial estimate of costs for efforts to maintain the projected in-service dates of 2016 and 2017 for Plant Vogtle Units 3 and 4, respectively. Georgia Power has not agreed with the amount of these proposed adjustments or that the Owners have responsibility for any costs related to these issues. Georgia Power expects negotiations with the Consortium to continue over the next several months during which time the parties will attempt to reach a mutually acceptable compromise of their positions. If a compromise cannot be reached, formal dispute resolution, including litigation, may follow. Georgia Power intends to vigorously defend its positions. If these costs are imposed upon the Owners, Georgia Power would seek an amendment to the certified cost of Plant Vogtle Units 3 and 4, if necessary. Additional claims by the Consortium or Georgia Power (on behalf of the Owners) are expected to arise throughout the construction of Plant Vogtle Units 3 and 4.

In addition, there are processes in place to assure compliance with the design requirements specified in the DCD and the COLs, including rigorous inspection by Southern Nuclear and the NRC that occurs throughout construction. A recent routine NRC inspection identified that certain details of the rebar construction in the Plant Vogtle Unit 3 nuclear island were not consistent with the DCD. Georgia Power expects to receive official notice of these findings from the NRC. Georgia Power, on behalf of the Owners, is currently engaged in constructive discussions with the Consortium to identify appropriate corrective actions. Various inspection issues are expected as construction proceeds.

There are pending technical and procedural challenges to the construction and licensing of Plant Vogtle Units 3 and 4, including legal challenges to the NRC issuance of the COLs and certification of the DCD. Similar additional challenges at the state and federal level are expected as construction proceeds.

See RISK FACTORS of Georgia Power in Item 1A of the Form 10-K for a discussion of certain risks associated with the licensing, construction, and operation of nuclear generating units, including potential impacts that could result from a major incident at a nuclear facility anywhere in the world.

The ultimate outcome of these matters cannot be determined at this time.

Other Construction

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - Construction - Other Construction of Georgia Power in Item 7 and Note 3 to the financial statements of Georgia Power under Construction - Other Construction in Item 8 of the Form 10-K for additional information.

Georgia Power placed Plant McDonough Unit 5 into service on April 26, 2012. Plant McDonough Unit 6 is expected to be placed into service in November 2012. Plant McDonough Unit 1 was retired on February 29, 2012.

Table of Contents

GEORGIA POWER COMPANY

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Other Matters

Georgia Power is involved in various other matters being litigated and regulatory matters that could affect future earnings. In addition, Georgia Power is subject to certain claims and legal actions arising in the ordinary course of business. Georgia Power's business activities are subject to extensive governmental regulation related to public health and the environment, such as regulation of air emissions and water discharges. Litigation over environmental issues and claims of various types, including property damage, personal injury, common law nuisance, and citizen enforcement of environmental requirements such as air quality and water standards, has increased generally throughout the U.S. In particular, personal injury and other claims for damages caused by alleged exposure to hazardous materials, and common law nuisance claims for injunctive relief and property damage allegedly caused by greenhouse gas and other emissions, have become more frequent. The ultimate outcome of such pending or potential litigation against Georgia Power cannot be predicted at this time; however, for current proceedings not specifically reported herein or in Note 3 to the financial statements of Georgia Power in Item 8 of the Form 10-K, management does not anticipate that the ultimate liabilities, if any, arising from such current proceedings would have a material effect on Georgia Power's financial statements.

See the Notes to the Condensed Financial Statements herein for a discussion of various other contingencies, regulatory matters, and other matters being litigated which may affect future earnings potential.

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - Other Matters of Georgia Power in Item 7 of the Form 10-K for additional information regarding the earthquake and tsunami that struck Japan in March 2011. On March 12, 2012, the NRC issued three orders and a request for information based on the NRC task force report recommendations that included, among other items, additional mitigation strategies for beyond-design-basis events, enhanced spent fuel pool instrumentation capabilities, hardened vents for certain classes of containment structures, including the one in use at Plant Hatch, site specific evaluations for seismic and flooding hazards, and various plant evaluations to ensure adequate coping capabilities during station blackout and other conditions. The staff of the NRC expects to issue additional implementation guidance by August 2012. The final form and the resulting impact of any changes to safety requirements for nuclear reactors will be dependent on further review and action by the NRC and cannot be determined at this time. See RISK FACTORS of Georgia Power in Item 1A of the Form 10-K for a discussion of certain risks associated with the licensing, construction, and operation of nuclear generating units, including potential impacts that could result from a major incident at a nuclear facility anywhere in the world. The ultimate outcome of these events cannot be determined at this time.

ACCOUNTING POLICIES

Application of Critical Accounting Policies and Estimates

Georgia Power prepares its financial statements in accordance with GAAP. Significant accounting policies are described in Note 1 to the financial statements of Georgia Power in Item 8 of the Form 10-K. In the application of these policies, certain estimates are made that may have a material impact on Georgia Power's results of operations and related disclosures. Different assumptions and measurements could produce estimates that are significantly different from those recorded in the financial statements. See MANAGEMENT'S DISCUSSION AND ANALYSIS - ACCOUNTING POLICIES - Application of Critical Accounting Policies and Estimates of Georgia Power in Item 7 of the Form 10-K for a complete discussion of Georgia Power's critical accounting policies and estimates related to Electric Utility Regulation, Contingent Obligations, Unbilled Revenues, and Pension and Other Postretirement Benefits.

Table of Contents

GEORGIA POWER COMPANY

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

FINANCIAL CONDITION AND LIQUIDITY

Overview

See MANAGEMENT'S DISCUSSION AND ANALYSIS FINANCIAL CONDITION AND LIQUIDITY Overview of Georgia Power in Item 7 of the Form 10-K for additional information. Georgia Power's financial condition remained stable at March 31, 2012. Georgia Power intends to continue to monitor its access to short-term and long-term capital markets as well as its bank credit arrangements to meet future capital and liquidity needs. See Sources of Capital, Financing Activities, and Capital Requirements and Contractual Obligations herein for additional information.

Net cash provided from operating activities totaled \$312 million for the first three months of 2012 compared to \$350 million for the corresponding period in 2011. The \$38 million decrease is primarily due to lower retail operating revenues and higher fuel inventory additions in the first quarter 2012. Net cash used for investing activities totaled \$681 million primarily due to gross property additions to utility plant in the first three months of 2012. Net cash provided from financing activities totaled \$369 million for the first three months of 2012 compared to \$81 million for the corresponding period in 2011. The \$288 million increase is primarily due to increased debt issuances in the first quarter 2012.

Significant balance sheet changes for the first three months of 2012 include increases of \$288 million in total property, plant, and equipment and \$121 million in fossil fuel stock, as well as the elimination of \$137 million in under recovered fuel.

Capital Requirements and Contractual Obligations

See MANAGEMENT'S DISCUSSION AND ANALYSIS FINANCIAL CONDITION AND LIQUIDITY Capital Requirements and Contractual Obligations of Georgia Power in Item 7 of the Form 10-K for a description of Georgia Power's capital requirements for its construction program, scheduled maturities of long-term debt, as well as related interest, derivative obligations, preferred and preference stock dividends, leases, purchase commitments, trust funding requirements, and unrecognized tax benefits. Approximately \$855 million will be required through March 31, 2013 to fund maturities of long-term debt.

On March 20, 2012, the Georgia PSC approved three PPAs totaling 998 MWs with Southern Power for capacity and energy that will commence in 2015 and end in 2030. However, these PPAs remain subject to FERC approval. See FUTURE EARNINGS POTENTIAL PSC Matters 2011 Integrated Resource Plan Update herein for additional information. These PPAs will be accounted for as leases and are expected to result in additional obligations of approximately \$56 million in 2015, \$66 million in 2016, and a total of \$973 million thereafter. The ultimate outcome of this matter cannot be determined at this time.

The construction program is subject to periodic review and revision, and actual construction costs may vary from these estimates because of numerous factors. These factors include: changes in business conditions; changes in load projections; changes in environmental statutes and regulations; the outcome of any legal challenges to the environmental rules; changes in generating plants, including unit retirements and replacements and adding or changing fuel sources at existing units, to meet new regulatory requirements; changes in FERC rules and regulations; Georgia PSC approvals; changes in legislation; the cost and efficiency of construction labor, equipment, and materials; project scope and design changes; storm impacts; and the cost of capital. In addition, there can be no assurance that costs related to capital expenditures will be fully recovered.

Table of Contents**GEORGIA POWER COMPANY**

MANAGEMENT'S DISCUSSION AND ANALYSIS OF
FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Sources of Capital

Except as described below with respect to potential DOE loan guarantees, Georgia Power plans to obtain the funds required for construction and other purposes from sources similar to those used in the past, which were primarily from operating cash flows, short-term debt, security issuances, term loans, and equity contributions from Southern Company. However, the amount, type, and timing of any future financings, if needed, will depend upon regulatory approval, prevailing market conditions, and other factors. See MANAGEMENT'S DISCUSSION AND ANALYSIS FINANCIAL CONDITION AND LIQUIDITY Sources of Capital of Georgia Power in Item 7 of the Form 10-K for additional information.

In June 2010, Georgia Power reached an agreement with the DOE to accept terms for a conditional commitment for federal loan guarantees that would apply to future borrowings by Georgia Power related to the construction of Plant Vogtle Units 3 and 4. Any borrowings guaranteed by the DOE would be full recourse to Georgia Power and secured by a first priority lien on Georgia Power's 45.7% undivided ownership interest in Plant Vogtle Units 3 and 4. Total guaranteed borrowings would not exceed the lesser of 70% of eligible project costs, or approximately \$3.46 billion, and are expected to be funded by the Federal Financing Bank. Final approval and issuance of loan guarantees by the DOE are subject to negotiation of definitive agreements, completion of due diligence by the DOE, receipt of any necessary regulatory approvals, and satisfaction of other conditions. There can be no assurance that the DOE will issue loan guarantees for Georgia Power. See FUTURE EARNINGS POTENTIAL Construction Nuclear herein for more information on Plant Vogtle Units 3 and 4.

Georgia Power's current liabilities frequently exceed current assets because of the continued use of short-term debt as a funding source to meet scheduled maturities of long-term debt, as well as cash needs, which can fluctuate significantly due to the seasonality of the business.

At March 31, 2012, Georgia Power had approximately \$13 million of cash and cash equivalents. Committed credit arrangements with banks at March 31, 2012 were as follows:

Expires					Executable Term Loans		Due Within One	
							Year ^(a)	
2014								
and								
Beyond								
2012	2013		Total	Unused	One Year	Two Year	Term Out	No Term Out
(in millions)					(in millions)		(in millions)	
\$	\$	\$1,750	\$1,750	\$1,745	\$	\$	\$	\$

(a) Reflects facilities expiring on or before March 31, 2013.

See Note 6 to the financial statements of Georgia Power under Bank Credit Arrangements in Item 8 of the Form 10-K and Note (E) to the Condensed Financial Statements under Bank Credit Arrangements herein for additional information.

Most of these arrangements contain covenants that limit debt levels and typically contain cross default provisions that are restricted only to the indebtedness of Georgia Power. Georgia Power is currently in compliance with all such covenants. Georgia Power expects to renew its credit arrangements, as needed, prior to expiration. These credit arrangements provide liquidity support to Georgia Power's commercial paper borrowings and variable rate pollution control revenue bonds. The amount of variable rate pollution control revenue bonds outstanding requiring

liquidity support as of March 31, 2012 was approximately \$868 million.

Table of Contents**GEORGIA POWER COMPANY**

MANAGEMENT'S DISCUSSION AND ANALYSIS OF
FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Georgia Power may also meet short-term cash needs through a Southern Company subsidiary organized to issue and sell commercial paper at the request and for the benefit of Georgia Power and the other traditional operating companies. Proceeds from such issuances for the benefit of Georgia Power are loaned directly to Georgia Power. The obligations of each traditional operating company under these arrangements are several and there is no cross affiliate credit support.

Details of short-term borrowings, excluding \$2 million of notes payable related to other energy service contracts, were as follows:

	Short-term Debt at the End of the Period		Short-term Debt During the Period ^(a)		
	Amount Outstanding	Weighted Average Interest Rate	Average Outstanding	Weighted Average Interest Rate	Maximum Amount Outstanding
	<i>(in millions)</i>		<i>(in millions)</i>		<i>(in millions)</i>
March 31, 2012:					
Commercial paper	\$ 312	0.3%	\$ 229	0.2%	\$ 517
Short-term bank debt	300	1.1%	290	1.2%	300
Total	\$ 612	0.7%	\$ 519	0.8%	

(a) Average and maximum amounts are based upon daily balances during the period.

Management believes that the need for working capital can be adequately met by utilizing commercial paper programs, lines of credit, and cash.

Credit Rating Risk

Georgia Power does not have any credit arrangements that would require material changes in payment schedules or terminations as a result of a credit rating downgrade. There are certain contracts that could require collateral, but not accelerated payment, in the event of a credit rating change to BBB- and/or Baa3 or below. These contracts are for physical electricity purchases and sales, fuel purchases, fuel transportation and storage, energy price risk management, and construction of new generation. The maximum potential collateral requirements under these contracts at March 31, 2012 were as follows:

Credit Ratings	Maximum Potential Collateral Requirements
	<i>(in millions)</i>
At BBB- and/or Baa3	\$ 68
Below BBB- and/or Baa3	1,540

Edgar Filing: ALABAMA POWER CO - Form 10-Q

Included in these amounts are certain agreements that could require collateral in the event that one or more Power Pool participant has a credit rating change to below investment grade. Generally, collateral may be provided by a Southern Company guaranty, letter of credit, or cash. Additionally, any credit rating downgrade could impact Georgia Power's ability to access capital markets, particularly the short-term debt market.

Table of Contents**GEORGIA POWER COMPANY****MANAGEMENT'S DISCUSSION AND ANALYSIS OF****FINANCIAL CONDITION AND RESULTS OF OPERATIONS****Market Price Risk**

Georgia Power's market risk exposure relative to interest rate changes for the first quarter 2012 has not changed materially compared with the December 31, 2011 reporting period. Since a significant portion of outstanding indebtedness is at fixed rates, Georgia Power is not aware of any facts or circumstances that would significantly affect exposures on existing indebtedness in the near term. However, the impact on future financing costs cannot now be determined.

Due to cost-based rate regulation and other various cost recovery mechanisms, Georgia Power continues to have limited exposure to market volatility in interest rates, commodity fuel prices, and prices of electricity. To mitigate residual risks relative to movements in electricity prices, Georgia Power enters into physical fixed-price contracts or heat-rate contracts for the purchase and sale of electricity through the wholesale electricity market and, to a lesser extent, into financial hedge contracts for natural gas purchases. Georgia Power continues to manage a fuel-hedging program implemented per the guidelines of the Georgia PSC. As such, Georgia Power had no material change in market risk exposure for the first quarter 2012 relative to fuel and electricity prices when compared with the December 31, 2011 reporting period.

The changes in fair value of energy-related derivative contracts, substantially all of which are composed of regulatory hedges, for the three months ended March 31, 2012 were as follows:

	First Quarter
	2012
	Changes
	Fair Value (in millions)
Contracts outstanding at the beginning of the period, assets (liabilities), net	\$(82)
Contracts realized or settled	19
Current period changes ^(a)	(23)
Contracts outstanding at the end of the period, assets (liabilities), net	\$(86)

(a) Current period changes also include the changes in fair value of new contracts entered into during the period, if any. The change in the fair value positions of the energy-related derivative contracts for the three months ended March 31, 2012 was a decrease of \$4 million, of which \$8 million related to a decrease from natural gas options, partially offset by an increase of \$4 million from natural gas swaps. The change is attributable to both the volume of mmBtu and the price of natural gas. At March 31, 2012, Georgia Power had a net hedge volume of 85 million mmBtu, which consisted of 25 million mmBtu of swaps and 60 million mmBtu of options. The weighted average swap contract cost was approximately \$2.13 per mmBtu above market prices. At December 31, 2011, Georgia Power had a net hedge volume of 73 million mmBtu, which consisted of 29 million mmBtu of swaps and 44 million mmBtu of options. The weighted average swap contract cost was approximately \$1.65 per mmBtu above market prices. The change in option premiums is primarily attributable to the volatility of the market and the underlying change in the natural gas price. All natural gas hedge gains and losses are recovered through Georgia Power's fuel cost recovery mechanism.

Edgar Filing: ALABAMA POWER CO - Form 10-Q

Regulatory hedges relate to Georgia Power's fuel-hedging program where gains and losses are initially recorded as regulatory liabilities and assets, respectively, and then are included in fuel expense as they are recovered through Georgia Power's fuel cost recovery mechanism.

Unrealized pre-tax gains and losses recognized in income for the three months ended March 31, 2012 and 2011 for energy-related derivative contracts that are not hedges were not material.

Table of Contents**GEORGIA POWER COMPANY****MANAGEMENT'S DISCUSSION AND ANALYSIS OF****FINANCIAL CONDITION AND RESULTS OF OPERATIONS**

Georgia Power uses over-the-counter contracts that are not exchange traded but are fair valued using prices which are market observable, and thus fall into Level 2. See Note (C) to the Condensed Financial Statements herein for further discussion on fair value measurements. The maturities of the energy-related derivative contracts and the level of the fair value hierarchy in which they fall at March 31, 2012 were as follows:

March 31, 2012			
Fair Value Measurements			
	Total Fair Value	Maturity Year 1	Years 2&3
	<i>(in millions)</i>		
Level 1	\$	\$	\$
Level 2	(86)	(66)	(20)
Level 3			
Fair value of contracts outstanding at end of period	\$(86)	\$(66)	\$(20)

The Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) enacted in July 2010 could impact the use of over-the-counter derivatives by Georgia Power. Regulations to implement the Dodd-Frank Act could impose additional requirements on the use of over-the-counter derivatives, such as margin and reporting requirements, which could affect both the use and cost of over-the-counter derivatives. The impact, if any, cannot be determined until all relevant regulations are finalized.

For additional information, see MANAGEMENT'S DISCUSSION AND ANALYSIS FINANCIAL CONDITION AND LIQUIDITY Market Price Risk of Georgia Power in Item 7 and Note 1 under Financial Instruments and Note 11 to the financial statements of Georgia Power in Item 8 of the Form 10-K and Note (H) to the Condensed Financial Statements herein.

Financing Activities

In January 2012, Georgia Power entered into a six-month floating rate bank loan in an aggregate amount of \$100 million, bearing interest based on one-month LIBOR. The proceeds were used for general corporate purposes, including Georgia Power's continuous construction program.

In March 2012, Georgia Power issued \$750 million aggregate principal amount of Series 2012A 4.30% Senior Notes due March 15, 2042. The proceeds were used to repay a portion of Georgia Power's short-term debt, to repay two bank loans, each in an aggregate principal amount of \$125 million, and for general corporate purposes, including Georgia Power's continuous construction program.

In addition to any financings that may be necessary to meet capital requirements and contractual obligations, Georgia Power plans to continue, when economically feasible, a program to retire higher-cost securities and replace these obligations with lower-cost capital if market conditions permit.

Edgar Filing: ALABAMA POWER CO - Form 10-Q

The accompanying notes as they relate to Gulf Power are an integral part of these condensed financial statements.

Table of Contents**GULF POWER COMPANY****MANAGEMENT'S DISCUSSION AND ANALYSIS OF****FINANCIAL CONDITION AND RESULTS OF OPERATIONS****FIRST QUARTER 2012 vs. FIRST QUARTER 2011****OVERVIEW**

Gulf Power operates as a vertically integrated utility providing electricity to retail customers within its traditional service territory located in northwest Florida and to wholesale customers in the Southeast. Many factors affect the opportunities, challenges, and risks of Gulf Power's business of selling electricity. These factors include the ability to maintain a constructive regulatory environment, to maintain and grow energy sales given economic conditions, and to effectively manage and secure timely recovery of costs. These costs include those related to projected long-term demand growth, increasingly stringent environmental standards, fuel prices, and storm restoration following major storms. Appropriately balancing required costs and capital expenditures with customer prices will continue to challenge Gulf Power for the foreseeable future.

On March 12, 2012, the Florida PSC approved a permanent increase in retail base rates and charges of \$64 million effective April 11, 2012. The amount of the permanent increase includes the previously approved \$38.5 million interim retail rate increase implemented in September 2011. The Florida PSC's decision on the amount of the permanent increase also included a determination that none of the base rate revenues collected on an interim basis would be refunded. Gulf Power's authorized retail ROE is a range of 9.25% to 11.25% with new retail base rates set at the midpoint retail ROE of 10.25%. In addition, the Florida PSC also approved a step increase to Gulf Power's retail base rates and charges of \$4 million to be effective in January 2013. On April 18, 2012, Gulf Power filed a motion to reconsider one aspect of the decision dealing with property acquired as a potential site for a future generating plant. If the motion is granted, the previously approved rates would be increased by an additional \$2 million. The ultimate outcome of this matter cannot be determined at this time.

Gulf Power continues to focus on several key performance indicators. These indicators include customer satisfaction, plant availability, system reliability, and net income after dividends on preference stock. For additional information on these indicators, see MANAGEMENT'S DISCUSSION AND ANALYSIS OVERVIEW Key Performance Indicators of Gulf Power in Item 7 of the Form 10-K.

RESULTS OF OPERATIONS***Net Income*****First Quarter 2012 vs. First Quarter 2011**

(change in millions)
\$9.0

(% change)
76.8

Gulf Power's net income after dividends on preference stock for the first quarter 2012 was \$20.7 million compared to \$11.7 million for the corresponding period in 2011. The increase was primarily due to an increase related to interim retail rate revenues, higher wholesale capacity revenues from non-affiliates, and a decrease in other operations and maintenance expenses in 2012, partially offset by milder weather in the first quarter 2012 compared to the corresponding period in 2011.

Retail Revenues**First Quarter 2012 vs. First Quarter 2011**

(change in millions)

(% change)

Edgar Filing: ALABAMA POWER CO - Form 10-Q

\$(36.3)

(13.2)

In the first quarter 2012, retail revenues were \$238.5 million compared to \$274.8 million for the corresponding period in 2011.

Table of Contents**GULF POWER COMPANY**

MANAGEMENT'S DISCUSSION AND ANALYSIS OF
FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Details of the change to retail revenues were as follows:

	First Quarter	
	2012	
	<i>(in millions)</i>	<i>(% change)</i>
Retail – prior year	\$274.8	
Estimated change in		
Rates and pricing	12.5	4.5
Sales growth (decline)	1.3	0.5
Weather	(8.3)	(3.0)
Fuel and other cost recovery	(41.8)	(15.2)
Retail – current year	\$238.5	(13.2)%

See MANAGEMENT'S DISCUSSION AND ANALYSIS – FUTURE EARNINGS POTENTIAL – PSC Matters of Gulf Power in Item 7 and Note 1 to the financial statements of Gulf Power under Revenues and Note 3 to the financial statements of Gulf Power under Retail Regulatory Matters in Item 8 of the Form 10-K for additional information regarding Gulf Power's retail base rate case and cost recovery clauses, including Gulf Power's fuel cost recovery, purchased power capacity recovery, environmental cost recovery, and energy conservation cost recovery.

Revenues associated with changes in rates and pricing increased in the first quarter 2012 when compared to the corresponding period in 2011 primarily due to an increase related to interim retail rate revenues and revenues associated with higher recoverable costs under Gulf Power's energy conservation cost recovery clause, partially offset by revenues associated with lower recoverable costs under Gulf Power's environmental cost recovery clause.

Revenues attributable to changes in sales increased in the first quarter 2012 when compared to the corresponding period in 2011. KWH energy sales to industrial customers decreased 6.8% primarily due to increased customer co-generation associated with the lower cost of natural gas in 2012 and changes in customer production levels. Weather-adjusted KWH energy sales to commercial customers increased 3.3% due to higher use per customer. Weather-adjusted KWH energy sales to residential customers remained relatively flat.

Revenues attributable to changes in weather decreased in the first quarter 2012 when compared to the corresponding period for 2011 due to milder weather in the first quarter 2012 compared to the corresponding period in 2011.

Fuel and other cost recovery revenues decreased in the first quarter 2012 when compared to the corresponding period for 2011 primarily due to revenues associated with lower recoverable fuel cost for generation and purchased power energy costs in addition to fewer KWH energy sales. Fuel and other cost recovery provisions include fuel expenses, the energy component of purchased power costs, purchased power capacity costs, and the difference between projected and actual costs and revenues related to energy conservation and environmental compliance. See FUTURE EARNINGS POTENTIAL – PSC Matters – Cost Recovery Clauses – Fuel Cost Recovery herein for additional information.

Wholesale Revenues – Non-Affiliates

Edgar Filing: ALABAMA POWER CO - Form 10-Q

First Quarter 2012 vs. First Quarter 2011

(change in millions)
\$(3.9)

(% change)
(12.6)

Wholesale revenues from sales to non-affiliates will vary depending on fuel prices, the market prices of wholesale energy compared to the cost of Gulf Power's and the Southern Company system's generation, demand for energy within the Southern Company system's service territory, and availability of the Southern Company system's generation. Wholesale revenues from non-affiliates include unit power sales under long-term contracts to other utilities in Florida and Georgia.

Table of Contents**GULF POWER COMPANY**

MANAGEMENT'S DISCUSSION AND ANALYSIS OF
FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Wholesale revenues from these contracts have both capacity and energy components. Capacity revenues reflect the recovery of fixed costs and a return on investment under the contracts. Energy is generally sold at variable cost.

In the first quarter 2012, wholesale revenues from non-affiliates were \$27.1 million compared to \$31.0 million for the corresponding period in 2011. The decrease was primarily due to lower energy revenues related to a 58.4% decrease in KWH sales resulting primarily from less energy scheduled by unit power customers, partially offset by a 31.6% increase in capacity revenues related to increased capacity rates resulting from contract provisions. These contracts include change-in-law provisions that provide for recovery of the environmental costs related to the generating resource.

Wholesale Revenues - Affiliates

First Quarter 2012 vs. First Quarter 2011

<i>(change in millions)</i>	<i>(% change)</i>
\$32.3	779.4

Wholesale revenues from sales to affiliated companies within the Southern Company system will vary depending on demand and the availability and cost of generating resources at each company. These affiliate sales are made in accordance with the IIC, as approved by the FERC. These transactions do not have a significant impact on earnings since the fuel revenue related to energy sales and the cost of energy purchases are both included in the determination of recoverable fuel costs and are generally offset by revenues collected in Gulf Power's fuel cost recovery clause.

In the first quarter 2012, wholesale revenues from affiliates were \$36.4 million compared to \$4.1 million for the corresponding period in 2011. The increase was primarily due to higher energy revenues related to a 1,205% increase in KWH energy sales resulting from the availability of Gulf Power's lower priced natural gas resources to serve affiliate demand.

Fuel and Purchased Power Expenses

First Quarter 2012 vs. First Quarter 2011

	<i>(change in millions)</i>	<i>(% change)</i>
Fuel	\$(10.7)	(8.1)
Purchased power - non-affiliates	4.2	60.3
Purchased power - affiliates	(14.1)	(84.9)
Total fuel and purchased power expenses	\$(20.6)	

In the first quarter 2012, total fuel and purchased power expenses were \$134.8 million compared to \$155.4 million for the corresponding period in 2011. The net decrease in fuel and purchased power expenses was due to a \$65.5 million decrease in the average cost of generated and purchased power and a \$25.0 million decrease related to KWHs generated, partially offset by a \$69.9 million increase related to KWHs

purchased.

Fuel and purchased power transactions do not have a significant impact on earnings since energy and purchased power expenses are generally offset by energy and capacity revenues through Gulf Power's fuel cost and purchased power capacity recovery clauses. See FUTURE EARNINGS POTENTIAL, PSC Matters, Cost Recovery Clauses, Fuel Cost Recovery and Purchased Power Capacity Recovery herein for additional information.

Table of Contents

GULF POWER COMPANY
MANAGEMENT'S DISCUSSION AND ANALYSIS OF
FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Details of Gulf Power's generation and purchased power were as follows:

	First Quarter 2012	First Quarter 2011
Total generation (millions of KWHs)	2,341	2,801
Total purchased power (millions of KWHs)	1,750	448
Sources of generation (percent)		
Coal	53	67
Gas	47	33
Cost of fuel, generated (cents per net KWH)		
Coal	4.29	5.03
Gas	3.44	3.99
Average cost of fuel, generated (cents per net KWH)	3.89	4.69
Average cost of purchased power (cents per net KWH)*	2.50	5.37

* Average cost of purchased power includes fuel purchased by Gulf Power for tolling agreements where power is generated by the provider.
Fuel

In the first quarter 2012, fuel expense was \$121.1 million compared to \$131.8 million for the corresponding period in 2011. The decrease was primarily the result of a 13.8% decrease in the average cost of natural gas per KWH generated, a higher percentage of utilization of lower cost natural gas-fired sources, and a 16.5% decrease in KWHs generated as a result of lower demand. These decreases were partially offset by a 290.6% increase in KWHs purchased.

In the first quarter 2012, the decrease in the average cost of fuel was a result of decreases in the average costs of natural gas and coal per KWH generated and a higher percentage of utilization of Gulf Power's lower cost natural gas-fired generation sources.

Purchased Power – Non-Affiliates

In the first quarter 2012, purchased power expense from non-affiliates was \$11.2 million compared to \$7.0 million for the corresponding period in 2011. The increase was primarily due to a \$4.2 million increase in energy costs resulting from a 1,957% increase in KWHs purchased.

In the first quarter 2012, the average cost of purchased power from non-affiliates was 2.4 cents per net KWH compared to 8.8 cents per net KWH for the corresponding period in 2011. The decrease was primarily the result of a decrease in the average cost of natural gas.

Energy purchases from non-affiliates will vary depending on the market prices of wholesale energy as compared to the cost of the Southern Company system's generation, demand for energy within the Southern Company system's service territory, and the availability of the Southern Company system's generation.

Purchased Power Affiliates

In the first quarter 2012, purchased power expense from affiliates was \$2.5 million compared to \$16.6 million for the corresponding period in 2011. The decrease was primarily due to a \$14.3 million decrease in energy costs resulting from a 95.2% decrease in KWHs purchased, partially offset by a \$0.2 million increase in capacity costs.

In the first quarter 2012, the average cost of purchased power from affiliates was 14.5 cents per net KWH compared to 4.6 cents per net KWH for the corresponding period in 2011. The increase was primarily due to fewer KWHs purchased and increased capacity costs, partially offset by lower energy costs.

Table of Contents

GULF POWER COMPANY

**MANAGEMENT'S DISCUSSION AND ANALYSIS OF
FINANCIAL CONDITION AND RESULTS OF OPERATIONS**

Energy purchases from affiliates will vary depending on demand and the availability and cost of generating resources at each company within the Southern Company system. These purchases are made in accordance with the IIC or other contractual agreements, as approved by the FERC.

Other Operations and Maintenance Expenses

First Quarter 2012 vs. First Quarter 2011

<i>(change in millions)</i>	<i>(% change)</i>
\$ (5.3)	(6.6)

In the first quarter 2012, other operations and maintenance expenses were \$75.2 million compared to \$80.5 million for the corresponding period in 2011. The decrease was primarily due to an \$11.4 million decrease in routine and planned outage maintenance expense at generation facilities, partially offset by increases of \$3.5 million for labor and benefit-related expenses, \$1.4 million in marketing programs, and \$0.6 million in other energy services projects. The increased expense from energy service projects did not have a material impact on earnings since it was offset by associated revenues.

Depreciation and Amortization

First Quarter 2012 vs. First Quarter 2011

<i>(change in millions)</i>	<i>(% change)</i>
\$1.5	4.9

In the first quarter 2012, depreciation and amortization was \$33.3 million compared to \$31.8 million for the corresponding period in 2011. The increase was primarily due to net additions to transmission and distribution facilities.

Taxes Other Than Income Taxes

First Quarter 2012 vs. First Quarter 2011

<i>(change in millions)</i>	<i>(% change)</i>
\$ (1.1)	(4.5)

Edgar Filing: ALABAMA POWER CO - Form 10-Q

In the first quarter 2012, taxes other than income taxes were \$23.8 million compared to \$24.9 million for the corresponding period in 2011. The decrease was primarily due to a \$2.0 million decrease in gross receipt taxes and franchise fees, which have no impact on net income, partially offset by a \$0.4 million increase in property taxes and a \$0.5 million increase in payroll taxes.

Allowance for Equity Funds Used During Construction

First Quarter 2012 vs. First Quarter 2011

(change in millions)
\$(0.9)

(% change)
(42.1)

In the first quarter 2012, AFUDC equity was \$1.2 million compared to \$2.1 million for the corresponding period in 2011. The decrease was primarily due to an adjustment related to deferred future generation carrying costs, partially offset by increases related to construction of environmental control projects at generating facilities.

Table of Contents

GULF POWER COMPANY

**MANAGEMENT'S DISCUSSION AND ANALYSIS OF
FINANCIAL CONDITION AND RESULTS OF OPERATIONS**

Interest Expense, Net of Amounts Capitalized

First Quarter 2012 vs. First Quarter 2011

<i>(change in millions)</i>	<i>(% change)</i>
\$1.8	12.8

In the first quarter 2012, interest expense, net of amounts capitalized was \$15.4 million compared to \$13.6 million for the corresponding period in 2011. The increase was primarily due to net increases in long-term debt.

Income Taxes

First Quarter 2012 vs. First Quarter 2011

<i>(change in millions)</i>	<i>(% change)</i>
\$4.9	73.7

In the first quarter 2012, income taxes were \$11.7 million compared to \$6.8 million for the corresponding period in 2011. The increase was primarily due to higher pre-tax earnings, partially offset by a decrease in unrecognized tax benefits.

FUTURE EARNINGS POTENTIAL

The results of operations discussed above are not necessarily indicative of Gulf Power's future earnings potential. The level of Gulf Power's future earnings depends on numerous factors that affect the opportunities, challenges, and risks of Gulf Power's business of selling electricity. These factors include Gulf Power's ability to maintain a constructive regulatory environment that continues to allow for the timely recovery of prudently incurred costs during a time of increasing costs. Future earnings in the near term will depend, in part, upon maintaining energy sales which is subject to a number of factors. These factors include weather, competition, new energy contracts with neighboring utilities, energy conservation practiced by customers, the price of electricity, the price elasticity of demand, and the rate of economic growth or decline in Gulf Power's service territory. Changes in economic conditions impact sales for Gulf Power, and the pace of the economic recovery remains uncertain. The timing and extent of the economic recovery will impact growth and may impact future earnings. For additional information relating to these issues, see RISK FACTORS in Item 1A and MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL of Gulf Power in Item 7 of the Form 10-K.

Environmental Matters

Compliance costs related to federal and state environmental statutes and regulations could affect earnings if such costs cannot continue to be fully recovered in rates on a timely basis. Environmental compliance spending over the next several years may differ materially from the

Edgar Filing: ALABAMA POWER CO - Form 10-Q

amounts estimated. The timing, specific requirements, and estimated costs could change as environmental statutes and regulations are adopted or modified. Further, higher costs that are recovered through regulated rates could contribute to reduced demand for electricity, which could negatively affect results of operations, cash flows, and financial condition. See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - Environmental Matters of Gulf Power in Item 7 and Note 3 to the financial statements of Gulf Power under Environmental Matters in Item 8 of the Form 10-K for additional information.

New Source Review Actions

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL Environmental Matters New Source Review Actions of Gulf Power in Item 7 and Note 3 to the financial statements of Gulf Power under Environmental Matters New Source Review Actions in Item 8 of the Form 10-K for additional information. On February 23, 2012, the EPA filed a motion in the U.S. District Court for the Northern District of Alabama seeking vacatur of the judgment and recusal of the judge in the case involving Alabama Power. At the same time, the EPA asked the U.S. Court of Appeals for the Eleventh Circuit to stay its appeal of the judgment in favor of Alabama Power. Alabama Power filed oppositions to the EPA's motion and its request for a stay. On March 29, 2012, the U.S. Court of Appeals for the Eleventh Circuit denied the EPA's request to stay its appeal. The U.S. District Court for the Northern District of Alabama has not ruled on the EPA's motion seeking vacatur of the judgment. The ultimate outcome of this matter cannot be determined at this time.

Climate Change Litigation

Hurricane Katrina Case

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL Environmental Matters Climate Change Litigation Hurricane Katrina Case of Gulf Power in Item 7 and Note 3 to the financial statements of Gulf Power under Environmental Matters Climate Change Litigation Hurricane Katrina Case in Item 8 of the Form 10-K for additional information. On March 20, 2012, the U.S. District Court for the Southern District of Mississippi dismissed the amended class action complaint filed on May 27, 2011 by the plaintiffs. On April 16, 2012, the plaintiffs appealed the case to the U.S. Court of Appeals for the Fifth Circuit. The ultimate outcome of this matter cannot be determined at this time.

Environmental Statutes and Regulations

General

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL Environmental Matters Environmental Statutes and Regulations General of Gulf Power in Item 7 of the Form 10-K for information regarding Gulf Power's estimated base level capital expenditures to comply with existing statutes and regulations for 2012 through 2014, as well as Gulf Power's preliminary estimates for potential incremental environmental compliance investments associated with complying with the EPA's final Mercury and Air Toxics Standards (MATS) rule (formerly referred to as the Utility Maximum Achievable Control Technology rule) and the EPA's proposed water and coal combustion byproducts rules. Gulf Power is continuing to develop its compliance strategy and to assess the potential costs of complying with the MATS rule and the EPA's proposed water and coal combustion byproducts rules.

Gulf Power's compliance strategy, including potential unit retirement and replacement decisions, and future environmental capital expenditures are dependent on a final assessment of the MATS rule and will be affected by the final requirements of new or revised environmental regulations that are promulgated, including any proposed environmental regulations; the outcome of any legal challenges to the environmental rules; the cost, availability, and existing inventory of emissions allowances; and Gulf Power's fuel mix. These costs may arise from existing unit retirements, installation of additional environmental controls, upgrades to the transmission system, the addition of new generating resources, and changing fuel sources for certain existing units. Gulf Power's preliminary analysis further indicates that the short timeframe for compliance with the MATS rule could significantly affect electric system reliability and cause an increase in costs of materials and services. The ultimate outcome of these matters cannot be determined at this time.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Air Quality

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL Environmental Matters Environmental Statutes and Regulations Air Quality of Gulf Power in Item 7 of the Form 10-K for additional information on the eight-hour ozone air quality standards and the MATS rule.

On May 1, 2012, the EPA released its final determination of nonattainment areas based on the 2008 eight-hour ozone air quality standards. None of the areas within Gulf Power's service territory were designated as nonattainment areas.

Numerous petitions for administrative reconsideration of the MATS rule, including a petition by Southern Company and its subsidiaries, including Gulf Power, have been filed with the EPA. Challenges to the final rule have also been filed in the U.S. District Court of Appeals for the District of Columbia by numerous states, environmental organizations, industry groups, and others. The impact of the MATS rule will depend on the outcome of these and any other legal challenges and, therefore, cannot be determined at this time.

Coal Combustion Byproducts

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL Environmental Matters Environmental Statutes and Regulations Coal Combustion Byproducts of Gulf Power in Item 7 of the Form 10-K for additional information. On April 5, 2012, 10 environmental groups filed a lawsuit in the U.S. District Court for the District of Columbia seeking to require the EPA to complete its rulemaking process and issue final regulations pertaining to the regulation of coal combustion byproducts as soon as possible. Other parties are expected to file similar challenges. The ultimate outcome of this matter cannot be determined at this time.

Global Climate Issues

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL Environmental Matters Global Climate Issues of Gulf Power in Item 7 of the Form 10-K for additional information. On April 13, 2012, the EPA published proposed regulations to establish standards of performance for greenhouse gas emissions from new fossil fuel steam electric generating units. As proposed, the standards would not apply to existing units. The EPA has delayed its plans to propose greenhouse gas emissions performance standards for modified sources and emissions guidelines for existing sources. The impact of this rulemaking will depend on the scope and specific requirements of the final rule and the outcome of any legal challenges and, therefore, cannot be determined at this time.

PSC Matters

Retail Base Rate Case

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL PSC Matters Retail Base Rate Case of Gulf Power in Item 7 and Note 3 to the financial statements of Gulf Power under Retail Regulatory Matters Retail Base Rate Case in Item 8 of the Form 10-K for additional information.

On March 12, 2012, the Florida PSC approved a permanent increase in retail base rates and charges of \$64 million effective April 11, 2012. The amount of the permanent increase includes the previously approved \$38.5 million interim retail rate increase implemented in September 2011. The Florida PSC's decision on the amount of the permanent increase also included a determination that none of the base rate revenues collected on an interim basis would be refunded. Gulf Power's authorized retail ROE is a range of 9.25% to 11.25% with new retail base rates set at the midpoint retail ROE of 10.25%. In addition, the Florida PSC also approved a step increase to Gulf Power's retail base rates and charges of \$4 million to be effective in January 2013. On April 18, 2012, Gulf Power filed a motion to reconsider one aspect of the decision dealing with property acquired as a potential site for a future generating plant. If the motion is granted, the previously approved rates would be increased by an additional \$2 million. The ultimate outcome of this matter cannot be determined at this time.

Cost Recovery Clauses

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - PSC Matters - Cost Recovery Clauses of Gulf Power in Item 7 and Note 3 to the financial statements of Gulf Power under Retail Regulatory Matters - Cost Recovery Clauses in Item 8 of the Form 10-K for additional information.

Fuel Cost Recovery

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - PSC Matters - Fuel Cost Recovery of Gulf Power in Item 7 and Notes 1 and 3 to the financial statements of Gulf Power under Revenues and Retail Regulatory Matters - Fuel Cost Recovery, respectively, in Item 8 of the Form 10-K for additional information.

Over recovered fuel costs at March 31, 2012 totaled \$28.8 million compared to \$9.9 million at December 31, 2011. These amounts are included in other regulatory liabilities, current on Gulf Power's Condensed Balance Sheets herein.

Purchased Power Capacity Recovery

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - PSC Matters - Purchased Power Capacity Recovery of Gulf Power in Item 7 and Notes 1 and 3 to the financial statements of Gulf Power under Revenues and Retail Regulatory Matters - Purchased Power Capacity Recovery, respectively, in Item 8 of the Form 10-K for additional information.

Over recovered purchased power capacity costs at March 31, 2012 totaled \$9.6 million compared to \$8.0 million at December 31, 2011. These amounts are included in other regulatory liabilities, current on Gulf Power's Condensed Balance Sheets herein.

Environmental Cost Recovery

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - PSC Matters - Environmental Cost Recovery of Gulf Power in Item 7 and Note 3 to the financial statements of Gulf Power under Retail Regulatory Matters - Environmental Cost Recovery in Item 8 of the Form 10-K for additional information.

Over recovered environmental costs at March 31, 2012 totaled \$4.0 million compared to \$10.0 million at December 31, 2011. These amounts are included in other regulatory liabilities, current on Gulf Power's Condensed Balance Sheets herein.

On April 3, 2012, the Mississippi PSC approved Mississippi Power's request for a CPCN to construct a flue gas desulfurization system (scrubber) on Plant Daniel Units 1 and 2. These units are jointly owned by Mississippi Power and Gulf Power, with 50% ownership each. The estimated total cost of the project is approximately \$660 million, excluding AFUDC, and it is scheduled for completion in December 2015.

Energy Conservation Cost Recovery

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL PSC Matters Energy Conservation Cost Recovery of Gulf Power in Item 7 and Note 3 to the financial statements of Gulf Power under Retail Regulatory Matters Energy Conservation Cost Recovery in Item 8 of the Form 10-K for additional information.

Under recovered energy conservation costs at March 31, 2012 totaled \$2.0 million compared to \$3.1 million at December 31, 2011. These amounts are included in under recovered regulatory clause revenues on Gulf Power's Condensed Balance Sheets herein.

Income Tax Matters

Bonus Depreciation

In December 2010, the Tax Relief, Unemployment Insurance Reauthorization, and Job Creation Act of 2010 (Tax Relief Act) was signed into law. Major tax incentives in the Tax Relief Act include 100% bonus depreciation for property placed in service after September 8, 2010 and through 2011 (and for certain long-term construction projects to be placed in service in 2012) and 50% bonus depreciation for property placed in service in 2012 (and for certain long-term construction projects to be placed in service in 2013), which will have a positive impact on the future cash flows of Gulf Power through 2013. Consequently, Gulf Power's positive cash flow benefit is estimated to be between \$105 million and \$135 million in 2012.

Other Matters

Gulf Power is involved in various other matters being litigated and regulatory matters that could affect future earnings. In addition, Gulf Power is subject to certain claims and legal actions arising in the ordinary course of business. Gulf Power's business activities are subject to extensive governmental regulation related to public health and the environment, such as regulation of air emissions and water discharges. Litigation over environmental issues and claims of various types, including property damage, personal injury, common law nuisance, and citizen enforcement of environmental requirements such as air quality and water standards, has increased generally throughout the U.S. In particular, personal injury and other claims for damages caused by alleged exposure to hazardous materials, and common law nuisance claims for injunctive relief and property damage allegedly caused by greenhouse gas and other emissions, have become more frequent. The ultimate outcome of such pending or potential litigation against Gulf Power cannot be predicted at this time; however, for current proceedings not specifically reported herein or in Note 3 to the financial statements of Gulf Power in Item 8 of the Form 10-K, management does not anticipate that the ultimate liabilities, if any, arising from such current proceedings would have a material effect on Gulf Power's financial statements.

See the Notes to the Condensed Financial Statements herein for a discussion of various other contingencies, regulatory matters, and other matters being litigated which may affect future earnings potential.

ACCOUNTING POLICIES

Application of Critical Accounting Policies and Estimates

Gulf Power prepares its financial statements in accordance with GAAP. Significant accounting policies are described in Note 1 to the financial statements of Gulf Power in Item 8 of the Form 10-K. In the application of these policies, certain estimates are made that may have a material impact on Gulf Power's results of operations and related disclosures. Different assumptions and measurements could produce estimates that are significantly different from those recorded in the financial statements. See MANAGEMENT'S DISCUSSION AND ANALYSIS ACCOUNTING POLICIES

Table of Contents

FINANCIAL CONDITION AND LIQUIDITY

Overview

See MANAGEMENT'S DISCUSSION AND ANALYSIS FINANCIAL CONDITION AND LIQUIDITY Overview of Gulf Power in Item 7 of the Form 10-K for additional information. Gulf Power's financial condition remained stable at March 31, 2012. Gulf Power intends to continue to monitor its access to short-term and long-term capital markets as well as its bank credit arrangements to meet future capital and liquidity needs. See Sources of Capital, Financing Activities, and Capital Requirements and Contractual Obligations herein for additional information.

Net cash provided from operating activities totaled \$117.5 million for the first three months of 2012 compared to \$87.2 million for the corresponding period in 2011. The \$30.3 million increase was primarily due to a \$26.3 million increase in deferred income taxes related to bonus depreciation and a \$16.5 million increase related to reduced purchases of fossil fuel, partially offset by a \$16.0 million decrease related to lower retail operating revenues. Net cash used for investing activities totaled \$98.8 million in the first three months of 2012 compared to \$98.5 million for the corresponding period in 2011. The \$0.3 million increase was primarily due to a decrease in gross property additions. Net cash used for financing activities totaled \$16.9 million for the first three months of 2012 compared to \$15.1 million provided from financing activities for the corresponding period in 2011. The \$32.0 million change was primarily due to a \$20.7 million decrease in notes payable and a \$10 million decrease in issuances of common stock.

Significant balance sheet changes for the first quarter 2012 include a net increase of \$82.4 million in property, plant, and equipment, primarily due to the addition of environmental control projects, a \$56.7 million increase in accumulated deferred income taxes, primarily related to bonus depreciation, and the issuance of common stock to Southern Company for \$40 million.

Capital Requirements and Contractual Obligations

See MANAGEMENT'S DISCUSSION AND ANALYSIS FINANCIAL CONDITION AND LIQUIDITY Capital Requirements and Contractual Obligations of Gulf Power in Item 7 of the Form 10-K for a description of Gulf Power's capital requirements for its construction program, maturities of long-term debt, as well as the related interest, leases, derivative obligations, preference stock dividends, purchase commitments, and trust funding requirements. There are no requirements through March 31, 2013 to fund maturities of long-term debt.

The construction program is subject to periodic review and revision, and actual construction costs may vary from these estimates because of numerous factors. These factors include: changes in business conditions; changes in load projections; storm impacts; changes in environmental statutes and regulations; the outcome of any legal challenges to the environmental rules; changes in generating plants, including unit retirements and replacements and adding or changing fuel sources at existing units, to meet new regulatory requirements; changes in FERC rules and regulations; Florida PSC approvals; changes in legislation; the cost and efficiency of construction labor, equipment, and materials; project scope and design changes; and the cost of capital. In addition, there can be no assurance that costs related to capital expenditures will be fully recovered.

Table of Contents**GULF POWER COMPANY**

MANAGEMENT'S DISCUSSION AND ANALYSIS OF
FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Sources of Capital

Gulf Power plans to obtain the funds required for construction and other purposes from sources similar to those used in the past, which were primarily from operating cash flows, short-term debt, security issuances, term loans, and equity contributions from Southern Company. However, the amount, type, and timing of any future financings, if needed, will depend upon regulatory approval, prevailing market conditions, and other factors. See MANAGEMENT'S DISCUSSION AND ANALYSIS FINANCIAL CONDITION AND LIQUIDITY Sources of Capital of Gulf Power in Item 7 of the Form 10-K for additional information.

Gulf Power's current liabilities frequently exceed current assets because of the continued use of short-term debt as a funding source to meet scheduled maturities of long-term debt, as well as cash needs, which can fluctuate significantly due to the seasonality of the business.

At March 31, 2012, Gulf Power had approximately \$19.1 million of cash and cash equivalents. Committed credit arrangements with banks at March 31, 2012 were as follows:

2012	Expires		Total	Unused	Executable Term Loans		Due Within One Year ^(a)	
	2013	2014 and Beyond			One Year	Two Year	Term Out	No Term Out
	<i>(in millions)</i>			<i>(in millions)</i>	<i>(in millions)</i>		<i>(in millions)</i>	
\$75	\$35	\$165	\$275	\$275	\$75	\$	\$75	\$35

(a) Reflects facilities expiring on or before March 31, 2013.

See Note 6 to the financial statements of Gulf Power under Bank Credit Arrangements in Item 8 of the Form 10-K and Note (E) to the Condensed Financial Statements under Bank Credit Arrangements herein for additional information.

During the first quarter 2012, Gulf Power entered into a new \$35 million 364-day committed credit arrangement.

Most of these arrangements contain covenants that limit debt levels and typically contain cross default provisions that are restricted only to the indebtedness of Gulf Power. Gulf Power is currently in compliance with all such covenants. Gulf Power expects to renew its credit arrangements, as needed, prior to expiration. These credit arrangements provide liquidity support to Gulf Power's commercial paper borrowings and variable rate pollution control revenue bonds. The amount of variable rate pollution control revenue bonds outstanding requiring liquidity support as of March 31, 2012 was approximately \$69 million.

Gulf Power may also meet short-term cash needs through a Southern Company subsidiary organized to issue and sell commercial paper at the request and for the benefit of Gulf Power and the other traditional operating companies. Proceeds from such issuances for the benefit of Gulf Power are loaned directly to Gulf Power. The obligations of each traditional operating company under these arrangements are several and there is no cross affiliate credit support.

Table of Contents**GULF POWER COMPANY**

MANAGEMENT'S DISCUSSION AND ANALYSIS OF
FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Details of short-term borrowings were as follows:

	Short-term Debt at the End of the Period		Short-term Debt During the Period ^(a)		
	Amount Outstanding	Weighted Average Interest Rate	Average Outstanding	Weighted Average Interest Rate	Maximum Amount Outstanding
	(in millions)		(in millions)		(in millions)
March 31, 2012:					
Commercial paper	\$84	0.2%	\$85	0.2%	\$117

(a) Average and maximum amounts are based upon daily balances during the period.

Management believes that the need for working capital can be adequately met by utilizing the commercial paper program, lines of credit, and cash.

Credit Rating Risk

Gulf Power does not have any credit arrangements that would require material changes in payment schedules or terminations as a result of a credit rating downgrade. There are certain contracts that could require collateral, but not accelerated payment, in the event of a credit rating change to BBB- and/or Baa3 or below. These contracts are for physical electricity purchases and sales, fuel transportation and storage, and energy price risk management. The maximum potential collateral requirements under these contracts at March 31, 2012 were as follows:

Credit Ratings	Maximum Potential Collateral Requirements
	(in millions)
At BBB- and/or Baa3	\$126
Below BBB- and/or Baa3	539

Included in these amounts are certain agreements that could require collateral in the event that one or more Power Pool participant has a credit rating change to below investment grade. Generally, collateral may be provided by a Southern Company guaranty, letter of credit, or cash. Additionally, any credit rating downgrade could impact Gulf Power's ability to access capital markets, particularly the short-term debt market.

Market Price Risk

Gulf Power's market risk exposure relative to interest rate changes for the first quarter 2012 has not changed materially compared with the December 31, 2011 reporting period. Since a significant portion of outstanding indebtedness is at fixed rates, Gulf Power is not aware of any

Edgar Filing: ALABAMA POWER CO - Form 10-Q

facts or circumstances that would significantly affect exposures on existing indebtedness in the near term. However, the impact on future financing costs cannot now be determined.

Due to cost-based rate regulation and other various cost recovery mechanisms, Gulf Power continues to have limited exposure to market volatility in interest rates, commodity fuel prices, and prices of electricity. Gulf Power continues to manage a financial hedging program for fuel purchased to operate its electric generating fleet implemented per the

Table of Contents

GULF POWER COMPANY
MANAGEMENT'S DISCUSSION AND ANALYSIS OF
FINANCIAL CONDITION AND RESULTS OF OPERATIONS

guidelines of the Florida PSC. As such, Gulf Power had no material change in market risk exposure for the first quarter 2012 when compared with the December 31, 2011 reporting period.

The changes in fair value of energy-related derivative contracts, substantially all of which are composed of regulatory hedges, for the three months ended March 31, 2012 were as follows:

	First Quarter
	2012
	Changes
	Fair Value
	<i>(in millions)</i>
Contracts outstanding at the beginning of the period, assets (liabilities), net	\$(41)
Contracts realized or settled	6
Current period changes ^(a)	(19)
Contracts outstanding at the end of the period, assets (liabilities), net	\$(54)

(a) Current period changes also include the changes in fair value of new contracts entered into during the period, if any. The change in the fair value positions of the energy-related derivative contracts for the three months ended March 31, 2012 was a decrease of \$13 million, of which \$12 million related to natural gas swaps and \$1 million related to natural gas options. The change is attributable to both the volume of mmBtu and the price of natural gas. At March 31, 2012, Gulf Power had a net hedge volume of 43 million mmBtu, which consisted of 41 million mmBtu of swaps and 2 million mmBtu of options. The weighted average swap contract cost was approximately \$1.27 per mmBtu above market prices. At December 31, 2011, Gulf Power had a net hedge volume of 38 million mmBtu, which consisted of 35 million mmBtu of swaps and 3 million mmBtu of options. The weighted average swap contract cost was approximately \$1.14 per mmBtu above market prices. The change in option premiums is primarily attributable to the volatility of the market and the underlying change in the natural gas price. Natural gas settlements are recovered through Gulf Power's fuel cost recovery clause.

Regulatory hedges relate to Gulf Power's fuel-hedging program where gains and losses are initially recorded as regulatory liabilities and assets, respectively, and then are included in fuel expense as they are recovered through Gulf Power's fuel cost recovery clause.

Unrealized pre-tax gains and losses recognized in income for the three months ended March 31, 2012 and 2011 for energy-related derivative contracts that are not hedges were not material.

Gulf Power uses over-the-counter contracts that are not exchange traded but are fair valued using prices which are market observable, and thus fall into Level 2. See Note (C) to the Condensed Financial Statements herein for further discussion on fair value measurements. The maturities of the energy-related derivative contracts and the level of the fair value hierarchy in which they fall at March 31, 2012 were as follows:

March 31, 2012

Fair Value Measurements

	Total	Maturity		
	Fair Value	Year 1	Years 2&3	Years 4&5
	<i>(in millions)</i>			
Level 1	\$	\$	\$	\$
Level 2	(54)	(33)	(20)	(1)
Level 3				
Fair value of contracts outstanding at end of period	\$(54)	\$(33)	\$(20)	\$(1)

Table of Contents

GULF POWER COMPANY

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) enacted in July 2010 could impact the use of over-the-counter derivatives by Gulf Power. Regulations to implement the Dodd-Frank Act could impose additional requirements on the use of over-the-counter derivatives, such as margin and reporting requirements, which could affect both the use and cost of over-the-counter derivatives. The impact, if any, cannot be determined until all relevant regulations are finalized.

For additional information, see MANAGEMENT'S DISCUSSION AND ANALYSIS FINANCIAL CONDITION AND LIQUIDITY Market Price Risk of Gulf Power in Item 7 and Note 1 under Financial Instruments and Note 10 to the financial statements of Gulf Power in Item 8 of the Form 10-K and Note (H) to the Condensed Financial Statements herein.

Financing Activities

In January 2012, Gulf Power issued to Southern Company 400,000 shares of Gulf Power's common stock, without par value, and realized proceeds of \$40 million. The proceeds were used to repay a portion of Gulf Power's short-term debt and for other general corporate purposes, including Gulf Power's continuous construction program.

In addition to any financings that may be necessary to meet capital requirements, contractual obligations, and storm-recovery, Gulf Power plans to continue, when economically feasible, a program to retire higher-cost securities and replace these obligations with lower-cost capital if market conditions permit.

MISSISSIPPI POWER COMPANY

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

FIRST QUARTER 2012 vs. FIRST QUARTER 2011

OVERVIEW

Mississippi Power operates as a vertically integrated utility providing electricity to retail customers within its traditional service territory located within the State of Mississippi and to wholesale customers in the Southeast. Many factors affect the opportunities, challenges, and risks of Mississippi Power's business of selling electricity. These factors include the ability to maintain a constructive regulatory environment, to maintain and grow energy sales given economic conditions, and to effectively manage and secure timely recovery of rising costs. These costs include those related to projected long-term demand growth, increasingly stringent environmental standards, fuel prices, capital expenditures, and restoration following major storms. In addition, Mississippi Power is currently constructing the Kemper IGCC. Mississippi Power has various regulatory mechanisms that operate to address cost recovery. Appropriately balancing required costs and capital expenditures with customer prices will continue to challenge Mississippi Power for the foreseeable future.

Mississippi Power continues to focus on several key performance indicators. In recognition that Mississippi Power's long-term financial success is dependent upon how well it satisfies its customers' needs, Mississippi Power's retail base rate mechanism, PEP, includes performance indicators that directly tie customer service indicators to Mississippi Power's allowed return. In addition to the PEP performance indicators, Mississippi Power focuses on other performance measures, including broader measures of customer satisfaction, plant availability, system reliability, and net income after dividends on preferred stock. For additional information on these indicators, see MANAGEMENT'S DISCUSSION AND ANALYSIS OVERVIEW Key Performance Indicators of Mississippi Power in Item 7 of the Form 10-K.

RESULTS OF OPERATIONS

Net Income

First Quarter 2012 vs. First Quarter 2011

(change in millions)
\$10.7

(% change)
72.8

Mississippi Power's net income after dividends on preferred stock for the first quarter 2012 was \$25.3 million compared to \$14.6 million for the corresponding period in 2011. The increase in net income after dividends on preferred stock for the first quarter 2012 was the result of an increase in AFUDC equity primarily related to the construction of the Kemper IGCC, which began in June 2010, and a decrease in operations and maintenance expenses. These factors were partially offset by a decrease in territorial base revenues resulting from milder weather in the first quarter 2012 compared to the corresponding period in 2011. See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL Integrated Coal Gasification Combined Cycle and Note (B) to the Condensed Financial Statements herein for additional information regarding the Kemper IGCC.

Table of Contents**MISSISSIPPI POWER COMPANY****MANAGEMENT'S DISCUSSION AND ANALYSIS OF
FINANCIAL CONDITION AND RESULTS OF OPERATIONS*****Retail Revenues***

First Quarter 2012 vs. First Quarter 2011

(change in millions)
\$(14.2)*(% change)*
(7.9)

In the first quarter 2012, retail revenues were \$166.3 million compared to \$180.5 million for the corresponding period in 2011.

Details of the change to retail revenues were as follows:

	First Quarter	
	2012	
	<i>(in millions)</i>	<i>(% change)</i>
Retail prior year	\$180.5	
Estimated change in		
Rates and pricing	(1.1)	(0.6)
Sales growth (decline)	3.1	1.7
Weather	(4.9)	(2.7)
Fuel and other cost recovery	(11.3)	(6.3)
Retail current year	\$166.3	(7.9)%

Revenues associated with changes in rates and pricing decreased in the first quarter 2012 when compared to the corresponding period in 2011 due to a decrease of \$1.1 million related to the ECO Plan rate.

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL PSC Matters Environmental Compliance Overview Plan of Mississippi Power in Item 7 of the Form 10-K and FUTURE EARNINGS POTENTIAL PSC Matters Environmental Compliance Overview Plan herein for additional information.

Revenues attributable to changes in sales increased in the first quarter 2012 when compared to the corresponding period in 2011. KWH energy sales to industrial customers increased 4.7% due to increased production for several large industrial customers resulting from continued economic recovery. Weather-adjusted KWH energy sales to residential and commercial customers increased 1.2% and 0.9%, respectively, when compared to the corresponding period in 2011 due to a small increase in the number of customers.

Revenues attributable to changes in weather decreased in the first quarter 2012 when compared to the corresponding period for 2011 primarily due to milder weather in the first quarter 2012.

Fuel and other cost recovery revenues decreased in the first quarter 2012 when compared to the corresponding period in 2011 primarily as a result of lower recoverable fuel costs. Recoverable fuel costs include fuel and purchased power expenses reduced by the fuel portion of

Edgar Filing: ALABAMA POWER CO - Form 10-Q

wholesale revenues from energy sold to customers outside Mississippi Power's service territory. Electric rates include provisions to adjust billings for fluctuations in fuel costs, including the energy component of purchased power costs. Under these provisions, fuel revenues generally equal fuel expenses, including the fuel component of purchased power costs, and do not affect net income.

Table of Contents**MISSISSIPPI POWER COMPANY****MANAGEMENT'S DISCUSSION AND ANALYSIS OF
FINANCIAL CONDITION AND RESULTS OF OPERATIONS*****Wholesale Revenues - Non-Affiliates***

First Quarter 2012 vs. First Quarter 2011

(change in millions)
\$(15.7)*(% change)*
(22.4)

Wholesale revenues from sales to non-affiliates will vary depending on fuel prices, the market prices of wholesale energy compared to the cost of Mississippi Power's and the Southern Company system's generation, demand for energy within the Southern Company system's service territory, and the availability of the Southern Company system's generation. Increases and decreases in revenues that are driven by fuel prices are accompanied by an increase or decrease in fuel costs and do not have a significant impact on net income.

In the first quarter 2012, wholesale revenues from non-affiliates were \$54.2 million compared to \$69.9 million for the corresponding period in 2011. The decrease was due to a \$10.9 million decrease in energy revenues, of which \$5.0 million was associated with a decrease in KWH sales due to lower demand primarily resulting from milder weather in the first quarter 2012 compared to the corresponding period in 2011 and \$5.9 million was associated with lower fuel prices, and a \$4.8 million decrease in capacity revenues resulting from lower customer demand.

Wholesale Revenues - Affiliates

First Quarter 2012 vs. First Quarter 2011

(change in millions)
\$(5.3)*(% change)*
(56.6)

Wholesale revenues from sales to affiliated companies within the Southern Company system will vary depending on demand and the availability and cost of generating resources at each company. These affiliate sales are made in accordance with the IIC, as approved by the FERC. These transactions do not have a significant impact on earnings since the energy is generally sold at marginal cost.

In the first quarter 2012, wholesale revenues from affiliates were \$4.0 million compared to \$9.3 million for the corresponding period in 2011. The decrease was primarily due to a \$5.2 million decrease in energy revenues, of which \$2.8 million was associated with a decrease in KWH sales and \$2.4 million was associated with lower prices.

Fuel and Purchased Power Expenses

First Quarter 2012 vs. First Quarter 2011

	<i>(change in millions)</i>	<i>(% change)</i>
Fuel	(\$32.5)	(26.8)
Purchased power - non-affiliates	0.9	92.4

Edgar Filing: ALABAMA POWER CO - Form 10-Q

Purchased power	affiliates	0.6	6.1
-----------------	------------	-----	-----

Total fuel and purchased power expenses (\$31.0)

In the first quarter 2012, total fuel and purchased power expenses were \$99.4 million compared to \$130.4 million for the corresponding period in 2011. The decrease was primarily due to an \$18.0 million decrease in the cost of fuel and purchased power and a \$13.0 million decrease in total KWHs generated and purchased as a result of lower KWH demand primarily due to milder weather in the first quarter 2012.

Fuel and purchased power energy transactions do not have a significant impact on earnings since energy expenses are generally offset by energy revenues through Mississippi Power's fuel cost recovery clause. See FUTURE EARNINGS POTENTIAL - PSC Matters herein for additional information.

Table of Contents**MISSISSIPPI POWER COMPANY****MANAGEMENT'S DISCUSSION AND ANALYSIS OF****FINANCIAL CONDITION AND RESULTS OF OPERATIONS**

Details of Mississippi Power's generation and purchased power were as follows:

	First Quarter	First Quarter
	2012	2011
Total generation (<i>millions of KWHs</i>)	2,982	3,364
Total purchased power (<i>millions of KWHs</i>)	447	304
Sources of generation (<i>percent</i>)		
Coal	21	35
Gas	79	65
Cost of fuel, generated (<i>cents per net KWH</i>)		
Coal	4.77	4.23
Gas	2.83	3.72
Average cost of fuel, generated (<i>cents per net KWH</i>)	3.29	3.92
Average cost of purchased power (<i>cents per net KWH</i>)	2.42	3.08

Fuel

In the first quarter 2012, fuel expense was \$88.6 million compared to \$121.1 million for the corresponding period in 2011. The decrease was primarily due to a 23.9% decrease in the average cost of natural gas per KWH generated primarily resulting from lower gas prices and a 12.7% decrease in generation from Mississippi Power's facilities resulting from lower energy demand primarily due to milder weather in the first quarter 2012 compared to the corresponding period in 2011.

Purchased Power - Non-Affiliates

In the first quarter 2012, purchased power expense from non-affiliates was \$1.9 million compared to \$1.0 million for the corresponding period in 2011. The increase was primarily the result of a 77.6% increase in KWH volume purchased and an 8.3% increase in the average cost of purchased power per KWH. The increase in the volume of KWHs purchased was due to a decrease in generation from Mississippi Power's facilities. The increase in the average cost per KWH purchased was due to a higher marginal cost of fuel.

Energy purchases from non-affiliates will vary depending on the market prices of wholesale energy compared to the cost of the Southern Company system's generation, demand for energy within the Southern Company system's service territory, and the availability of the Southern Company system's generation.

Purchased Power - Affiliates

In the first quarter 2012, purchased power expense from affiliates was \$8.9 million compared to \$8.3 million for the corresponding period in 2011. The increase was primarily due to a 40.3% increase in KWH volume purchased, partially offset by a 24.4% decrease in the average cost of purchased power per KWH.

Edgar Filing: ALABAMA POWER CO - Form 10-Q

Energy purchases from affiliates will vary depending on demand for energy and the availability and cost of generating resources at each company within the Southern Company system. These purchases are made in accordance with the IIC, as approved by the FERC.

Table of Contents**MISSISSIPPI POWER COMPANY****MANAGEMENT'S DISCUSSION AND ANALYSIS OF
FINANCIAL CONDITION AND RESULTS OF OPERATIONS*****Other Operations and Maintenance Expenses***

First Quarter 2012 vs. First Quarter 2011

(change in millions)
\$(15.5)*(% change)*
(22.0)

In the first quarter 2012, other operations and maintenance expenses were \$54.9 million compared to \$70.4 million for the corresponding period in 2011. The decrease was primarily due to a \$10.8 million decrease in rent expense and expenses under a long-term service agreement resulting from the expiration of an operating lease for Plant Daniel Units 3 and 4 in October 2011 and a \$6.5 million decrease in generation expenses primarily related to scheduled outages. These decreases were partially offset by a \$1.3 million increase in administrative and general expenses. See Note 1 to the financial statements of Mississippi Power under "Purchase of the Plant Daniel Combined Cycle Generating Units" in Item 8 of the Form 10-K for additional information.

Depreciation and Amortization

First Quarter 2012 vs. First Quarter 2011

(change in millions)
\$2.6*(% change)*
13.2

In the first quarter 2012, depreciation and amortization was \$22.5 million compared to \$19.9 million for the corresponding period in 2011. The increase was primarily due to a \$3.3 million increase in depreciation on additional plant in service and a \$1.9 million increase in amortization resulting from the plant acquisition adjustment related to the purchase of Plant Daniel Units 3 and 4. These increases were partially offset by a \$2.6 million decrease in amortization primarily resulting from a regulatory deferral associated with the purchase of Plant Daniel Units 3 and 4.

See Note 1 to the financial statements of Mississippi Power under "Purchase of the Plant Daniel Combined Cycle Generating Units" and "Depreciation and Amortization" in Item 8 of the Form 10-K for additional information.

Taxes Other Than Income Taxes

First Quarter 2012 vs. First Quarter 2011

(change in millions)
\$4.2*(% change)*
24.2

In the first quarter 2012, taxes other than income taxes were \$21.7 million compared to \$17.5 million for the corresponding period in 2011. The increase was primarily due to a \$4.0 million increase in ad valorem taxes and a \$0.2 million increase in franchise taxes.

Edgar Filing: ALABAMA POWER CO - Form 10-Q

The retail portion of ad valorem taxes is recoverable under Mississippi Power's ad valorem tax cost recovery clause and, therefore, does not affect net income.

Allowance for Equity Funds Used During Construction

First Quarter 2012 vs. First Quarter 2011

(change in millions)
\$8.7

(% change)
N/M

N/M Not meaningful

In the first quarter 2012, AFUDC equity was \$11.8 million compared to \$3.1 million for the corresponding period in 2011. The increase was primarily due to the construction of the Kemper IGCC.

Table of Contents**MISSISSIPPI POWER COMPANY****MANAGEMENT'S DISCUSSION AND ANALYSIS OF****FINANCIAL CONDITION AND RESULTS OF OPERATIONS**

See Note 3 to the financial statements of Mississippi Power under "Integrated Coal Gasification Combined Cycle" in Item 8 of the Form 10-K and FUTURE EARNINGS POTENTIAL "Integrated Coal Gasification Combined Cycle" herein for additional information regarding the Kemper IGCC.

Interest Expense, Net of Amounts Capitalized**First Quarter 2012 vs. First Quarter 2011**

<i>(change in millions)</i>	<i>(% change)</i>
\$1.8	29.8

In the first quarter 2012, interest expense, net of amounts capitalized was \$7.8 million compared to \$6.0 million for the corresponding period in 2011. The increase was primarily due to an \$8.6 million increase in interest expense associated with the issuances of new long-term debt in April 2011, September 2011, October 2011, and March 2012 and a \$1.1 million increase in interest expense resulting from the receipt of a \$150 million interest-bearing refundable deposit from SMEPA in March 2012 related to its pending purchase of a 17.5% undivided interest in the Kemper IGCC. The increase was partially offset by a \$5.6 million increase in capitalized interest primarily resulting from AFUDC debt associated with the Kemper IGCC and a \$1.9 million decrease in interest expense resulting from the amortization of the fair value adjustment on the assumed debt related to the purchase of Plant Daniel Units 3 and 4 in October 2011.

See Note 1 to the financial statements of Mississippi Power under "Purchase of the Plant Daniel Combined Cycle Generating Units" in Item 8 of the Form 10-K and FUTURE EARNINGS POTENTIAL "Integrated Coal Gasification Combined Cycle" herein for additional information.

Income Taxes**First Quarter 2012 vs. First Quarter 2011**

<i>(change in millions)</i>	<i>(% change)</i>
\$1.2	17.7

In the first quarter 2012, income taxes were \$8.4 million compared to \$7.2 million for the corresponding period in 2011. The increase was primarily due to a \$4.7 million increase resulting from higher pre-tax earnings and a \$0.3 million increase due to lower State of Mississippi manufacturing investment tax credits, partially offset by a \$3.4 million decrease due to higher AFUDC equity, which is non-taxable, and a \$0.3 million decrease in unrecognized tax benefits.

FUTURE EARNINGS POTENTIAL

The results of operations discussed above are not necessarily indicative of Mississippi Power's future earnings potential. The level of Mississippi Power's future earnings depends on numerous factors that affect the opportunities, challenges, and risks of Mississippi Power's business of selling electricity. These factors include Mississippi Power's ability to maintain a constructive regulatory environment that continues to allow for the timely recovery of prudently incurred costs during a time of increasing costs. Future earnings in the near term will depend, in part, upon maintaining energy sales which is subject to a number of factors. These factors include weather, competition, new energy contracts with neighboring utilities, energy conservation practiced by customers, the price of electricity, the price elasticity of demand, and the rate of

Edgar Filing: ALABAMA POWER CO - Form 10-Q

economic growth or decline in Mississippi Power's service territory. Changes in economic conditions impact sales for Mississippi Power and the pace of the economic recovery remains uncertain. The timing and extent of the economic recovery will impact growth and may impact future earnings. For additional information relating to these issues, see RISK FACTORS in Item 1A and MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL of Mississippi Power in Item 7 of the Form 10-K.

Table of Contents

MISSISSIPPI POWER COMPANY

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Environmental Matters

Compliance costs related to federal and state environmental statutes and regulations could affect earnings if such costs cannot continue to be fully recovered in rates on a timely basis. Environmental compliance spending over the next several years may differ materially from the amounts estimated. The timing, specific requirements, and estimated costs could change as environmental statutes and regulations are adopted or modified. Further, higher costs that are recovered through regulated rates could contribute to reduced demand for electricity, which could negatively affect results of operations, cash flows, and financial condition. See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - Environmental Matters of Mississippi Power in Item 7 and Note 3 to the financial statements of Mississippi Power under Environmental Matters in Item 8 of the Form 10-K for additional information.

New Source Review Actions

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - Environmental Matters - New Source Review Actions of Mississippi Power in Item 7 and Note 3 to the financial statements of Mississippi Power under Environmental Matters - New Source Review Actions in Item 8 of the Form 10-K for additional information. On February 23, 2012, the EPA filed a motion in the U.S. District Court for the Northern District of Alabama seeking vacatur of the judgment and recusal of the judge in the case involving Alabama Power (including claims related to a unit co-owned by Mississippi Power). At the same time, the EPA asked the U.S. Court of Appeals for the Eleventh Circuit to stay its appeal of the judgment in favor of Alabama Power. Alabama Power filed oppositions to the EPA's motion and its request for a stay. On March 29, 2012, the U.S. Court of Appeals for the Eleventh Circuit denied the EPA's request to stay its appeal. The U.S. District Court for the Northern District of Alabama has not ruled on the EPA's motion seeking vacatur of the judgment. The ultimate outcome of this matter cannot be determined at this time.

Environmental Statutes and Regulations

General

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - Environmental Matters - Environmental Statutes and Regulations - General of Mississippi Power in Item 7 of the Form 10-K for information regarding Mississippi Power's estimated base level capital expenditures to comply with existing statutes and regulations for 2012 through 2014, as well as Mississippi Power's preliminary estimates for potential incremental environmental compliance investments associated with complying with the EPA's final Mercury and Air Toxics Standards (MATS) rule (formerly referred to as the Utility Maximum Achievable Control Technology rule) and the EPA's proposed water and coal combustion byproducts rules. Mississippi Power is continuing to develop its compliance strategy and to assess the potential costs of complying with the MATS rule and the EPA's proposed water and coal combustion byproducts rules.

Mississippi Power's compliance strategy, including potential unit retirement and replacement decisions, and future environmental capital expenditures are dependent on a final assessment of the MATS rule and will be affected by the final requirements of new or revised environmental regulations that are promulgated, including any proposed environmental regulations; the outcome of any legal challenges to the environmental rules; the cost, availability, and existing inventory of emissions allowances; and Mississippi Power's fuel mix. These costs may arise from existing unit retirements, installation of additional environmental controls, upgrades to the transmission system, the addition of new generating resources, and changing fuel sources for certain existing units. Mississippi Power's preliminary analysis further indicates that the short timeframe for compliance with the MATS rule could significantly affect electric system reliability and cause an increase in costs of materials and services. The ultimate outcome of these matters cannot be determined at this time.

Table of Contents

MISSISSIPPI POWER COMPANY

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Air Quality

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL Environmental Matters Environmental Statutes and Regulations Air Quality of Mississippi Power in Item 7 of the Form 10-K for additional information on the eight-hour ozone air quality standards and the MATS rule.

On May 1, 2012, the EPA released its final determination of nonattainment areas based on the 2008 eight-hour ozone air quality standards. None of the areas within Mississippi Power's service territory were designated as nonattainment areas.

Numerous petitions for administrative reconsideration of the MATS rule, including a petition by Southern Company and its subsidiaries, including Mississippi Power, have been filed with the EPA. Challenges to the final rule have also been filed in the U.S. District Court of Appeals for the District of Columbia by numerous states, environmental organizations, industry groups, and others. The impact of the MATS rule will depend on the outcome of these and any other legal challenges and, therefore, cannot be determined at this time.

Coal Combustion Byproducts

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL Environmental Matters Environmental Statutes and Regulations Coal Combustion Byproducts of Mississippi Power in Item 7 of the Form 10-K for additional information. On April 5, 2012, 10 environmental groups filed a lawsuit in the U.S. District Court for the District of Columbia seeking to require the EPA to complete its rulemaking process and issue final regulations pertaining to the regulation of coal combustion byproducts as soon as possible. Other parties are expected to file similar challenges. The ultimate outcome of this matter cannot be determined at this time.

Global Climate Issues

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL Environmental Matters Global Climate Issues of Mississippi Power in Item 7 of the Form 10-K for additional information. On April 13, 2012, the EPA published proposed regulations to establish standards of performance for greenhouse gas emissions from new fossil fuel steam electric generating units. As proposed, the standards would not apply to existing units. The EPA has delayed its plans to propose greenhouse gas emissions performance standards for modified sources and emissions guidelines for existing sources. The impact of this rulemaking will depend on the scope and specific requirements of the final rule and the outcome of any legal challenges and, therefore, cannot be determined at this time.

FERC Matters

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL FERC Matters of Mississippi Power in Item 7 and Note 3 to the financial statements of Mississippi Power under FERC Matters in Item 8 of the Form 10-K for additional information.

On January 20, 2012, Mississippi Power reached a settlement agreement with its wholesale customers, which was executed by all parties on March 9, 2012. The settlement agreement provides that base rates under the cost-based electric tariff will increase by approximately \$22.6 million over a 12-month period with revised rates effective April 1, 2012. In 2012, the amount of base rate revenues to be received from the agreed upon increase will be approximately \$17.0 million. On March 12, 2012, Mississippi Power filed an unopposed motion to place wholesale Municipal and Rural Associations (MRA) interim rates into effect pending approval of the settlement agreement between the parties by the FERC. On March 28, 2012, the FERC approved the motion to place interim rates into effect beginning in May 2012. Approval of the settlement agreement by the FERC has been delayed until later in the year.

The ultimate outcome of this matter cannot be determined at this time.

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

PSC Matters

Performance Evaluation Plan

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - PSC Matters - Performance Evaluation Plan of Mississippi Power in Item 7 and Note 3 to the financial statements of Mississippi Power under Retail Regulatory Matters - Performance Evaluation Plan in Item 8 of the Form 10-K for additional information regarding Mississippi Power's base rates.

On April 2, 2012, Mississippi Power filed a motion to suspend the 2011 PEP lookback filing. Unresolved matters related to certain costs included in the 2010 PEP lookback filing also impact the 2011 PEP lookback filing, making it impractical to determine Mississippi Power's actual retail return on investment for 2011 for purposes of the 2011 PEP lookback filing. The ultimate outcome of these matters cannot be determined at this time.

Environmental Compliance Overview Plan

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - PSC Matters - Environmental Compliance Overview Plan of Mississippi Power in Item 7 and Note 3 to the financial statements of Mississippi Power under Retail Regulatory Matters - Environmental Compliance Overview Plan in Item 8 of the Form 10-K for information on Mississippi Power's annual environmental filing with the Mississippi PSC.

On April 3, 2012, the Mississippi PSC approved Mississippi Power's request for a CPCN to construct a flue gas desulfurization system (scrubber) on Plant Daniel Units 1 and 2. These units are jointly owned by Mississippi Power and Gulf Power, with 50% ownership each. The estimated total cost of the project is approximately \$660 million, with Mississippi Power's portion being \$330 million, excluding AFUDC. The project is scheduled for completion in December 2015. Mississippi Power's portion of the cost is expected to be recovered through the ECO Plan. As of March 31, 2012, total project expenditures were \$55.6 million, with Mississippi Power's portion being \$27.8 million.

On February 14, 2012, Mississippi Power submitted its 2012 ECO Plan notice, which proposed a 0.3% increase in annual revenues for Mississippi Power. In compliance with the CPCN to construct scrubbers on Plant Daniel Units 1 and 2, Mississippi Power will revise the 2012 ECO Plan notice excluding scrubber expenditures from rate base, which is expected to result in little or no rate change.

The ultimate outcome of these matters cannot be determined at this time.

Fuel Cost Recovery

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - PSC Matters - Fuel Cost Recovery of Mississippi Power in Item 7 and Note 3 to the financial statements of Mississippi Power under Retail Regulatory Matters - Fuel Cost Recovery in Item 8 of the Form 10-K for information regarding Mississippi Power's fuel cost recovery.

At March 31, 2012, the amount of over recovered retail fuel costs included in Mississippi Power's Condensed Balance Sheets herein was \$50.9 million compared to \$42.4 million at December 31, 2011. Mississippi Power also has a wholesale MRA and a Market Based (MB) fuel cost recovery factor. At March 31, 2012, the amount of over recovered

Table of Contents

MISSISSIPPI POWER COMPANY

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

wholesale MRA and MB fuel costs included in Mississippi Power's Condensed Balance Sheets was \$18.1 million and \$2.4 million, respectively, compared to \$14.3 million and \$2.2 million, respectively, at December 31, 2011. In addition, at March 31, 2012 and December 31, 2011, the amount of over recovered MRA emissions allowance cost included in Mississippi Power's Condensed Balance Sheets herein was \$1.7 million. Mississippi Power's operating revenues are adjusted for differences in actual recoverable fuel cost and amounts billed in accordance with the currently approved cost recovery rate. Accordingly, this decrease to the billing factors will have no significant effect on Mississippi Power's revenues or net income, but will decrease annual cash flow.

Integrated Coal Gasification Combined Cycle

See MANAGEMENT'S DISCUSSION AND ANALYSIS—FUTURE EARNINGS POTENTIAL—Integrated Coal Gasification Combined Cycle of Mississippi Power in Item 7 and Note 3 to the financial statements of Mississippi Power under Integrated Coal Gasification Combined Cycle in Item 8 of the Form 10-K for information regarding Mississippi Power's construction of the Kemper IGCC.

In May 2010, Mississippi Power filed a motion with the Mississippi PSC accepting the conditions contained in the Mississippi PSC order confirming Mississippi Power's application for a CPCN authorizing the acquisition, construction, and operation of the Kemper IGCC. In June 2010, the Mississippi PSC issued the CPCN (2010 MPSC Order).

In June 2010, the Sierra Club filed an appeal of the Mississippi PSC's June 2010 decision to grant the CPCN for the Kemper IGCC with the Chancery Court of Harrison County, Mississippi (Chancery Court). Subsequently, in July 2010, the Sierra Club also filed an appeal directly with the Mississippi Supreme Court. In October 2010, the Mississippi Supreme Court dismissed the Sierra Club's direct appeal. On February 28, 2011, the Chancery Court issued a judgment affirming the 2010 MPSC Order and, on March 1, 2011, the Sierra Club appealed the Chancery Court's decision to the Mississippi Supreme Court. On March 15, 2012, the Mississippi Supreme Court reversed the Chancery Court's decision and the 2010 MPSC Order and remanded the matter to the Mississippi PSC to correct the 2010 MPSC Order. The Mississippi Supreme Court concluded that the 2010 MPSC Order did not cite in sufficient detail substantial evidence upon which the Mississippi Supreme Court could determine the basis for the findings of the Mississippi PSC granting the CPCN.

On March 30, 2012, the Mississippi PSC issued temporary authorization for the continuation of construction of the Kemper IGCC until the earlier of the conclusion of the Mississippi PSC's May 2012 open meeting or immediately upon the issuance of any final order issued by the Mississippi PSC on remand that conclusively addresses the mandate. On April 24, 2012, the Mississippi PSC issued a detailed order on remand (2012 MPSC Order) confirming the CPCN for the Kemper IGCC subject to the same conditions set forth in the 2010 MPSC Order. On April 26, 2012, the Sierra Club filed a motion for stay and a notice of appeal of the 2012 MPSC Order with the Chancery Court. On May 2, 2012, Mississippi Power filed a petition to join the appeal.

The certificated cost estimate of the Kemper IGCC is \$2.4 billion, net of \$245.3 million of grants awarded to the project by the DOE under the Clean Coal Power Initiative Round 2 (CCPI2) and excluding the cost of the lignite mine and equipment and the carbon dioxide (CO₂) pipeline facilities. The 2012 MPSC Order, like the 2010 MPSC Order, (1) approved a construction cost cap of up to \$2.88 billion (exemptions from the cost cap include the cost of the lignite mine and equipment and the CO₂ pipeline facilities), (2) provided for the establishment of operational cost and revenue parameters based upon assumptions in Mississippi Power's proposal, and (3) approved financing cost recovery on CWIP balances not to exceed the certificated cost estimate, which provided for the accrual of AFUDC in 2010 and 2011 and provides for the current recovery of financing costs on 100% of CWIP in 2012, 2013, and through May 1, 2014, (provided that the amount of CWIP allowed is (i) reduced by the amount of state and federal government construction cost incentives received by Mississippi Power in excess of \$296 million to the extent that such amount increases cash flow for the pertinent regulatory period and (ii) justified by a showing that such CWIP allowance will benefit customers over the life of the plant). As of March 31, 2012, Mississippi Power had utilized substantially all of its contingency contained in the certificated cost estimate. Mississippi Power anticipates that the costs to complete construction of the portion of the Kemper IGCC subject to the construction cost cap will be less than the cost cap but will likely exceed the certificated cost estimate.

Table of Contents

MISSISSIPPI POWER COMPANY

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The Mississippi PSC order established periodic prudence reviews during the annual CWIP review process. Of the total costs incurred through March 2009, \$46 million has been reviewed and approved by the Mississippi PSC. A decision regarding the remaining \$5 million has been deferred to a later date. The timing of the review of the remaining Kemper IGCC costs has not been determined.

The Kemper IGCC plant, expected to begin commercial operation in May 2014, will use locally mined lignite (an abundant, lower heating value coal) from a mine adjacent to the plant as fuel. The mine is scheduled to be placed into service in June 2013. In conjunction with the Kemper IGCC, Mississippi Power will own the lignite mine and equipment and will acquire mineral reserves located around the plant site in Kemper County. The estimated capital cost of the mine is approximately \$245 million, of which \$79.7 million has been incurred through March 31, 2012. The asset retirement obligation associated with the reclamation and restoration of the mine currently under construction was immaterial at March 31, 2012. In May 2010, Mississippi Power executed a 40-year management fee contract with Liberty Fuels Company, LLC, a subsidiary of The North American Coal Corporation (Liberty Fuels), which will develop, construct, and manage the mining operations. The contract with Liberty Fuels is effective June 2010 through the end of the mine reclamation. On December 13, 2011, the Mississippi Department of Environmental Quality (MDEQ) approved the surface coal mining and the water pollution control permits for the mining operations operated by Liberty Fuels. On January 12, 2012, two individuals each filed a notice of appeal and a request for evidentiary hearing with the MDEQ regarding the surface coal mining and water pollution control permits. On March 8, 2012, the MDEQ permit board affirmed its issuance of the surface coal mining and water pollution control permits.

In 2009, Mississippi Power received notification from the IRS formally certifying that the IRS allocated \$133 million of Internal Revenue Code Section 48A tax credits (Phase I) to Mississippi Power. On April 19, 2011, Mississippi Power received notification from the IRS formally certifying that the IRS allocated \$279 million of Internal Revenue Code Section 48A tax credits (Phase II) to Mississippi Power. The utilization of Phase I and Phase II credits is dependent upon meeting the IRS certification requirements, including an in-service date no later than May 11, 2014 for the Phase I credits and April 19, 2016 for the Phase II credits. In order to remain eligible for the Phase II credits, Mississippi Power plans to capture and sequester (via enhanced oil recovery) at least 65% of the CO₂ produced by the Kemper IGCC during operations in accordance with the recapture rules for Section 48A investment tax credits. Through March 31, 2012, Mississippi Power received or accrued tax benefits totaling \$141.1 million for these tax credits, which will be amortized as a reduction to depreciation and amortization over the life of the Kemper IGCC. As a result of 100% bonus tax depreciation on certain assets placed, or to be placed, in service in 2011 and 2012, and the subsequent reduction in federal taxable income, Mississippi Power estimates that it will not be able to utilize \$105.0 million of these tax credits until after 2012. IRS guidelines allow the resulting unused credits to be carried forward for 20 years.

In July 2010, Mississippi Power and SMEPA entered into an asset purchase agreement whereby SMEPA agreed to purchase a 17.5% undivided interest in the Kemper IGCC. The closing of this transaction is conditioned upon execution of a joint ownership and operating agreement, receipt of all construction permits, appropriate regulatory approvals, financing, and other conditions. In December 2010, Mississippi Power and SMEPA filed a joint petition with the Mississippi PSC requesting regulatory approval of SMEPA's 17.5% undivided interest in the Kemper IGCC. On February 28, 2012, the Mississippi PSC approved the joint petition for the sale and transfer of 17.5% of the Kemper IGCC to SMEPA. On March 6, 2012, Mississippi Power received a \$150 million interest-bearing refundable deposit from SMEPA to be applied to the purchase. While the expectation is that the amount will be applied to the purchase price at closing, Mississippi Power would be required to refund the deposit upon the termination of the asset purchase agreement, within 60 days of a request by SMEPA for a full or partial refund, or within 15 days at SMEPA's discretion in the event that Mississippi Power's senior unsecured credit rating falls below a BBB+ and/or Baa1. Given the interest-bearing nature of the deposit and SMEPA's ability to request a refund, the deposit has been presented as a current liability in Mississippi Power's Condensed Balance Sheet herein and as financing proceeds in the statement of cash flows.

Table of Contents

MISSISSIPPI POWER COMPANY

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

As of March 31, 2012, Mississippi Power had spent a total of \$1.30 billion on the Kemper IGCC including the cost of the lignite mine and equipment, the CO₂ pipeline facilities, and regulatory filing costs. Of this total, \$1.28 billion was included in CWIP (which is net of \$245.3 million of CCPI2 grant funds), \$22.9 million was recorded in other regulatory assets, \$2.3 million was recorded in other deferred charges and assets, and \$1.0 million was previously expensed.

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - PSC Matters - Certificated New Plant of Mississippi Power in Item 7 and Note 3 to the financial statements of Mississippi Power under Retail Regulatory Matters - Certificated New Plant in Item 8 of the Form 10-K for information on the proposed rate schedules related to the Kemper IGCC.

The ultimate outcome of these matters cannot be determined at this time.

Income Tax Matters

Bonus Depreciation

In December 2010, the Tax Relief, Unemployment Insurance Reauthorization, and Job Creation Act of 2010 (Tax Relief Act) was signed into law. Major tax incentives in the Tax Relief Act include 100% bonus depreciation for property placed in service after September 8, 2010 and through 2011 (and for certain long-term construction projects to be placed in service in 2012) and 50% bonus depreciation for property placed in service in 2012 (and for certain long-term construction projects to be placed in service in 2013). Due to the significant amount of estimated bonus depreciation for 2012 for Southern Company, a portion of Mississippi Power's tax credit utilization will be deferred, thus eliminating the positive cash flow benefit for Mississippi Power.

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - Integrated Coal Gasification Combined Cycle herein for additional information.

Other Matters

Mississippi Power is involved in various other matters being litigated and regulatory matters that could affect future earnings. In addition, Mississippi Power is subject to certain claims and legal actions arising in the ordinary course of business. Mississippi Power's business activities are subject to extensive governmental regulation related to public health and the environment, such as regulation of air emissions and water discharges. Litigation over environmental issues and claims of various types, including property damage, personal injury, common law nuisance, and citizen enforcement of environmental requirements such as air quality and water standards, has increased generally throughout the U.S. In particular, personal injury and other claims for damages caused by alleged exposure to hazardous materials, and common law nuisance claims for injunctive relief and property damage allegedly caused by greenhouse gas and other emissions, have become more frequent. The ultimate outcome of such pending or potential litigation against Mississippi Power cannot be predicted at this time; however, for current proceedings not specifically reported herein or in Note 3 to the financial statements of Mississippi Power in Item 8 of the Form 10-K, management does not anticipate that the ultimate liabilities, if any, arising from such current proceedings would have a material effect on Mississippi Power's financial statements.

See the Notes to the Condensed Financial Statements herein for a discussion of various other contingencies, regulatory matters, and other matters being litigated which may affect future earnings potential.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

ACCOUNTING POLICIES

Application of Critical Accounting Policies and Estimates

Mississippi Power prepares its financial statements in accordance with GAAP. Significant accounting policies are described in Note 1 to the financial statements of Mississippi Power in Item 8 of the Form 10-K. In the application of these policies, certain estimates are made that may have a material impact on Mississippi Power's results of operations and related disclosures. Different assumptions and measurements could produce estimates that are significantly different from those recorded in the financial statements. See MANAGEMENT'S DISCUSSION AND ANALYSIS—ACCOUNTING POLICIES—Application of Critical Accounting Policies and Estimates of Mississippi Power in Item 7 of the Form 10-K for a complete discussion of Mississippi Power's critical accounting policies and estimates related to Electric Utility Regulation, Contingent Obligations, Unbilled Revenues, and Pension and Other Postretirement Benefits.

FINANCIAL CONDITION AND LIQUIDITY

Overview

See MANAGEMENT'S DISCUSSION AND ANALYSIS—FINANCIAL CONDITION AND LIQUIDITY—Overview of Mississippi Power in Item 7 of the Form 10-K for additional information. Mississippi Power's financial condition remained stable at March 31, 2012. Mississippi Power intends to continue to monitor its access to short-term and long-term capital markets as well as its bank credit arrangements to meet future capital and liquidity needs. See Sources of Capital, Financing Activities, and Capital Requirements and Contractual Obligations herein for additional information.

Net cash provided from operating activities totaled \$0.6 million for the first three months of 2012 compared to \$66.4 million for the corresponding period in 2011. The \$65.8 million decrease in cash provided from operating activities is primarily due to a \$16.0 million decrease in hedge settlements related to the settlement of interest rate swaps, a \$15.7 million increase in fuel inventory, and a decrease in accounts payable of \$29.1 million primarily due to timing of cash payments.

Net cash used for investing activities totaled \$344.4 million for the first three months of 2012 compared to \$52.4 million for the corresponding period in 2011. The \$292.0 million increase in net cash used for investing activities is primarily due to an increase in property additions of \$222.0 million primarily related to the Kemper IGCC, a \$50.0 million decrease in restricted cash, and a \$15.1 million decrease in capital grant proceeds related to CCPI2 and smart grid investment grants.

Net cash provided from financing activities totaled \$598.9 million for the first three months of 2012 compared to net cash used for financing activities of \$99.4 million for the corresponding period in 2011. The \$698.3 million increase in net cash provided from financing activities was primarily due to a \$100.1 million increase in capital contributions from Southern Company, the issuance of \$400.0 million of senior notes in March 2012, the receipt of a \$150.0 million interest-bearing refundable deposit related to a pending asset sale, and a \$55.0 million decrease in redemptions of long-term debt in the first quarter 2012 compared to the corresponding period in 2011.

Significant balance sheet changes for the first three months of 2012 include an increase in cash and cash equivalents of \$255.2 million primarily due to the issuance of \$400.0 million of senior notes and the receipt of a \$150.0 million interest-bearing refundable deposit from SMEPA to be applied towards its pending purchase of a 17.5% undivided interest in the Kemper IGCC. Total property, plant, and equipment increased \$361.9 million primarily due to the increase in CWIP related to the Kemper IGCC. Interest-bearing refundable deposit related to an asset sale increased \$150.0 million due to the receipt of the \$150.0 million interest-bearing refundable deposit from SMEPA. Long-term debt

Table of Contents

MISSISSIPPI POWER COMPANY

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

increased \$309.1 million primarily due to the issuance of \$400.0 million of senior notes. Paid-in capital increased \$152.2 million due to a \$150.0 million capital contribution from Southern Company.

Capital Requirements and Contractual Obligations

See MANAGEMENT'S DISCUSSION AND ANALYSIS FINANCIAL CONDITION AND LIQUIDITY Capital Requirements and Contractual Obligations of Mississippi Power in Item 7 of the Form 10-K for a description of Mississippi Power's capital requirements for its construction program, lease obligations, purchase commitments, derivative obligations, preferred stock dividends, and trust funding requirements. Approximately \$255 million will be required through March 31, 2013 to fund maturities and announced redemptions of long-term debt.

The construction program is subject to periodic review and revision, and actual construction costs may vary from these estimates because of numerous factors. These factors include: changes in business conditions; changes in load projections; storm impacts; changes in environmental statutes and regulations; the outcome of any legal challenges to environmental rules; changes in generating plants, including unit retirements and replacements and adding or changing fuel sources at existing units, to meet new regulatory requirements; changes in FERC rules and regulations; Mississippi PSC approvals; changes in legislation; the cost and efficiency of construction labor, equipment, and materials; project scope and design changes; and the cost of capital. In addition, there can be no assurance that costs related to capital expenditures will be fully recovered.

Sources of Capital

Except as described below with respect to potential DOE loan guarantees, Mississippi Power plans to obtain the funds required for construction and other purposes from sources similar to those used in the past, which were primarily funds from operating cash flows, security issuances, term loans, short-term borrowings, and equity contributions from Southern Company. However, the amount, type, and timing of any future financings, if needed, will depend upon regulatory approval, prevailing market conditions, and other factors. On February 27, 2012, Mississippi Power received a \$150 million capital contribution from Southern Company. On March 6, 2012, Mississippi Power received a \$150 million interest-bearing refundable deposit from SMEPA towards its pending purchase of a 17.5% undivided interest in the Kemper IGCC. Until the acquisition is closed, Mississippi Power has agreed to pay interest on the deposit at its AFUDC rate, which was 10.196% at March 31, 2012. While the expectation is that the amount will be applied to the purchase price at closing, Mississippi Power would be required to refund the deposit upon the termination of the asset purchase agreement, within 60 days of a request by SMEPA for a full or partial refund, or within 15 days at SMEPA's discretion in the event that Mississippi Power's senior unsecured credit rating falls below a BBB+ and/or Baa1. See MANAGEMENT'S DISCUSSION AND ANALYSIS FINANCIAL CONDITION AND LIQUIDITY Sources of Capital of Mississippi Power in Item 7 of the Form 10-K for additional information.

Mississippi Power has applied to the DOE for federal loan guarantees to finance a portion of the eligible construction costs of the Kemper IGCC. Mississippi Power is in advanced due diligence with the DOE. There can be no assurance that the DOE will issue federal loan guarantees to Mississippi Power. Mississippi Power has received \$245.3 million in DOE CCPI2 grant funds that were used for the construction of the Kemper IGCC. An additional \$25 million in CCPI2 grant funds is expected to be received for the initial operation of the Kemper IGCC. Investment tax credits related to the Kemper IGCC of \$105.0 million are not expected to be utilized until after 2012, which could result in additional financing needs.

Mississippi Power's current liabilities sometimes exceed current assets because of the continued use of short-term debt as a funding source to meet scheduled maturities of long-term debt, as well as cash needs, which can fluctuate significantly due to the seasonality of the business.

Table of Contents**MISSISSIPPI POWER COMPANY****MANAGEMENT'S DISCUSSION AND ANALYSIS OF****FINANCIAL CONDITION AND RESULTS OF OPERATIONS**

At March 31, 2012, Mississippi Power had approximately \$466.7 million of cash and cash equivalents. Committed credit arrangements with banks at March 31, 2012 were as follows:

2012	Expires		Total	Unused	Executable Term Loans		Due Within One Year ^(a)	
	2013	2014 and Beyond			One Year	Two Year	Term Out	No Term Out
	(in millions)		(in millions)		(in millions)		(in millions)	
\$106	\$25	\$165	\$296	\$296	\$25	\$41	\$66	\$65

(a) Reflects facilities expiring on or before March 31, 2013.

See Note 6 to the financial statements of Mississippi Power under Bank Credit Arrangements in Item 8 of the Form 10-K and Note (E) to the Condensed Financial Statements under Bank Credit Arrangements herein for additional information.

Most of these arrangements contain covenants that limit debt levels and typically contain cross default provisions that are restricted only to the indebtedness of Mississippi Power. Mississippi Power is currently in compliance with all such covenants. Mississippi Power expects to renew its credit arrangements, as needed, prior to expiration. These credit arrangements provide liquidity support to Mississippi Power's commercial paper borrowings and variable rate pollution control revenue bonds. The amount of variable rate pollution control revenue bonds outstanding requiring liquidity support as of March 31, 2012 was approximately \$40 million.

Mississippi Power may also meet short-term cash needs through a Southern Company subsidiary organized to issue and sell commercial paper at the request and for the benefit of Mississippi Power and the other traditional operating companies. Proceeds from such issuances for the benefit of Mississippi Power are loaned directly to Mississippi Power. The obligations of each traditional operating company under these arrangements are several and there is no cross affiliate credit support.

Mississippi Power had no commercial paper or short-term debt outstanding during the three months ended March 31, 2012.

Management believes that the need for working capital can be adequately met by utilizing commercial paper, lines of credit, and cash.

Credit Rating Risk

Mississippi Power does not have any credit arrangements with banks that would require material changes in payment schedules or terminations as a result of a credit rating downgrade. There are certain contracts that could require collateral, but not accelerated payment, in the event of a credit rating change to below BBB- and/or Baa3. These contracts are for physical electricity sales, fuel purchases, fuel transportation and storage, emissions allowances, and energy price risk management. At March 31, 2012, the maximum potential collateral requirements under these contracts at a rating below BBB- and/or Baa3 were approximately \$329 million. Included in these amounts are certain agreements that could require collateral in the event that one or more Power Pool participant has a credit rating change to below investment grade. Generally, collateral may be provided by a Southern Company guaranty, letter of credit, or cash. Mississippi Power also has entered into an asset purchase agreement with SMEPA for the pending purchase of a 17.5% undivided interest in the Kemper IGCC that could require a refund of the deposit within 15 days at SMEPA's discretion in the event that Mississippi Power's senior unsecured credit rating falls below a BBB+ and/or Baa1. Additionally, any credit rating downgrade could impact Mississippi Power's ability to access capital markets, particularly the short-term debt

market.

Table of Contents**MISSISSIPPI POWER COMPANY****MANAGEMENT'S DISCUSSION AND ANALYSIS OF****FINANCIAL CONDITION AND RESULTS OF OPERATIONS****Market Price Risk**

Mississippi Power's market risk exposure relative to interest rate changes for the first quarter 2012 has not changed materially compared with the December 31, 2011 reporting period. Since a significant portion of outstanding indebtedness is at fixed rates, Mississippi Power is not aware of any facts or circumstances that would significantly affect exposures on existing indebtedness in the near term. However, the impact on future financing costs cannot now be determined.

Due to cost-based rate regulation and other various cost recovery mechanisms, Mississippi Power continues to have limited exposure to market volatility in interest rates, foreign currency, commodity fuel prices, and prices of electricity. To mitigate residual risks relative to movements in electricity prices, Mississippi Power enters into physical fixed-price contracts or heat-rate contracts for the purchase and sale of electricity through the wholesale electricity market. Mississippi Power continues to manage retail fuel-hedging programs implemented per the guidelines of the Mississippi PSC and wholesale fuel-hedging programs under agreements with wholesale customers. As such, Mississippi Power had no material change in market risk exposure for the first quarter 2012 when compared with the December 31, 2011 reporting period.

The changes in fair value of energy-related derivative contracts, substantially all of which are composed of regulatory hedges, for the three months ended March 31, 2012 were as follows:

	First Quarter
	2012
	Changes
	Fair Value
	<i>(in millions)</i>
Contracts outstanding at the beginning of the period, assets (liabilities), net	\$(51)
Contracts realized or settled	10
Current period changes ^(a)	(15)
Contracts outstanding at the end of the period, assets (liabilities), net	\$(56)

(a) Current period changes also include the changes in fair value of new contracts entered into during the period, if any. The change in the fair value positions of the energy-related derivative contracts for the three months ended March 31, 2012 was a decrease of \$5 million, of which \$3 million related to natural gas swaps and \$2 million related to natural gas options. The change is attributable to both the volume of mmBtu and the price of natural gas. At March 31, 2012, Mississippi Power had a net hedge volume of 28 million mmBtu, which consisted of 21 million mmBtu of swaps and 7 million mmBtu of options. The weighted average swap contract cost was approximately \$2.13 per mmBtu above market prices. At December 31, 2011, Mississippi Power had a net hedge volume of 31 million mmBtu, which consisted of 22 million mmBtu of swaps and 9 million mmBtu of options. The weighted average swap contract cost was approximately \$1.98 per mmBtu above market prices. The change in option premiums is primarily attributable to the volatility of the market and the underlying change in the natural gas price. The majority of the costs associated with natural gas hedges are recovered through Mississippi Power's energy cost management clause (ECM).

Edgar Filing: ALABAMA POWER CO - Form 10-Q

Regulatory hedges relate to Mississippi Power's fuel-hedging program where gains and losses are initially recorded as regulatory liabilities and assets, respectively, and then are included in fuel expense as they are recovered through Mississippi Power's ECM.

Unrealized pre-tax gains and losses recognized in income for the three months ended March 31, 2012 and 2011 for energy-related derivative contracts that are not hedges were not material.

Table of Contents**MISSISSIPPI POWER COMPANY****MANAGEMENT'S DISCUSSION AND ANALYSIS OF****FINANCIAL CONDITION AND RESULTS OF OPERATIONS**

Mississippi Power uses over-the-counter contracts that are not exchange traded but are fair valued using prices which are market observable, and thus fall into Level 2. See Note (C) to the Condensed Financial Statements herein for further discussion on fair value measurements. The maturities of the energy-related derivative contracts and the level of the fair value hierarchy in which they fall at March 31, 2012 were as follows:

March 31, 2012				
Fair Value Measurements				
	Total	Maturity		
	Fair Value	Year 1	Years 2&3	Years 4&5
	<i>(in millions)</i>			
Level 1	\$	\$	\$	\$
Level 2	(56)	(40)	(15)	(1)
Level 3				
Fair value of contracts outstanding at end of period	\$(56)	\$(40)	\$(15)	\$(1)

The Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) enacted in July 2010 could impact the use of over-the-counter derivatives by Mississippi Power. Regulations to implement the Dodd-Frank Act could impose additional requirements on the use of over-the-counter derivatives, such as margin and reporting requirements, which could affect both the use and cost of over-the-counter derivatives. The impact, if any, cannot be determined until all relevant regulations are finalized.

For additional information, see MANAGEMENT'S DISCUSSION AND ANALYSIS FINANCIAL CONDITION AND LIQUIDITY Market Price Risk of Mississippi Power in Item 7 and Note 1 under Financial Instruments and Note 10 to the financial statements of Mississippi Power in Item 8 of the Form 10-K and Note (H) to the Condensed Financial Statements herein.

Financing Activities

In March 2012, Mississippi Power issued \$250 million aggregate principal amount of Series 2012A 4.25% Senior Notes due March 15, 2042 and an additional \$150 million aggregate principal amount of Series 2011A 2.35% Senior Notes due October 15, 2016. The Series 2011A 2.35% Senior Notes due October 15, 2016 were of the same series of notes that were originally issued in October 2011 in the aggregate principal amount of \$150 million. Upon completion of this offering, the aggregate principal amount of the outstanding Series 2011A 2.35% Senior Notes was \$300 million. The proceeds from the sale of the Series 2012A Senior Notes and the Series 2011A Senior Notes were used to repay a bank loan in an aggregate principal amount of \$75 million, and for general corporate purposes, including Mississippi Power's continuous construction program.

In March 2012, \$300 million in interest rate swaps were settled; \$250 million related to its Series 2012A 4.25% Senior Notes at a loss of approximately \$13.3 million, which will be amortized to interest expense, in earnings, over 10 years, and \$50 million related to its Series 2011A 2.35% Senior Notes at a loss of approximately \$2.7 million, which will be amortized to interest expense, in earnings, over 10 years.

Edgar Filing: ALABAMA POWER CO - Form 10-Q

On March 6, 2012, Mississippi Power received a \$150 million interest-bearing refundable deposit from SMEPA to be applied to the sale price for the pending sale of a 17.5% undivided interest in the Kemper IGCC. Until the acquisition is closed, the deposit bears interest at Mississippi Power's AFUDC rate and is refundable to SMEPA upon termination of the asset purchase agreement related to such purchase, within 60 days of a request by SMEPA for a full or partial refund, or within 15 days at SMEPA's discretion in the event that Mississippi Power's senior unsecured credit rating falls below a BBB+ and/or Baa1.

Table of Contents

MISSISSIPPI POWER COMPANY

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Subsequent to March 31, 2012, Mississippi Power announced the redemption of \$90 million aggregate principal amount of Series E 5-5/8% Senior Notes due May 1, 2033 that will occur on May 15, 2012.

In addition to any financings that may be necessary to meet capital requirements and contractual obligations, Mississippi Power plans to continue, when economically feasible, a program to retire higher-cost securities and replace these obligations with lower-cost capital if market conditions permit.

The accompanying notes as they relate to Southern Power are an integral part of these condensed financial statements.

Table of Contents**SOUTHERN POWER COMPANY AND SUBSIDIARY COMPANIES****MANAGEMENT'S DISCUSSION AND ANALYSIS OF****FINANCIAL CONDITION AND RESULTS OF OPERATIONS****FIRST QUARTER 2012 vs. FIRST QUARTER 2011****OVERVIEW**

Southern Power and its wholly-owned subsidiaries construct, acquire, own, and manage generation assets, including renewable energy projects, and sell electricity at market-based prices in the wholesale market. Southern Power continues to execute its strategy through a combination of acquiring and constructing new power plants and by entering into PPAs primarily with investor owned utilities, independent power producers, municipalities, and electric cooperatives.

To evaluate operating results and to ensure Southern Power's ability to meet its contractual commitments to customers, Southern Power focuses on several key performance indicators. These indicators include peak season equivalent forced outage rate (Peak Season EFOR), contract availability, and net income. Peak Season EFOR defines the hours during peak demand times when Southern Power's generating units are not available due to forced outages (the lower the better). Contract availability measures the percentage of scheduled hours that a unit was available. Net income is the primary measure of Southern Power's financial performance. For additional information on these indicators, see MANAGEMENT'S DISCUSSION AND ANALYSIS OVERVIEW Key Performance Indicators of Southern Power in Item 7 of the Form 10-K.

RESULTS OF OPERATIONS***Net Income*****First Quarter 2012 vs. First Quarter 2011**

<i>(change in millions)</i>	<i>(% change)</i>
\$(8.4)	(22.3)

Southern Power's net income for the first quarter 2012 was \$29.3 million compared to \$37.7 million for the corresponding period in 2011. The decrease was primarily due to a decrease in energy revenues from existing PPAs, a decrease in capacity revenues due to a reduction in total MWs of capacity under long-term contracts, and an increase in other operations and maintenance expenses. The decrease was partially offset by an increase in energy revenues from sales to affiliates under the IIC, lower fuel expenses, lower interest expenses, and lower income taxes.

Wholesale Revenues - Non-Affiliates**First Quarter 2012 vs. First Quarter 2011**

<i>(change in millions)</i>	<i>(% change)</i>
\$(56.6)	(28.7)

Wholesale energy sales to non-affiliates will vary depending on the energy demand of those customers and their generation capacity, as well as the market prices of wholesale energy compared to the cost of Southern Power's energy. Increases and decreases in revenues that are driven by fuel prices are accompanied by an increase or decrease in fuel costs and do not have a significant impact on net income.

Wholesale revenues from non-affiliates for the first quarter 2012 were \$140.6 million compared to \$197.2 million for the corresponding period in 2011. The decrease was primarily due to a \$60.5 million decrease in energy sales, reflecting a 12.3% decrease in KWH sales and a 43.3%

Edgar Filing: ALABAMA POWER CO - Form 10-Q

decrease in the average price of energy. The decrease in revenue from energy sales was partially offset by a \$3.9 million increase in capacity revenue due to an increase in the total MWs of capacity under contract with non-affiliates.

See MANAGEMENT'S DISCUSSION AND ANALYSIS FUTURE EARNINGS POTENTIAL Power Sales Agreements of Southern Power in Item 7 of the Form 10-K for additional information.

Table of Contents**SOUTHERN POWER COMPANY AND SUBSIDIARY COMPANIES****MANAGEMENT'S DISCUSSION AND ANALYSIS OF****FINANCIAL CONDITION AND RESULTS OF OPERATIONS*****Wholesale Revenues – Affiliates***

First Quarter 2012 vs. First Quarter 2011

<i>(change in millions)</i>	<i>(% change)</i>
\$28.5	34.2

Wholesale energy sales to affiliated companies within the Southern Company system will vary depending on demand and the availability and cost of generating resources at each company. Sales to affiliate companies that are not covered by PPAs are made in accordance with the IIC, as approved by the FERC.

Wholesale revenues from affiliates for the first quarter 2012 were \$111.8 million compared to \$83.3 million for the corresponding period in 2011. The increase was primarily the result of a \$41.8 million increase in energy sales under the IIC, reflecting a 314.1% increase in KWH sales, partially offset by a 43.3% reduction in the average price of energy. The increase in revenue from energy sales was partially offset by an \$11.9 million decrease in capacity revenue due to a decrease in total MWs of capacity under contract with affiliates.

See MANAGEMENT'S DISCUSSION AND ANALYSIS – FUTURE EARNINGS POTENTIAL – Power Sales Agreements of Southern Power in Item 7 of the Form 10-K for additional information.

Fuel and Purchased Power Expenses

First Quarter 2012 vs. First Quarter 2011

	<i>(change in millions)</i>	<i>(% change)</i>
Fuel	\$(13.6)	(13.3)
Purchased power – non-affiliates	11.7	130.9
Purchased power – affiliates	(12.7)	(84.5)
Total fuel and purchased power expenses	\$(14.6)	

Southern Power PPAs generally provide that the purchasers are responsible for substantially all of the cost of fuel. Consequently, any increase or decrease in fuel costs is generally accompanied by an increase or decrease in related fuel revenues and does not have a significant impact on net income. Southern Power is responsible for the cost of fuel for generating units that are not covered under PPAs. Power from these generating units is sold into the market or sold to affiliates under the IIC.

Purchased power expenses will vary depending on demand and the availability and cost of generating resources available throughout the Southern Company system and other contract resources. Load requirements are submitted to the Power Pool on an hourly basis and are fulfilled with the lowest cost alternative, whether that is generation owned by Southern Power, affiliate-owned generation, or external purchases.

In the first quarter 2012, total fuel and purchased power expenses were \$112.1 million compared to \$126.8 million for the corresponding period in 2011. Fuel and purchased power expenses decreased \$64.0 million due to a 38.8% decrease in the average cost of fuel and a 26.0% decrease in the average cost of purchased power. The decrease was partially offset by a \$49.4 million increase associated with a 39.4% increase in volume of KWHs generated and purchased.

Edgar Filing: ALABAMA POWER CO - Form 10-Q

In the first quarter 2012, fuel expense was \$89.1 million compared to \$102.7 million for the corresponding period in 2011. Fuel expense decreased \$56.0 million associated with a 38.8% decrease in the average cost of fuel. The decrease was partially offset by a \$42.4 million increase associated with a 41.3% increase in the volume of KWHs generated.

Table of Contents

SOUTHERN POWER COMPANY AND SUBSIDIARY COMPANIES

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

In the first quarter 2012, purchased power expense was \$23.0 million compared to \$24.0 million for the corresponding period in 2011. Purchased power expenses decreased \$8.0 million due to a 26.0% decrease in the average cost of purchased power, partially offset by a \$7.0 million increase associated with a 29.2% increase in the volume of KWHs purchased.

Other Operations and Maintenance Expenses

First Quarter 2012 vs. First Quarter 2011

<i>(change in millions)</i>	<i>(% change)</i>
\$5.7	13.2

In the first quarter 2012, other operations and maintenance expenses were \$48.4 million compared to \$42.7 million for the corresponding period in 2011. The increase was primarily due to a \$3.4 million increase in administrative and general expenses primarily due to increases in business development expenses and affiliate service company expense allocated based on load and fuel burn and a \$1.8 million increase related to a scheduled outage at Plant Rowan.

Interest Expense, Net of Amounts Capitalized

First Quarter 2012 vs. First Quarter 2011

<i>(change in millions)</i>	<i>(% change)</i>
\$(5.2)	(27.5)

In the first quarter 2012, interest expense, net of amounts capitalized was \$13.6 million compared to \$18.8 million for the corresponding period in 2011. The decrease was primarily due to a \$2.2 million expense reduction associated with the refinancing of \$575 million in long-term debt in 2011 and a \$2.3 million increase in capitalized interest associated with the construction of the Cleveland County combustion turbine generating plant and the Nacogdoches biomass plant. See FUTURE EARNINGS POTENTIAL — Construction Projects herein for additional information.

Income Taxes

First Quarter 2012 vs. First Quarter 2011

<i>(change in millions)</i>	<i>(% change)</i>
\$(7.4)	(35.6)

In the first quarter 2012, income taxes were \$13.4 million compared to \$20.8 million for the corresponding period in 2011. The decrease was primarily due to lower pre-tax earnings.

FUTURE EARNINGS POTENTIAL

Edgar Filing: ALABAMA POWER CO - Form 10-Q

The results of operations discussed above are not necessarily indicative of Southern Power's future earnings potential. The level of Southern Power's future earnings depends on numerous factors that affect the opportunities, challenges, and risks of Southern Power's competitive wholesale business. These factors include: Southern Power's ability to achieve sales growth while containing costs; regulatory matters; creditworthiness of customers; total generating capacity available in Southern Power's target market areas; the successful remarketing of capacity as current contracts expire; and Southern Power's ability to execute its acquisition strategy and to construct generating facilities. Other factors that could influence future earnings include weather, demand, generation patterns, and operational limitations. General economic conditions have lowered demand and have negatively impacted capacity revenues under Southern Power's PPAs where the amounts purchased are based on demand. Southern Power is unable to predict whether demand under these PPAs will return to pre-recession levels. The timing and extent of the economic recovery is uncertain and will impact future earnings. For additional information relating to these issues, see RISK FACTORS in Item 1A and MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL of Southern Power in Item 7 of the Form 10-K.

Table of Contents

SOUTHERN POWER COMPANY AND SUBSIDIARY COMPANIES

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Environmental Matters

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - Environmental Matters of Southern Power in Item 7 of the Form 10-K for information on the development by federal and state environmental regulatory agencies of additional control strategies for emissions of air pollution from industrial sources, including electric generating facilities. Compliance with possible additional federal or state legislation or regulations related to global climate change, air quality, or other environmental and health concerns could also significantly affect Southern Power. While Southern Power's PPAs generally contain provisions that permit charging the counterparty with some of the new costs incurred as a result of changes in environmental laws and regulations, the full impact of any such regulatory or legislative changes cannot be determined at this time.

Climate Change Litigation

Hurricane Katrina Case

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - Environmental Matters - Climate Change Litigation - Hurricane Katrina Case of Southern Power in Item 7 and Note 3 to the financial statements of Southern Power under Climate Change Litigation - Hurricane Katrina Case in Item 8 of the Form 10-K for additional information. On March 20, 2012, the U.S. District Court for the Southern District of Mississippi dismissed the amended class action complaint filed on May 27, 2011 by the plaintiffs. On April 16, 2012, the plaintiffs appealed the case to the U.S. Court of Appeals for the Fifth Circuit. The ultimate outcome of this matter cannot be determined at this time.

Global Climate Issues

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - Environmental Matters - Global Climate Issues of Southern Power in Item 7 of the Form 10-K for additional information. On April 13, 2012, the EPA published proposed regulations to establish standards of performance for greenhouse gas emissions from new fossil fuel steam electric generating units. As proposed, the standards would not apply to existing units. The EPA has delayed its plans to propose greenhouse gas emissions performance standards for modified sources and emissions guidelines for existing sources. The impact of this rulemaking will depend on the scope and specific requirements of the final rule and the outcome of any legal challenges and, therefore, cannot be determined at this time.

Income Tax Matters

Bonus Depreciation

In December 2010, the Tax Relief, Unemployment Insurance Reauthorization, and Job Creation Act of 2010 (Tax Relief Act) was signed into law. Major tax incentives in the Tax Relief Act include 100% bonus depreciation for property placed in service after September 8, 2010 and through 2011 (and for certain long-term construction projects to be placed in service in 2012) and 50% bonus depreciation for property placed in service in 2012 (and for certain long-term construction projects to be placed in service in 2013), which will have a positive impact on the future cash flows of Southern Power through 2013. Consequently, Southern Power's positive cash flow benefit is estimated to be between \$140 million and \$185 million in 2012.

Table of Contents

SOUTHERN POWER COMPANY AND SUBSIDIARY COMPANIES

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Construction Projects

Cleveland County Units 1-4

In 2008, Southern Power announced that it will build an electric generating plant in Cleveland County, North Carolina. The plant will consist of four combustion turbine natural gas generating units with a total generating capacity of 720 MWs. The units are expected to begin commercial operation in December 2012. Construction costs incurred through March 31, 2012 were \$277.4 million. The total estimated cost of the project is expected to be between \$335 million and \$365 million.

Nacogdoches Biomass Plant

In 2009, Southern Power acquired all of the outstanding membership interests of Nacogdoches Power, LLC (Nacogdoches) from American Renewables LLC, the original developer of the project. Nacogdoches is constructing a biomass generating plant in Sacul, Texas with an estimated capacity of 100 MWs. The generating plant will be fueled from wood waste. Construction commenced in 2009 and the plant is expected to begin commercial operation in June 2012. Construction costs incurred through March 31, 2012 were \$406.4 million. The total estimated cost of the project is expected to be between \$470 million and \$490 million.

Power Sales Agreements

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FUTURE EARNINGS POTENTIAL - Power Sales Agreements of Southern Power in Item 7 of the Form 10-K for additional information regarding Southern Power's PPAs with investor-owned utilities, independent power purchasers, municipalities, and electric cooperatives.

In June 2011, Southern Power entered into three PPAs with Georgia Power subject to Georgia PSC and FERC approval. These PPAs were approved by the Georgia PSC on March 20, 2012 and are still subject to approval by the FERC. The ultimate outcome of this matter cannot be determined at this time.

Other Matters

Southern Power is involved in various other matters being litigated and regulatory matters that could affect future earnings. In addition, Southern Power is subject to certain claims and legal actions arising in the ordinary course of business. Southern Power's business activities are subject to extensive governmental regulation related to public health and the environment, such as regulation of air emissions and water discharges. Litigation over environmental issues and claims of various types, including property damage, personal injury, common law nuisance, and citizen enforcement of environmental requirements such as air quality and water standards, has increased generally throughout the U.S. In particular, personal injury and other claims for damages caused by alleged exposure to hazardous materials, and common law nuisance claims for injunctive relief and property damage allegedly caused by greenhouse gas and other emissions, have become more frequent. The ultimate outcome of such pending or potential litigation against Southern Power and its subsidiaries cannot be predicted at this time; however, for current proceedings not specifically reported herein or in Note 3 to the financial statements of Southern Power in Item 8 of the Form 10-K, management does not anticipate that the ultimate liabilities, if any, arising from such current proceedings would have a material effect on Southern Power's financial statements.

See the Notes to the Condensed Financial Statements herein for a discussion of various other contingencies and other matters being litigated which may affect future earnings potential.

SOUTHERN POWER COMPANY AND SUBSIDIARY COMPANIES

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

ACCOUNTING POLICIES

Application of Critical Accounting Policies and Estimates

Southern Power prepares its consolidated financial statements in accordance with GAAP. Significant accounting policies are described in Note 1 to the financial statements of Southern Power in Item 8 of the Form 10-K. In the application of these policies, certain estimates are made that may have a material impact on Southern Power's results of operations and related disclosures. Different assumptions and measurements could produce estimates that are significantly different from those recorded in the financial statements. See MANAGEMENT'S DISCUSSION AND ANALYSIS ACCOUNTING POLICIES Application of Critical Accounting Policies and Estimates of Southern Power in Item 7 of the Form 10-K for a complete discussion of Southern Power's critical accounting policies and estimates related to Revenue Recognition, Impairment of Long Lived Assets and Intangibles, Acquisition Accounting, Contingent Obligations, Depreciation, and Convertible Investment Tax Credits (ITCs).

FINANCIAL CONDITION AND LIQUIDITY

Overview

Southern Power's financial condition remained stable at March 31, 2012. Southern Power intends to continue to monitor its access to short-term and long-term capital markets as well as its bank credit arrangements as needed to meet future capital and liquidity needs. See Sources of Capital herein for additional information on lines of credit.

Net cash provided from operating activities totaled \$44.2 million for the first three months of 2012 compared to \$105.9 million for the corresponding period in 2011. This decrease was mainly due to the effect of cash received in 2011 for convertible ITCs. Net cash used for investing activities totaled \$47.7 million for the first three months of 2012 compared to \$84.7 million for the corresponding period in 2011. This decrease was primarily due to a decrease in CWIP expenditures related to construction activities at Cleveland County and Nacogdoches. Net cash used for financing activities totaled \$10.5 million for the first three months of 2012 compared to \$29.0 million for the corresponding period in 2011. This decrease was primarily due to a net repayment of notes payable in 2011 compared to an increase in notes payable in 2012, partially offset by a decrease in capital contributions from Southern Company and an increase in dividends paid.

Significant asset changes in the balance sheet for the first quarter 2012 include: a \$14.0 million decrease in cash and cash equivalents; a \$10.9 million decrease in accounts receivables from affiliated companies primarily due to a decrease in the amount due for energy sales under the IIC; a \$13.9 million increase in prepaid income taxes; a \$71.5 million increase in CWIP due to Cleveland County and Nacogdoches construction activities and capital equipment replacements during outages in progress; and a \$12.3 million decrease in prepaid long-term service agreements due to costs incurred related to scheduled plant maintenance.

Significant liability and stockholder's equity changes in the balance sheet for the first quarter 2012 include: a \$20.2 million increase in notes payable non-affiliated primarily due to the timing of operating cash flows; a \$20.8 million decrease in accounts payable affiliated primarily due to timing of payments to service company affiliates; a \$10.2 million decrease in accrued interest due to scheduled debt service; and a \$16.0 million decrease in deferred capacity revenues affiliated due to seasonality.

Table of Contents

SOUTHERN POWER COMPANY AND SUBSIDIARY COMPANIES

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Capital Requirements and Contractual Obligations

See MANAGEMENT'S DISCUSSION AND ANALYSIS - FINANCIAL CONDITION AND LIQUIDITY - Capital Requirements and Contractual Obligations of Southern Power in Item 7 of the Form 10-K for a description of Southern Power's capital requirements for its construction program, scheduled maturities of long-term debt, interest, leases, derivative obligations, purchase commitments, and long-term service agreements. There are no requirements through March 31, 2013 to fund maturities of long-term debt.

The construction program is subject to periodic review and revision; these amounts include estimates for potential plant acquisitions and new construction as well as ongoing capital improvements and work to be performed under long-term service agreements. Planned expenditures for plant acquisitions may vary due to market opportunities and Southern Power's ability to execute its growth strategy. Actual construction costs may vary from these estimates because of changes in factors such as: business conditions; environmental statutes and regulations; FERC rules and regulations; load projections; legislation; the cost and efficiency of construction labor, equipment, and materials; project scope and design changes; and the cost of capital.

Sources of Capital

Southern Power may use operating cash flows, external funds, or equity capital or loans from Southern Company to finance any new projects, acquisitions, and ongoing capital requirements. Southern Power expects to generate external funds from the issuance of unsecured senior debt and commercial paper or utilization of credit arrangements from banks. However, the amount, type, and timing of any future financings, if needed, will depend upon prevailing market conditions, regulatory approval, and other factors. See MANAGEMENT'S DISCUSSION AND ANALYSIS - FINANCIAL CONDITION AND LIQUIDITY - Sources of Capital of Southern Power in Item 7 of the Form 10-K for additional information.

Southern Power's current liabilities frequently exceed current assets due to the use of short-term debt as a funding source, as well as cash needs which can fluctuate significantly due to the seasonality of the business. To meet liquidity and capital resource requirements, Southern Power had at March 31, 2012 cash and cash equivalents of approximately \$3.0 million and a committed credit facility of \$500 million (Facility) expiring in 2016. The Facility contains a covenant that limits the ratio of debt to capitalization (each as defined in the Facility) to a maximum of 65% and contains a cross default provision that is restricted only to the indebtedness of Southern Power. Southern Power is currently in compliance with all such covenants. Proceeds from this Facility may be used for working capital and general corporate purposes as well as liquidity support for Southern Power's commercial paper program. See Note 6 to the financial statements of Southern Power under Bank Credit Arrangements in Item 8 of the Form 10-K and Note (E) to the Condensed Financial Statements under Bank Credit Arrangements herein for additional information.

Southern Power's commercial paper program is used to finance acquisition and construction costs related to electric generating facilities and for general corporate purposes.

Table of Contents**SOUTHERN POWER COMPANY AND SUBSIDIARY COMPANIES****MANAGEMENT'S DISCUSSION AND ANALYSIS OF****FINANCIAL CONDITION AND RESULTS OF OPERATIONS**

Details of short-term borrowings were as follows:

	Short-term Debt at the End of the Period		Short-term Debt During the Period ^(a)		
	Amount Outstanding	Weighted Average Interest Rate	Average Outstanding	Weighted Average Interest Rate	Maximum Amount Outstanding
	(in millions)		(in millions)		(in millions)
March 31, 2012:					
Commercial paper	\$200	0.5%	\$193	0.4%	\$226

(a) Average and maximum amounts are based upon daily balances during the period.

Management believes that the need for working capital can be adequately met by utilizing the commercial paper program, the line of credit, and cash.

Credit Rating Risk

Southern Power does not have any credit arrangements that would require material changes in payment schedules or terminations as a result of a credit rating downgrade. There are certain contracts that could require collateral, but not accelerated payment, in the event of a credit rating change to BBB and Baa2, or BBB- and/or Baa3 or below. These contracts are for physical electricity purchases and sales, fuel transportation and storage, and energy price risk management.

The maximum potential collateral requirements under these contracts at March 31, 2012 were as follows:

Credit Ratings	Maximum Potential Collateral Requirements
	(in millions)
At BBB and Baa2	\$ 9
At BBB- and/or Baa3	454
Below BBB- and/or Baa3	1,218

Included in these amounts are certain agreements that could require collateral in the event that one or more Power Pool participant has a credit rating change to below investment grade. Generally, collateral may be provided by a Southern Company guaranty, letter of credit, or cash. Additionally, any credit rating downgrade could impact Southern Power's ability to access capital markets, particularly the short-term debt market.

Edgar Filing: ALABAMA POWER CO - Form 10-Q

In addition, through the acquisition of Plant Rowan, Southern Power assumed a PPA with North Carolina Municipal Power Agency No. 1 that could require collateral, but not accelerated payment, in the event of a downgrade of Southern Power's credit. The PPA requires credit assurances without stating a specific credit rating. The amount of collateral required would depend upon actual losses, if any, resulting from a credit downgrade.

Table of Contents**SOUTHERN POWER COMPANY AND SUBSIDIARY COMPANIES****MANAGEMENT'S DISCUSSION AND ANALYSIS OF****FINANCIAL CONDITION AND RESULTS OF OPERATIONS****Market Price Risk**

Southern Power is exposed to market risks, including changes in interest rates, certain energy-related commodity prices, and, occasionally, currency exchange rates. To manage the volatility attributable to these exposures, Southern Power takes advantage of natural offsets and enters into various derivative transactions for the remaining exposures pursuant to Southern Power's policies in areas such as counterparty exposure and risk management practices. Southern Power's policy is that derivatives are to be used primarily for hedging purposes and mandates strict adherence to all applicable risk management policies. Derivative positions are monitored using techniques including, but not limited to, market valuation, value at risk, stress tests, and sensitivity analysis.

Southern Power's market risk exposure relative to interest rate changes for the first quarter 2012 has not changed materially compared with the December 31, 2011 reporting period. Since a significant portion of outstanding indebtedness bears interest at fixed rates, Southern Power is not aware of any facts or circumstances that would significantly affect exposure on existing indebtedness in the near term. However, the impact on future financing costs cannot now be determined.

Because energy from Southern Power's facilities is primarily sold under long-term PPAs with tolling agreements and provisions shifting substantially all of the responsibility for fuel cost to the counterparties, Southern Power's exposure to market volatility in commodity fuel prices and prices of electricity is generally limited. However, Southern Power has been and may continue to be exposed to market volatility in energy-related commodity prices as a result of sales of uncontracted generating capacity.

The changes in fair value of energy-related derivative contracts for the three months ended March 31, 2012 were as follows:

	First Quarter
	2012
	Changes
	Fair Value
	<i>(in millions)</i>
Contracts outstanding at the beginning of the period, assets (liabilities), net	\$ (9.2)
Contracts realized or settled	0.8
Current period changes ^(a)	(7.7)
Contracts outstanding at the end of the period, assets (liabilities), net	\$ (16.1)

(a) Current period changes also include the changes in fair value of new contracts entered into during the period, if any. The decrease in the fair value positions of the energy-related derivative contracts for the three months ended March 31, 2012 was \$6.9 million, which is due to both power and natural gas positions. This change is attributable to both the volume and prices of power and natural gas as follows:

	March 31,	December 31,
	2012	2011
Power net purchased or (sold)		
MWHs <i>(in millions)</i>	(0.1)	0.1
Weighted average contract cost per MWH above (below) market prices <i>(in dollars)</i>	\$(5.20)	\$(1.04)
Natural gas net purchased		
Commodity million mmBtu	28.2	8.3
Commodity weighted average contract cost per mmBtu above (below) market prices <i>(in dollars)</i>	\$1.57	\$1.18

Table of Contents**SOUTHERN POWER COMPANY AND SUBSIDIARY COMPANIES****MANAGEMENT'S DISCUSSION AND ANALYSIS OF****FINANCIAL CONDITION AND RESULTS OF OPERATIONS**

The fair value of energy-related derivative contracts by hedge designation reflected in the financial statements as assets (liabilities) consists of the following:

	March 31, December 31,	
Asset (Liability) Derivatives	2012	2011
	<i>(in millions)</i>	
Cash flow hedges	\$ (1.2)	\$ (0.8)
Not designated	(14.9)	(8.4)
Total fair value	\$ (16.1)	\$ (9.2)

Gains and losses on energy-related derivatives used by Southern Power to hedge anticipated purchases and sales are initially deferred in OCI before being recognized in income in the same period as the hedged transaction. Gains and losses on energy-related derivative contracts that are not designated or fail to qualify as hedges are recognized in the statements of income as incurred.

Total net unrealized pre-tax gains (losses) recognized in the statements of income for the three months ended March 31, 2012 for energy-related derivative contracts that were not hedges were \$(6.5) million and will continue to be marked to market until the settlement date. Included in this amount are gains (losses) on derivative contracts reimbursable by third parties in the amount of \$(5.2) million. For the three months ended March 31, 2011, the total net unrealized pre-tax gains (losses) recognized in the statements of income for energy-related derivative contracts that were not hedges were not material.

Southern Power uses over-the-counter contracts that are not exchange traded but are fair valued using prices which are market observable, and thus fall into Level 2. See Note (C) to the Condensed Financial Statements herein for further discussion on fair value measurements. The maturities of the energy-related derivative contracts and the level of the fair value hierarchy in which they fall at March 31, 2012 were as follows:

	March 31, 2012			
	Fair Value Measurements			
	Total	Maturity		
	Fair Value	Year 1	Years 2&3	Years 4&5
	<i>(in millions)</i>			
Level 1	\$	\$	\$	\$
Level 2	(16.1)	(16.3)	(0.2)	0.4
Level 3				
Fair value of contracts outstanding at end of period	\$ (16.1)	\$ (16.3)	\$ (0.2)	\$ 0.4

Edgar Filing: ALABAMA POWER CO - Form 10-Q

The Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) enacted in July 2010 could impact the use of over-the-counter derivatives by Southern Power. Regulations to implement the Dodd-Frank Act could impose additional requirements on the use of over-the-counter derivatives, such as margin and reporting requirements, which could affect both the use and cost of over-the-counter derivatives. The impact, if any, cannot be determined until all relevant regulations are finalized.

For additional information, see MANAGEMENT'S DISCUSSION AND ANALYSIS FINANCIAL CONDITION AND LIQUIDITY Market Price Risk of Southern Power in Item 7 and Note 1 under Financial Instruments and Note 9 to the financial statements of Southern Power in Item 8 of the Form 10-K and Note (H) to the Condensed Financial Statements herein.

SOUTHERN POWER COMPANY AND SUBSIDIARY COMPANIES

MANAGEMENT'S DISCUSSION AND ANALYSIS OF

FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Financing Activities

For the three months ended March 31, 2012, Southern Power did not issue or redeem any long-term securities.

During the three months ended March 31, 2012, Southern Power prepaid \$0.2 million of long-term debt.

In addition to any financings that may be necessary to meet capital requirements and contractual obligations, Southern Power plans to continue, when economically feasible, a program to retire higher-cost securities and replace these obligations with lower-cost capital if market conditions permit.

NOTES TO THE CONDENSED FINANCIAL STATEMENTS:

(A) INTRODUCTION

The condensed quarterly financial statements of each registrant included herein have been prepared by such registrant, without audit, pursuant to the rules and regulations of the SEC. The Condensed Balance Sheets as of December 31, 2011 have been derived from the audited financial statements of each registrant. In the opinion of each registrant's management, the information regarding such registrant furnished herein reflects all adjustments, which, except as otherwise disclosed, are of a normal recurring nature, necessary to present fairly the results of operations for the periods ended March 31, 2012 and 2011. Certain information and footnote disclosures normally included in annual financial statements prepared in accordance with GAAP have been condensed or omitted pursuant to such rules and regulations, although each registrant believes that the disclosures regarding such registrant are adequate to make the information presented not misleading. Disclosures which would substantially duplicate the disclosures in the Form 10-K and details which have not changed significantly in amount or composition since the filing of the Form 10-K are generally omitted from this Quarterly Report on Form 10-Q. Therefore, these Condensed Financial Statements should be read in conjunction with the financial statements and the notes thereto included in the Form 10-K. Due to the seasonal variations in the demand for energy, operating results for the periods presented are not necessarily indicative of the operating results to be expected for the full year.

Certain prior years' data presented in the financial statements have been reclassified to conform to the current year presentation.

Investments in Leveraged Leases

See Note 1 to the financial statements of Southern Company under "Leveraged Leases" in Item 8 of the Form 10-K for additional information.

The recent financial and operational performance of one of Southern Company's lessees and the associated generation assets has raised potential concerns on the part of Southern Company as to the credit quality of the lessee and the residual value of the assets. Southern Company is currently engaged in discussions with the lessee and the holders of the project's nonrecourse debt to restructure the debt payments and the related rental payments to allow additional capital investment in the project to be made to improve the operation of the generation assets and the financial viability of the lease transaction. Southern Company continues to monitor the performance of the underlying assets and to evaluate the ability of the lessee to continue to make the required lease payments. If the attempts at restructuring the project are unsuccessful and the project is ultimately abandoned, the potential impairment loss that would be incurred is approximately \$90 million on an after-tax basis. The ultimate outcome of this matter cannot be determined at this time.

(B) CONTINGENCIES AND REGULATORY MATTERS

See Note 3 to the financial statements of the registrants in Item 8 of the Form 10-K for information relating to various lawsuits, other contingencies, and regulatory matters.

Table of Contents**NOTES TO THE CONDENSED FINANCIAL STATEMENTS: (Continued)****General Litigation Matters**

Each registrant is subject to certain claims and legal actions arising in the ordinary course of business. In addition, business activities of Southern Company's subsidiaries are subject to extensive governmental regulation related to public health and the environment, such as regulation of air emissions and water discharges. Litigation over environmental issues and claims of various types, including property damage, personal injury, common law nuisance, and citizen enforcement of environmental requirements such as air quality and water standards, has increased generally throughout the U.S. In particular, personal injury and other claims for damages caused by alleged exposure to hazardous materials, and common law nuisance claims for injunctive relief and property damage allegedly caused by greenhouse gas and other emissions, have become more frequent. The ultimate outcome of such pending or potential litigation against each registrant and any subsidiaries cannot be predicted at this time; however, for current proceedings not specifically reported herein or in Note 3 to the financial statements of each registrant in Item 8 of the Form 10-K, management does not anticipate that the ultimate liabilities, if any, arising from such current proceedings would have a material effect on such registrant's financial statements.

Environmental Matters***New Source Review Actions***

In 1999, the EPA brought a civil action in the U.S. District Court for the Northern District of Georgia against certain Southern Company subsidiaries, including Alabama Power and Georgia Power, alleging that these subsidiaries had violated the NSR provisions of the Clean Air Act and related state laws at certain coal-fired generating facilities. The EPA alleged NSR violations at five coal-fired generating facilities operated by Alabama Power, including a unit co-owned by Mississippi Power, and three coal-fired generating facilities operated by Georgia Power, including a unit co-owned by Gulf Power. The civil action sought penalties and injunctive relief, including an order requiring installation of the best available control technology at the affected units. The case against Georgia Power (including claims related to the unit co-owned by Gulf Power) was administratively closed in 2001 and has not been reopened. After Alabama Power was dismissed from the original action, the EPA filed a separate action in 2001 against Alabama Power (including claims related to the unit co-owned by Mississippi Power) in the U.S. District Court for the Northern District of Alabama.

In 2006, the U.S. District Court for the Northern District of Alabama entered a consent decree, resolving claims relating to the alleged NSR violations at Plant Miller. In September 2010, the EPA dismissed five of its eight remaining claims against Alabama Power, leaving only three claims, including one relating to the unit co-owned by Mississippi Power. On March 14, 2011, the U.S. District Court for the Northern District of Alabama granted Alabama Power summary judgment on all remaining claims and dismissed the case with prejudice. That judgment is on appeal to the U.S. Court of Appeals for the Eleventh Circuit. On February 23, 2012, the EPA filed a motion in the U.S. District Court for the Northern District of Alabama seeking vacatur of the judgment and recusal of the judge in the case involving Alabama Power (including claims related to a unit co-owned by Mississippi Power). At the same time, the EPA asked the U.S. Court of Appeals for the Eleventh Circuit to stay its appeal of the judgment in favor of Alabama Power. Alabama Power filed oppositions to the EPA's motion and its request for a stay. On March 29, 2012, the U.S. Court of Appeals for the Eleventh Circuit denied the EPA's request to stay its appeal. The U.S. District Court for the Northern District of Alabama has not ruled on the EPA's motion seeking vacatur of the judgment.

Southern Company and each traditional operating company believe each such traditional operating company complied with applicable laws and regulations in effect at the time the work in question took place. The Clean Air Act authorizes maximum civil penalties of \$25,000 to \$37,500 per day, per violation, depending on the date of the alleged violation. An adverse outcome could require substantial capital expenditures that cannot be determined at this time and could possibly require payment of substantial penalties. Such expenditures could affect future results of operations, cash flows, and financial condition if such costs are not recovered through regulated rates. The ultimate outcome of these matters cannot be determined at this time.

Table of Contents**NOTES TO THE CONDENSED FINANCIAL STATEMENTS: (Continued)*****Climate Change Litigation******Kivalina Case***

In 2008, the Native Village of Kivalina and the City of Kivalina filed a lawsuit in the U.S. District Court for the Northern District of California against several electric utilities (including Southern Company), several oil companies, and a coal company. The plaintiffs allege that the village is being destroyed by erosion allegedly caused by global warming that the plaintiffs attribute to emissions of greenhouse gases by the defendants. The plaintiffs assert claims for public and private nuisance and contend that some of the defendants (including Southern Company) acted in concert and are therefore jointly and severally liable for the plaintiffs' damages. The suit seeks damages for lost property values and for the cost of relocating the village, which is alleged to be \$95 million to \$400 million. In 2009, the U.S. District Court for the Northern District of California granted the defendants' motions to dismiss the case. The plaintiffs appealed the dismissal to the U.S. Court of Appeals for the Ninth Circuit. Southern Company believes that these claims are without merit. While Southern Company believes the likelihood of loss is remote based on existing case law, it is not possible to predict with certainty whether Southern Company will incur any liability in connection with this matter. The ultimate outcome of this matter cannot be determined at this time.

Hurricane Katrina Case

In 2005, immediately following Hurricane Katrina, a lawsuit was filed in the U.S. District Court for the Southern District of Mississippi by Ned Comer on behalf of Mississippi residents seeking recovery for property damage and personal injuries caused by Hurricane Katrina. In 2006, the plaintiffs amended the complaint to include Southern Company and many other electric utilities, oil companies, chemical companies, and coal producers. The plaintiffs allege that the defendants contributed to climate change, which contributed to the intensity of Hurricane Katrina. In 2007, the U.S. District Court for the Southern District of Mississippi dismissed the case. On appeal to the U.S. Court of Appeals for the Fifth Circuit, a three-judge panel reversed the U.S. District Court for the Southern District of Mississippi, holding that the case could proceed, but, on rehearing, the full U.S. Court of Appeals for the Fifth Circuit dismissed the plaintiffs' appeal, resulting in reinstatement of the decision of the U.S. District Court for the Southern District of Mississippi in favor of the defendants. On May 27, 2011, the plaintiffs filed an amended version of their class action complaint, arguing that the earlier dismissal was on procedural grounds and under Mississippi law the plaintiffs have a right to re-file. The amended complaint was also filed against numerous chemical, coal, oil, and utility companies, including Alabama Power, Georgia Power, Gulf Power, and Southern Power. On March 20, 2012, the U.S. District Court for the Southern District of Mississippi dismissed the plaintiffs' amended complaint. On April 16, 2012, the plaintiffs appealed the case to the U.S. Court of Appeals for the Fifth Circuit. Each Southern Company entity named in the lawsuit believes that these claims are without merit. While each Southern Company entity named in the lawsuit believes the likelihood of loss is remote based on existing case law, it is not possible to predict with certainty whether any Southern Company entity named in the lawsuit will incur any liability in connection with this matter. The ultimate outcome of this matter cannot be determined at this time.

Environmental Remediation

The Southern Company system must comply with environmental laws and regulations that cover the handling and disposal of waste and releases of hazardous substances. Under these various laws and regulations, the Southern Company system could incur substantial costs to clean up properties. The traditional operating companies have each received authority from their respective state PSCs to recover approved environmental compliance costs through regulatory mechanisms. These rates are adjusted annually or as necessary within limits approved by the state PSCs.

Georgia Power's environmental remediation liability as of March 31, 2012 was \$20 million. Georgia Power has been designated or identified as a potentially responsible party (PRP) at sites governed by the Georgia Hazardous Site Response Act and/or by the federal Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), including a large site in Brunswick, Georgia on the CERCLA National Priorities List (NPL). The parties have completed the removal of wastes from the Brunswick site as ordered by the EPA. Additional cleanup and claims for recovery of natural resource damages at this site or for the assessment and potential cleanup of other sites on the Georgia Hazardous Sites Inventory and the CERCLA NPL are anticipated.

Table of Contents

NOTES TO THE CONDENSED FINANCIAL STATEMENTS: (Continued)

In 2008, the EPA advised Georgia Power that it has been designated as a PRP at the Ward Transformer Superfund site located in Raleigh, North Carolina. Numerous other entities have also received notices regarding this site from the EPA.

On September 29, 2011, the EPA issued a unilateral administrative order (UAO) to Georgia Power and 22 other parties, ordering specific remedial action of certain areas at the Ward Transformer Superfund site. Georgia Power does not believe it is a liable party under CERCLA based on its alleged connection to the site. As a result, on November 7, 2011, Georgia Power filed a response with the EPA indicating that Georgia Power is not willing to undertake the work set forth in the UAO because Georgia Power has sufficient cause to believe it is not a liable party. On November 22, 2011, the EPA sent Georgia Power a letter stating that the EPA does not consider Georgia Power to be in compliance with the UAO. The EPA also stated that it is considering enforcement options against Georgia Power and other UAO recipients who are not complying with the UAO.

The EPA may seek to enforce the UAO in court pursuant to its enforcement authority under CERCLA and may seek recovery of its costs in undertaking the UAO work. If the court determines that a respondent failed to comply with the UAO without sufficient cause, the EPA may also seek civil penalties of up to \$37,500 per day for the violation and punitive damages of up to three times the costs incurred by the EPA as a result of the party's failure to comply with the UAO.

In addition to the EPA's action at the Ward Transformer Superfund site, in 2009, Georgia Power, along with many other parties, was sued by several existing PRPs for cost recovery for a removal action that is currently taking place. Georgia Power and numerous other defendants moved for a dismissal of these lawsuits. The court denied the dismissal of the lawsuits in March 2010 but granted Georgia Power's motion regarding the dismissal of the claim pertaining to the plaintiffs' joint and several liability.

The ultimate outcome of the Brunswick CERCLA NPL and Ward Transformer Superfund site matters will depend upon the success of defenses asserted, the ultimate number of PRPs participating in the cleanup, and numerous other factors and cannot be determined at this time; however, as a result of the regulatory treatment, it is not expected to have a material impact on Southern Company's or Georgia Power's financial statements.

Gulf Power's environmental remediation liability includes estimated costs of environmental remediation projects of approximately \$60 million as of March 31, 2012. These estimated costs relate to site closure criteria by the Florida Department of Environmental Protection (FDEP) for potential impacts to soil and groundwater from herbicide applications at Gulf Power substations. The schedule for completion of the remediation projects will be subject to FDEP approval. The projects have been approved by the Florida PSC for recovery through Gulf Power's environmental cost recovery clause; therefore, there was no impact on net income as a result of these estimates.

In 2003, the Texas Commission on Environmental Quality (TCEQ) designated Mississippi Power as a potentially responsible party at a site in Texas. The site was owned by an electric transformer company that handled Mississippi Power's transformers as well as those of many other entities. The site owner is bankrupt and the State of Texas has entered into an agreement with Mississippi Power and several other utilities to investigate and remediate the site. The feasibility study/presumptive remedy document was originally filed with TCEQ in June 2011 and remains under consideration by the agency. Amounts expensed and accrued related to this work were not material. Hundreds of entities have received notices from the TCEQ requesting their participation in the anticipated site remediation. The final impact of this matter on Mississippi Power will depend upon further environmental assessment and the ultimate number of potentially responsible parties. The remediation expenses incurred by Mississippi Power are expected to be recovered through the ECO Plan.

The final outcome of these matters cannot be determined at this time. However, based on the currently known conditions at these sites and the nature and extent of activities relating to these sites, management of Southern Company, Georgia Power, Gulf Power, and Mississippi Power does not believe that additional liabilities, if any, at these sites would be material to their respective financial statements.

Table of Contents

NOTES TO THE CONDENSED FINANCIAL STATEMENTS: (Continued)

Nuclear Fuel Disposal Cost Litigation

Alabama Power and Georgia Power have contracts with the U.S., acting through the DOE, that provide for the permanent disposal of spent nuclear fuel. The DOE failed to begin disposing of spent nuclear fuel in 1998 as required by the contracts, and Alabama Power and Georgia Power are pursuing legal remedies against the government for breach of contract.

In 2007, the U.S. Court of Federal Claims awarded Georgia Power approximately \$30 million, based on its ownership interests, and awarded Alabama Power approximately \$17 million, representing substantially all of the Southern Company system's direct costs of the expansion of spent nuclear fuel storage facilities at Plants Farley and Hatch and Plant Vogtle Units 1 and 2 from 1998 through 2004.

In 2008, the government filed an appeal and, on March 11, 2011, the U.S. Court of Appeals for the Federal Circuit issued an order in which it affirmed the damage award to Alabama Power, but remanded the Georgia Power portion of the proceeding back to the U.S. Court of Federal Claims for reconsideration of the damages amount in light of the spent nuclear fuel acceptance rates adopted in a separate proceeding by the U.S. Court of Appeals for the Federal Circuit. On July 12, 2011, the court entered final judgment in favor of Alabama Power and awarded Alabama Power approximately \$17 million. In April 2012, the award was credited to cost of service for the benefit of Alabama Power customers.

On April 5, 2012, Georgia Power and the government entered into a stipulation to conclude this litigation, which provided for judgment in favor of Georgia Power and awarded Georgia Power approximately \$27 million in damages, based on its ownership interests. On April 5, 2012, the stipulation was approved by the U.S. Court of Federal Claims. The proceeds will be credited to the Georgia Power accounts where the original costs were charged and will be used to reduce rate base, fuel, and cost of service for the benefit of Georgia Power customers.

In 2008, a second claim against the government was filed for damages incurred after December 31, 2004 (the court-mandated cut-off in the original claim) due to the government's alleged continuing breach of contract. The complaint does not contain any specific dollar amount for recovery of damages. Damages will continue to accumulate until the issue is resolved or the storage is provided. No amounts have been recognized in the financial statements as of March 31, 2012 for the second claim. The final outcome of this matter cannot be determined at this time.

Sufficient pool storage capacity for spent fuel is available at Plant Vogtle Units 1 and 2 to maintain full-core discharge capability for both units into 2014. Construction of an on-site dry storage facility at Plant Vogtle Units 1 and 2 is expected to begin in sufficient time to maintain pool full-core discharge capability. At Plants Hatch and Farley, on-site dry spent fuel storage facilities are operational and can be expanded to accommodate spent fuel through the expected life of each plant.

FERC Matters

See Note 3 to the financial statements of Mississippi Power under "FERC Matters" in Item 8 of the Form 10-K for additional information regarding Mississippi Power's request for revised rates related to the wholesale Municipal and Rural Associations (MRA) cost-based electric tariff. See Note 3 to the financial statements of Southern Company and of Mississippi Power under "Integrated Coal Gasification Combined Cycle" in Item 8 of the Form 10-K for information regarding Mississippi Power's construction of the Kemper IGCC.

On January 20, 2012, Mississippi Power reached a settlement agreement with its wholesale customers, which was executed by all parties on March 9, 2012. The settlement agreement provides that base rates under the cost-based electric tariff will increase by approximately \$22.6 million over a 12-month period with revised rates effective April 1, 2012. In 2012, the amount of base rate revenues to be received from the agreed upon increase will be approximately \$17.0 million. On March 12, 2012, Mississippi Power filed an unopposed motion to place wholesale MRA interim rates into effect pending approval of the settlement agreement between the parties by the FERC. On March 28, 2012, the FERC approved the motion to place interim rates into effect beginning in May 2012. Approval of the settlement agreement by the FERC has been delayed until later in the year.

The ultimate outcome of this matter cannot be determined at this time.

Table of Contents

NOTES TO THE CONDENSED FINANCIAL STATEMENTS: (Continued)

Retail Regulatory Matters

Georgia Power

Fuel Cost Recovery

See Note 3 to the financial statements of Southern Company and Georgia Power under Retail Regulatory Matters Georgia Power Fuel Cost Recovery and Retail Regulatory Matters Fuel Cost Recovery, respectively, in Item 8 of the Form 10-K for additional information.

As of March 31, 2012, Georgia Power had a total over recovered fuel cost balance of approximately \$22 million compared to an under recovered balance of \$137 million at December 31, 2011. The over recovered fuel costs at March 31, 2012 are included in other deferred credits and liabilities on Southern Company's and Georgia Power's Condensed Balance Sheets herein. The under recovered fuel costs at December 31, 2011 are included in current assets on Southern Company's and Georgia Power's Condensed Balance Sheets herein. Fuel cost recovery revenues as recorded on the financial statements are adjusted for differences in actual recoverable fuel costs and amounts billed in current regulated rates. Accordingly, any changes in the billing factor will not have a significant effect on Southern Company's or Georgia Power's revenues or net income, but will affect cash flow.

On March 30, 2012, Georgia Power filed a request with the Georgia PSC to decrease fuel rates by 19%, which is expected to reduce annual billings by \$567 million. The decrease in fuel costs is driven primarily by lower natural gas prices as a result of increased natural gas supplies. The Georgia PSC is scheduled to vote on this matter on June 21, 2012. As proposed, the rate decrease would become effective July 1, 2012; however, Georgia Power is currently working with the Georgia PSC to potentially implement the proposed decrease effective June 1, 2012. The ultimate outcome of this matter cannot be determined at this time.

2011 Integrated Resource Plan Update

See Note 3 to the financial statements of Southern Company and Georgia Power under Retail Regulatory Matters Georgia Power 2011 Integrated Resource Plan Update and Retail Regulatory Matters 2011 Integrated Resource Plan Update, respectively, in Item 8 of the Form 10-K for additional information.

On March 20, 2012, the Georgia PSC approved Georgia Power's request to decertify and retire two coal-fired generation units at Plant Branch as of October 31, 2013 and December 31, 2013 and an oil-fired unit at Plant Mitchell as of March 26, 2012, which was included in Georgia Power's 2011 IRP Update. The Georgia PSC also approved three PPAs totaling 998 MWs with Southern Power for capacity and energy that will commence in 2015 and end in 2030. The PPAs remain subject to FERC approval. The ultimate outcome of this matter cannot be determined at this time.

Nuclear Construction

See Note 3 to the financial statements of Southern Company and Georgia Power under Retail Regulatory Matters Georgia Power Nuclear Construction and Construction Nuclear, respectively, in Item 8 of the Form 10-K for additional information regarding Georgia Power's construction of Plant Vogtle Units 3 and 4.

On February 16, 2012, a group of petitioners who had intervened in the NRC's combined construction and operating licenses (COLs) proceedings for Plant Vogtle Units 3 and 4 filed a petition in the U.S. Court of Appeals for the District of Columbia Circuit seeking judicial review and a stay of the NRC's issuance of the COLs. In addition, on February 16, 2012, another group of petitioners filed a petition with the U.S. Court of Appeals for the District of Columbia Circuit seeking judicial review of the NRC's certification of the Westinghouse Design Certification Document, as amended (DCD). On April 3, 2012, the U.S. Court of Appeals for the District of Columbia Circuit granted a motion filed by these two groups of petitioners to consolidate their challenges. On April 18, 2012, another group of petitioners filed a motion to stay the effectiveness of the order issuing the COLs for Plant Vogtle Units 3 and 4 with the U.S. District Court for the

Table of Contents

NOTES TO THE CONDENSED FINANCIAL STATEMENTS: (Continued)

District of Columbia. Georgia Power has filed a motion to intervene in these proceedings and intends to vigorously contest these petitions.

In 2009, the Georgia PSC voted to certify construction of Plant Vogtle Units 3 and 4. In addition, the Georgia PSC voted to approve inclusion of the related CWIP accounts in rate base. Also in 2009, the Governor of the State of Georgia signed into law the Georgia Nuclear Energy Financing Act that allows Georgia Power to recover financing costs for nuclear construction projects by including the related CWIP accounts in rate base during the construction period. With respect to Plant Vogtle Units 3 and 4, this legislation allows Georgia Power to recover projected financing costs of approximately \$1.7 billion during the construction period beginning in 2011, which reduces the projected in-service cost to approximately \$4.4 billion. The Georgia PSC has ordered Georgia Power to report against this total certified cost of approximately \$6.1 billion. In addition, in December 2010, the Georgia PSC approved Georgia Power's NCCR tariff. The NCCR tariff became effective January 1, 2011 and adjustments are filed with the Georgia PSC on November 1 of each year to become effective on January 1 of the following year. Georgia Power is collecting and amortizing to earnings approximately \$91 million of financing costs, capitalized in 2009 and 2010, over the five-year period ending December 31, 2015, in addition to the ongoing financing costs. At March 31, 2012, approximately \$68 million of these 2009 and 2010 costs remained in CWIP.

Georgia Power, Oglethorpe Power Corporation, the Municipal Electric Authority of Georgia, and the City of Dalton, Georgia, an incorporated municipality in the State of Georgia acting by and through its Board of Water, Light, and Sinking Fund Commissioners (collectively, Owners) and Westinghouse and Stone & Webster, Inc. (collectively, Consortium) have established both informal and formal dispute resolution procedures in accordance with the engineering, procurement, and construction agreement to design, engineer, procure, construct, and test two AP1000 nuclear units with electric generating capacity of approximately 1,100 MWs each and related facilities, structures, and improvements at Plant Vogtle entered into by the parties (Vogtle 3 and 4 Agreement) in order to resolve issues arising during the course of constructing a project of this magnitude. The Consortium and Georgia Power (on behalf of the Owners) have successfully initiated both formal and informal claims through these procedures, including ongoing claims, to resolve disputes and expect to resolve any existing and future disputes through these procedures as well.

During the course of construction activities, issues have arisen that may impact the project budget and schedule, including costs associated with design changes to the DCD, and costs associated with delays in the project schedule related to the timing of approval of the DCD and issuance of the COLs. The Owners and the Consortium have begun negotiations regarding these issues, including the assertion by the Consortium that the Owners are responsible for these costs under the terms of the Vogtle 3 and 4 Agreement. In preliminary discussions, the Consortium has provided its initial estimate of its proposed adjustment to the contract price. The Consortium's estimated adjustment attributable to Georgia Power (based on Georgia Power's ownership interest) is approximately \$400 million (in 2008 dollars) with respect to these issues, which include an initial estimate of costs for efforts to maintain the projected in-service dates of 2016 and 2017 for Plant Vogtle Units 3 and 4, respectively. Georgia Power has not agreed with the amount of these proposed adjustments or that the Owners have responsibility for any costs related to these issues. Georgia Power expects negotiations with the Consortium to continue over the next several months during which time the parties will attempt to reach a mutually acceptable compromise of their positions. If a compromise cannot be reached, formal dispute resolution, including litigation, may follow. Georgia Power intends to vigorously defend its positions. If these costs are imposed upon the Owners, Georgia Power would seek an amendment to the certified cost of Plant Vogtle Units 3 and 4, if necessary. Additional claims by the Consortium or Georgia Power (on behalf of the Owners) are expected to arise throughout the construction of Plant Vogtle Units 3 and 4.

In addition, there are processes in place to assure compliance with the design requirements specified in the DCD and the COLs, including rigorous inspection by Southern Nuclear and the NRC that occurs throughout construction. A recent routine NRC inspection identified that certain details of the rebar construction in the Plant Vogtle Unit 3 nuclear island were not consistent with the DCD. Georgia Power expects to receive official notice of these findings from the NRC. Georgia Power, on behalf of the Owners, is currently engaged in constructive discussions with the Consortium to identify appropriate corrective actions. Various inspection issues are expected as construction proceeds.

Table of Contents

NOTES TO THE CONDENSED FINANCIAL STATEMENTS: (Continued)

There are pending technical and procedural challenges to the construction and licensing of Plant Vogtle Units 3 and 4, including legal challenges to the NRC issuance of the COLs and certification of the DCD. Similar additional challenges at the state and federal level are expected as construction proceeds.

The ultimate outcome of these matters cannot be determined at this time.

Other Construction

See Note 3 to the financial statements of Southern Company and Georgia Power under Retail Regulatory Matters Georgia Power Other Construction and Construction Other Construction, respectively, in Item 8 of the Form 10-K for additional information.

Georgia Power placed Plant McDonough Unit 5 into service on April 26, 2012. Plant McDonough Unit 6 is expected to be placed into service in November 2012. Plant McDonough Unit 1 was retired on February 29, 2012.

Gulf Power

Retail Base Rate Case

See Note 3 to the financial statements of Gulf Power under Retail Regulatory Matters Retail Base Rate Case in Item 8 of the Form 10-K for additional information.

On March 12, 2012, the Florida PSC approved a permanent increase in retail base rates and charges of \$64 million effective April 11, 2012. The amount of the permanent increase includes the previously approved \$38.5 million interim retail rate increase implemented in September 2011. The Florida PSC's decision on the amount of the permanent increase also included a determination that none of the base rate revenues collected on an interim basis would be refunded. Gulf Power's authorized retail ROE is a range of 9.25% to 11.25% with new retail base rates set at the midpoint retail ROE of 10.25%. In addition, the Florida PSC also approved a step increase to Gulf Power's retail base rates and charges of \$4 million to be effective in January 2013. On April 18, 2012, Gulf Power filed a motion to reconsider one aspect of the decision dealing with property acquired as a potential site for a future generating plant. If the motion is granted, the previously approved rates would be increased by an additional \$2 million. The ultimate outcome of this matter cannot be determined at this time.

Cost Recovery Clauses

See Note 3 to the financial statements of Gulf Power under Retail Regulatory Matters Cost Recovery Clauses in Item 8 of the Form 10-K for additional information.

Fuel Cost Recovery

See Notes 1 and 3 to the financial statements of Gulf Power under Revenues and Retail Regulatory Matters Fuel Cost Recovery, respectively, in Item 8 of the Form 10-K for additional information.

Over recovered fuel costs at March 31, 2012 totaled \$28.8 million compared to \$9.9 million at December 31, 2011. These amounts are included in other regulatory liabilities, current on Gulf Power's Condensed Balance Sheets herein.

Purchased Power Capacity Recovery

See Notes 1 and 3 to the financial statements of Gulf Power under Revenues and Retail Regulatory Matters Purchased Power Capacity Recovery, respectively, in Item 8 of the Form 10-K for additional information.

Over recovered purchased power capacity costs at March 31, 2012 totaled \$9.6 million compared to \$8.0 million at December 31, 2011. These amounts are included in other regulatory liabilities, current on Gulf Power's Condensed Balance Sheets herein.

Table of Contents

NOTES TO THE CONDENSED FINANCIAL STATEMENTS: (Continued)

Environmental Cost Recovery

See Note 3 to the financial statements of Gulf Power under Retail Regulatory Matters Environmental Cost Recovery in Item 8 of the Form 10-K for additional information.

Over recovered environmental costs at March 31, 2012 totaled \$4.0 million compared to \$10.0 million at December 31, 2011. These amounts are included in other regulatory liabilities, current on Gulf Power's Condensed Balance Sheets herein.

On April 3, 2012, the Mississippi PSC approved Mississippi Power's request for a CPCN to construct a flue gas desulfurization system (scrubber) on Plant Daniel Units 1 and 2. These units are jointly owned by Mississippi Power and Gulf Power, with 50% ownership each. The estimated total cost of the project is approximately \$660 million, excluding AFUDC, and it is scheduled for completion in December 2015.

Energy Conservation Cost Recovery

See Note 3 to the financial statements of Gulf Power under Retail Regulatory Matters Energy Conservation Cost Recovery in Item 8 of the Form 10-K for additional information.

Under recovered energy conservation costs at March 31, 2012 totaled \$2.0 million compared to \$3.1 million at December 31, 2011. These amounts are included in under recovered regulatory clause revenues on Gulf Power's Condensed Balance Sheets herein.

Mississippi Power

Performance Evaluation Plan

See Note 3 to the financial statements of Mississippi Power under Retail Regulatory Matters Performance Evaluation Plan in Item 8 of the Form 10-K for additional information regarding Mississippi Power's base rates.

On April 2, 2012, Mississippi Power filed a motion to suspend the 2011 PEP lookback filing. Unresolved matters related to certain costs included in the 2010 PEP lookback filing also impact the 2011 PEP lookback filing, making it impractical to determine Mississippi Power's actual retail return on investment for 2011 for purposes of the 2011 PEP lookback filing. The ultimate outcome of these matters cannot be determined at this time.

System Restoration Rider

See Note 3 to the financial statements of Mississippi Power under Retail Regulatory Matters System Restoration Rider in Item 8 of the Form 10-K for additional information.

On February 2, 2012, Mississippi Power submitted its 2012 System Restoration Rider (SRR) rate filing with the Mississippi PSC, which proposed that the 2012 SRR rate level remain at zero and Mississippi Power be allowed to accrue approximately \$3.7 million to the property damage reserve in 2012. On April 3, 2012, the filing was approved by the Mississippi PSC.

Table of Contents

NOTES TO THE CONDENSED FINANCIAL STATEMENTS: (Continued)

Environmental Compliance Overview Plan

See Note 3 to the financial statements of Mississippi Power under **Retail Regulatory Matters** **Environmental Compliance Overview Plan** in Item 8 of the Form 10-K for information on Mississippi Power's annual environmental filing with the Mississippi PSC.

On April 3, 2012, the Mississippi PSC approved Mississippi Power's request for a CPCN to construct a flue gas desulfurization system (scrubber) on Plant Daniel Units 1 and 2. These units are jointly owned by Mississippi Power and Gulf Power, with 50% ownership each. The estimated total cost of the project is approximately \$660 million, with Mississippi Power's portion being \$330 million, excluding AFUDC. The project is scheduled for completion in December 2015. Mississippi Power's portion of the cost is expected to be recovered through the ECO Plan. As of March 31, 2012, total project expenditures were \$55.6 million, with Mississippi Power's portion being \$27.8 million.

On February 14, 2012, Mississippi Power submitted its 2012 ECO Plan notice, which proposed a 0.3% increase in annual revenues for Mississippi Power. In compliance with the CPCN to construct scrubbers on Plant Daniel Units 1 and 2, Mississippi Power will revise the 2012 ECO Plan notice excluding scrubber expenditures from rate base, which is expected to result in little or no rate change.

The ultimate outcome of these matters cannot be determined at this time.

Fuel Cost Recovery

See Note 3 to the financial statements of Mississippi Power under **Retail Regulatory Matters** **Fuel Cost Recovery** in Item 8 of the Form 10-K for information regarding Mississippi Power's fuel cost recovery.

At March 31, 2012, the amount of over recovered retail fuel costs included in Mississippi Power's Condensed Balance Sheets herein was \$50.9 million compared to \$42.4 million at December 31, 2011. Mississippi Power also has a wholesale MRA and a Market Based (MB) fuel cost recovery factor. At March 31, 2012, the amount of over recovered wholesale MRA and MB fuel costs included in Mississippi Power's Condensed Balance Sheets herein was \$18.1 million and \$2.4 million, respectively, compared to \$14.3 million and \$2.2 million, respectively, at December 31, 2011. In addition, at March 31, 2012 and December 31, 2011, the amount of over recovered MRA emissions allowance cost included in Mississippi Power's Condensed Balance Sheets herein was \$1.7 million. Mississippi Power's operating revenues are adjusted for differences in actual recoverable fuel cost and amounts billed in accordance with the currently approved cost recovery rate. Accordingly, this decrease to the billing factors will have no significant effect on Mississippi Power's revenues or net income, but will decrease annual cash flow.

Integrated Coal Gasification Combined Cycle

See Note 3 to the financial statements of Southern Company and Mississippi Power under **Integrated Coal Gasification Combined Cycle** in Item 8 of the Form 10-K for information regarding Mississippi Power's construction of the Kemper IGCC.

In May 2010, Mississippi Power filed a motion with the Mississippi PSC accepting the conditions contained in the Mississippi PSC order confirming Mississippi Power's application for a CPCN authorizing the acquisition, construction, and operation of the Kemper IGCC. In June 2010, the Mississippi PSC issued the CPCN (2010 MPSC Order).

In June 2010, the Sierra Club filed an appeal of the Mississippi PSC's June 2010 decision to grant the CPCN for the Kemper IGCC with the Chancery Court of Harrison County, Mississippi (Chancery Court). Subsequently, in July 2010, the Sierra Club also filed an appeal directly with the Mississippi Supreme Court. In October 2010, the Mississippi Supreme Court dismissed the Sierra Club's direct appeal. On February 28, 2011, the Chancery Court issued a judgment affirming the 2010 MPSC Order and, on March 1, 2011, the Sierra Club appealed the Chancery Court's decision to the Mississippi Supreme Court. On March 15, 2012, the Mississippi Supreme Court reversed the Chancery Court's decision and the 2010 MPSC Order and remanded the matter to the Mississippi PSC to correct the 2010 MPSC Order. The Mississippi Supreme Court concluded that the 2010 MPSC Order did not cite in sufficient

Table of Contents

NOTES TO THE CONDENSED FINANCIAL STATEMENTS: (Continued)

detail substantial evidence upon which the Mississippi Supreme Court could determine the basis for the findings of the Mississippi PSC granting the CPCN.

On March 30, 2012, the Mississippi PSC issued temporary authorization for the continuation of construction of the Kemper IGCC until the earlier of the conclusion of the Mississippi PSC's May 2012 open meeting or immediately upon the issuance of any final order issued by the Mississippi PSC on remand that conclusively addresses the mandate. On April 24, 2012, the Mississippi PSC issued a detailed order on remand (2012 MPSC Order) confirming the CPCN for the Kemper IGCC subject to the same conditions set forth in the 2010 MPSC Order. On April 26, 2012, the Sierra Club filed a motion for stay and a notice of appeal of the 2012 MPSC Order with the Chancery Court. On May 2, 2012, Mississippi Power filed a petition to join the appeal.

The certificated cost estimate of the Kemper IGCC is \$2.4 billion, net of \$245.3 million of grants awarded to the project by the DOE under the Clean Coal Power Initiative Round 2 (CCPI2) and excluding the cost of the lignite mine and equipment and the carbon dioxide (CO₂) pipeline facilities. The 2012 MPSC Order, like the 2010 MPSC Order, (1) approved a construction cost cap of up to \$2.88 billion (exemptions from the cost cap include the cost of the lignite mine and equipment and the CO₂ pipeline facilities), (2) provided for the establishment of operational cost and revenue parameters based upon assumptions in Mississippi Power's proposal, and (3) approved financing cost recovery on CWIP balances not to exceed the certificated cost estimate, which provided for the accrual of AFUDC in 2010 and 2011 and provides for the current recovery of financing costs on 100% of CWIP in 2012, 2013, and through May 1, 2014, (provided that the amount of CWIP allowed is (i) reduced by the amount of state and federal government construction cost incentives received by Mississippi Power in excess of \$296 million to the extent that such amount increases cash flow for the pertinent regulatory period and (ii) justified by a showing that such CWIP allowance will benefit customers over the life of the plant). As of March 31, 2012, Mississippi Power had utilized substantially all of its contingency contained in the certificated cost estimate. Mississippi Power anticipates that the costs to complete construction of the portion of the Kemper IGCC subject to the construction cost cap will be less than the cost cap but will likely exceed the certificated cost estimate.

The Mississippi PSC order established periodic prudence reviews during the annual CWIP review process. Of the total costs incurred through March 2009, \$46 million has been reviewed and approved by the Mississippi PSC. A decision regarding the remaining \$5 million has been deferred to a later date. The timing of the review of the remaining Kemper IGCC costs has not been determined.

The Kemper IGCC plant, expected to begin commercial operation in May 2014, will use locally mined lignite (an abundant, lower heating value coal) from a mine adjacent to the plant as fuel. The mine is scheduled to be placed into service in June 2013. In conjunction with the Kemper IGCC, Mississippi Power will own the lignite mine and equipment and will acquire mineral reserves located around the plant site in Kemper County. The estimated capital cost of the mine is approximately \$245 million, of which \$79.7 million has been incurred through March 31, 2012. The asset retirement obligation associated with the reclamation and restoration of the mine currently under construction was immaterial at March 31, 2012. In May 2010, Mississippi Power executed a 40-year management fee contract with Liberty Fuels Company, LLC, a subsidiary of The North American Coal Corporation (Liberty Fuels), which will develop, construct, and manage the mining operations. The contract with Liberty Fuels is effective June 2010 through the end of the mine reclamation. On December 13, 2011, the Mississippi Department of Environmental Quality (MDEQ) approved the surface coal mining and the water pollution control permits for the mining operations operated by Liberty Fuels. On January 12, 2012, two individuals each filed a notice of appeal and a request for evidentiary hearing with the MDEQ regarding the surface coal mining and water pollution control permits. On March 8, 2012, the MDEQ permit board affirmed its issuance of the surface coal mining and water pollution control permits.

In 2009, Mississippi Power received notification from the IRS formally certifying that the IRS allocated \$133 million of Internal Revenue Code Section 48A tax credits (Phase I) to Mississippi Power. On April 19, 2011, Mississippi Power received notification from the IRS formally certifying that the IRS allocated \$279 million of Internal Revenue Code Section 48A tax credits (Phase II) to Mississippi Power. The utilization of Phase I and Phase II credits is dependent upon meeting the IRS certification requirements, including an in-service date no later than May 11, 2014 for the Phase I credits and April 19, 2016 for the Phase II credits. In order to remain eligible for the Phase II credits, Mississippi Power plans to capture and sequester (via enhanced oil recovery) at least 65% of the CO₂ produced by the Kemper IGCC during operations in accordance with the recapture rules for Section 48A investment tax credits. Through March 31, 2012, Mississippi Power received or accrued tax benefits totaling \$141.1 million for these tax credits, which will be amortized as a reduction to depreciation and amortization over the life of the Kemper IGCC. As a result of 100% bonus tax depreciation on certain assets placed, or to be placed, in service in 2011 and 2012, and the subsequent reduction in federal

Table of Contents

NOTES TO THE CONDENSED FINANCIAL STATEMENTS: (Continued)

taxable income, Mississippi Power estimates that it will not be able to utilize \$105.0 million of these tax credits until after 2012. IRS guidelines allow the resulting unused credits to be carried forward for 20 years.

In July 2010, Mississippi Power and SMEPA entered into an asset purchase agreement whereby SMEPA agreed to purchase a 17.5% undivided interest in the Kemper IGCC. The closing of this transaction is conditioned upon execution of a joint ownership and operating agreement, receipt of all construction permits, appropriate regulatory approvals, financing, and other conditions. In December 2010, Mississippi Power and SMEPA filed a joint petition with the Mississippi PSC requesting regulatory approval of SMEPA's 17.5% undivided interest in the Kemper IGCC. On February 28, 2012, the Mississippi PSC approved the joint petition for the sale and transfer of 17.5% of the Kemper IGCC to SMEPA. On March 6, 2012, Mississippi Power received a \$150 million interest-bearing refundable deposit from SMEPA to be applied to the purchase. While the expectation is that the amount will be applied to the purchase price at closing, Mississippi Power would be required to refund the deposit upon the termination of the asset purchase agreement, within 60 days of a request by SMEPA for a full or partial refund, or within 15 days at SMEPA's discretion in the event that Mississippi Power's senior unsecured credit rating falls below a BBB+ and/or Baa1. Given the interest-bearing nature of the deposit and SMEPA's ability to request a refund, the deposit has been presented as a current liability in Mississippi Power's Condensed Balance Sheet herein and as financing proceeds in the statement of cash flows.

As of March 31, 2012, Mississippi Power had spent a total of \$1.30 billion on the Kemper IGCC including the cost of the lignite mine and equipment, the CO₂ pipeline facilities, and regulatory filing costs. Of this total, \$1.28 billion was included in CWIP (which is net of \$245.3 million of CCPI2 grant funds), \$22.9 million was recorded in other regulatory assets, \$2.3 million was recorded in other deferred charges and assets, and \$1.0 million was previously expensed.

See Note 3 to the financial statements of Mississippi Power under "Retail Regulatory Matters - Certificated New Plant" in Item 8 of the Form 10-K for information on the proposed rate schedules related to the Kemper IGCC.

The ultimate outcome of these matters cannot be determined at this time.

Table of Contents**NOTES TO THE CONDENSED FINANCIAL STATEMENTS: (Continued)****(C) FAIR VALUE MEASUREMENTS**

As of March 31, 2012, assets and liabilities measured at fair value on a recurring basis during the period, together with the level of the fair value hierarchy in which they fall, were as follows:

- (c) Includes the investment securities pledged to creditors and cash collateral received, and excludes receivables related to investment income, pending investment sales, and payables related to pending investment purchases and the securities lending program. As of March 31, 2012, approximately \$41 million of the fair market value of Georgia Power's nuclear decommissioning trust funds' securities were on loan and pledged to creditors under the funds' managers' securities lending program.
- (d) Level 1 securities consist of actively traded stocks, while Level 2 securities consist of pooled funds.

Table of Contents

NOTES TO THE CONDENSED FINANCIAL STATEMENTS: (Continued)

Valuation Methodologies

The energy-related derivatives primarily consist of over-the-counter financial products for natural gas and physical power products including, from time to time, basis swaps. These are standard products used within the energy industry and are valued using the market approach. The inputs used are mainly from observable market sources, such as forward natural gas prices, power prices, implied volatility, and LIBOR interest rates. Interest rate and foreign currency derivatives are also standard over-the-counter financial products valued using the market approach. Inputs for interest rate derivatives include LIBOR interest rates, interest rate futures contracts, and occasionally implied volatility of interest rate options. Inputs for foreign currency derivatives are from observable market sources. See Note (H) herein for additional information on how these derivatives are used.

Other investments include investments in funds that are valued using the market approach and income approach. Securities that are traded in the open market are valued at the closing price on their principal exchange as of the measurement date. Discounts are applied in accordance with GAAP when certain trading restrictions exist. For investments that are not traded in the open market, the price paid will have been determined based on market factors including comparable multiples and the expectations regarding cash flows and business plan execution. As the investments mature or if market conditions change materially, further analysis of the fair market value of the investment is performed. This analysis is typically based on a metric, such as multiple of earnings, revenues, earnings before interest and income taxes, or earnings adjusted for certain cash changes. These multiples are based on comparable multiples for publicly traded companies or other relevant prior transactions.

For fair value measurements of investments within the nuclear decommissioning trusts and rabbi trust funds, specifically the fixed income assets using significant other observable inputs and unobservable inputs, the primary valuation technique used is the market approach. External pricing vendors are designated for each of the asset classes in the nuclear decommissioning trusts and rabbi trust funds with each security discriminately assigned a primary pricing source, based on similar characteristics.

A market price secured from the primary source vendor is then used in the valuation of the assets within the trusts. As a general approach, market pricing vendors gather market data (including indices and market research reports) and integrate relative credit information, observed market movements, and sector news into proprietary pricing models, pricing systems, and mathematical tools. Dealer quotes and other market information including live trading levels and pricing analysts' judgment are also obtained when available.

Table of Contents**NOTES TO THE CONDENSED FINANCIAL STATEMENTS: (Continued)**

As of March 31, 2012, the fair value measurements of investments calculated at net asset value per share (or its equivalent), as well as the nature and risks of those investments, were as follows:

As of March 31, 2012:	Fair Value	Unfunded Commitments	Redemption Frequency	Redemption Notice Period

Money market funds	439	None	Daily	Not applicable

The NRC requires licensees of commissioned nuclear power reactors to establish a plan for providing reasonable assurance of funds for future decommissioning. Alabama Power and Georgia Power have external trust funds (the Funds) to comply with the NRC's regulations. The commingled funds in the nuclear decommissioning trusts are invested primarily in a diversified portfolio of high grade money market instruments, including, but not limited to, commercial paper, notes, repurchase agreements, and other evidences of indebtedness with a maturity not exceeding 13 months from the date of purchase. The commingled funds will, however, maintain a dollar-weighted average portfolio maturity of 90 days or less. The assets may be longer term investment grade fixed income obligations having a maximum five-year final maturity with put features or floating rates with a reset date of 13 months or less. The primary objective for the commingled funds is a high level of current income consistent with stability of principal and liquidity. The corporate bonds commingled funds represent the investment of cash collateral received

Edgar Filing: ALABAMA POWER CO - Form 10-Q

under the Funds' managers' securities lending program that can only be sold upon the return of the loaned securities. See Note 1 to the financial statements of Southern Company and Georgia Power under "Nuclear Decommissioning" in Item 8 of the Form 10-K for additional information.

Alabama Power's nuclear decommissioning trust includes investments in Trust-Owned Life Insurance (TOLI). The taxable nuclear decommissioning trust invests in the TOLI in order to minimize the impact of taxes on the portfolio and can draw on the value of the TOLI through death proceeds, loans against the cash surrender value, and/or the cash surrender value, subject to legal restrictions. The amounts reported in the table above reflect the fair value of investments the insurer has made in relation to the TOLI agreements. The nuclear decommissioning trust does not own the underlying investments, but the fair value of the investments approximates the cash surrender value of the TOLI policies. The investments made by the insurer are in commingled funds. The commingled funds primarily include investments in domestic and international equity securities and predominantly high-quality fixed income securities. These fixed income securities may include U.S. Treasury and government agency fixed income securities,

Table of Contents**NOTES TO THE CONDENSED FINANCIAL STATEMENTS: (Continued)**

non-U.S. government and agency fixed income securities, domestic and foreign corporate fixed income securities, and, to some degree, mortgage and asset backed securities. The passively managed funds seek to replicate the performance of a related index. The actively managed funds seek to exceed the performance of a related index through security analysis and selection.

Southern Company, Alabama Power, and Georgia Power continue to elect the option to fair value investment securities held in the nuclear decommissioning trust funds. For the three months ended March 31, 2012, the increase in fair value of the funds, which includes reinvested interest and dividends, is recorded in the regulatory liability and was \$86 million for Southern Company, \$49 million for Alabama Power, and \$37 million for Georgia Power.

The money market funds are short-term investments of excess funds in various money market mutual funds, which are portfolios of short-term debt securities. The money market funds are regulated by the SEC and typically receive the highest rating from credit rating agencies. Regulatory and rating agency requirements for money market funds include minimum credit ratings and maximum maturities for individual securities and a maximum weighted average portfolio maturity. Redemptions are available on a same day basis up to the full amount of the investment in the money market funds.

At March 31, 2012, other financial instruments for which the carrying amount did not equal fair value were as follows:

	Carrying Amount	Fair Value
	<i>(in millions)</i>	
Long-term debt:		
Southern Company	\$20,843	\$25,499
Alabama Power	\$ 6,380	\$ 7,789
Georgia Power	\$ 8,918	\$11,837
Gulf Power	\$ 1,236	\$ 1,349
Mississippi Power	\$ 1,668	\$ 1,740
Southern Power	\$ 1,303	\$ 1,393

The fair values were Level 2 and are based on quoted market prices for the same or similar issues or on the current rates offered to Southern Company, Alabama Power, Georgia Power, Gulf Power, Mississippi Power, and Southern Power.

(D) STOCKHOLDERS EQUITY**Earnings per Share**

For Southern Company, the only difference in computing basic and diluted earnings per share is attributable to awards outstanding under the stock option and performance share plans. See Note 8 to the financial statements of Southern Company in Item 8 of the Form 10-K for information on the stock option and performance share plans. The effects of both stock options and performance share award units were determined using the treasury stock method. Shares used to compute diluted earnings per share were as follows:

Three Months Ended	Three Months Ended
-------------------------------	-------------------------------

Edgar Filing: ALABAMA POWER CO - Form 10-Q

March 31, 2012

March 31, 2011

	<i>(in millions)</i>	
As reported shares	868	848
Effect of options and performance share award units	9	6
Diluted shares	877	854

Stock options and performance share award units that were not included in the diluted earnings per share calculation because they were anti-dilutive were 1 million and 7 million for the three months ended March 31, 2012 and 2011, respectively.

Table of Contents**NOTES TO THE CONDENSED FINANCIAL STATEMENTS: (Continued)****Changes in Stockholders' Equity**

(E) FINANCING**Bank Credit Arrangements**

Bank credit arrangements provide liquidity support to the registrants' commercial paper borrowings and the traditional operating companies' variable rate pollution control revenue bonds. See Note 6 to the financial statements of each registrant under "Bank Credit Arrangements" in Item 8 of the Form 10-K for additional information.

The following table outlines the credit arrangements by company as of March 31, 2012:

Expires

Edgar Filing: ALABAMA POWER CO - Form 10-Q

Table of Contents**NOTES TO THE CONDENSED FINANCIAL STATEMENTS: (Continued)****(F) RETIREMENT BENEFITS**

Southern Company has a defined benefit, trustee, pension plan covering substantially all employees. The qualified pension plan is funded in accordance with requirements of the Employee Retirement Income Security Act of 1974, as amended. No mandatory contributions to the qualified pension plan are anticipated for the year ending December 31, 2012. Southern Company also provides certain defined benefit pension plans for a selected group of management and highly compensated employees. Benefits under these non-qualified pension plans are funded on a cash basis. In addition, Southern Company provides certain medical care and life insurance benefits for retired employees through other postretirement benefit plans. The traditional operating companies fund related other postretirement trusts to the extent required by their respective regulatory commissions.

See Note 2 to the financial statements of Southern Company, Alabama Power, Georgia Power, Gulf Power, and Mississippi Power in Item 8 of the Form 10-K for additional information.

Components of the net periodic benefit costs for the three months ended March 31, 2012 and 2011 were as follows:

NOTES TO THE CONDENSED FINANCIAL STATEMENTS: (Continued)

(G) EFFECTIVE TAX RATE AND UNRECOGNIZED TAX BENEFITS

Effective Tax Rate

See Note 5 to the financial statements of each registrant in Item 8 of the Form 10-K for information on the effective income tax rate.

Southern Company

Southern Company's effective tax rate was 34.2% for the three months ended March 31, 2012 compared to 34.6% for the corresponding period in 2011. Southern Company's effective tax rate is lower than the statutory rate primarily due to its employee stock plans' dividend deduction and non-taxable AFUDC equity.

Alabama Power

Alabama Power's effective tax rate was 38.3% for the three months ended March 31, 2012 compared to 37.1 % for the corresponding period in 2011. The increase was due to an increase in Alabama state income taxes as a result of a decrease in the state income tax deduction for federal income taxes paid.

Georgia Power

Georgia Power's effective tax rate was 34.9% for the three months ended March 31, 2012 compared to 34.6% for the corresponding period in 2011. The increase was primarily due to a decrease in AFUDC equity, which is non-taxable.

Gulf Power

Gulf Power's effective tax rate was 34.6% for the three months ended March 31, 2012 compared to 33.8% for the corresponding period in 2011. The increase was primarily due to a decrease in AFUDC equity, which is non-taxable.

Mississippi Power

Mississippi Power's effective tax rate was 24.7% for the three months ended March 31, 2012 compared to 32.2% for the corresponding period in 2011. The decrease was primarily due to an increase in AFUDC equity, which is non-taxable, related to the Kemper IGCC.

Southern Power

Southern Power's effective tax rate was 31.3% for the three months ended March 31, 2012 compared to 35.6% for the corresponding period in 2011. The decrease was primarily due to lower earnings before income taxes and a settlement with the IRS related to the production activities deduction. See "Unrecognized Tax Benefits" herein for additional information.

Table of Contents**NOTES TO THE CONDENSED FINANCIAL STATEMENTS: (Continued)****Unrecognized Tax Benefits**

Changes during 2012 for unrecognized tax benefits were as follows:

	Southern Company	Alabama Power	Georgia Power	Gulf Power	Mississippi Power	Southern Power
	<i>(in millions)</i>					
Unrecognized tax benefits as of December 31, 2011	\$ 120	\$ 32	\$ 47	\$ 3	\$ 5	\$ 3
Tax positions from current periods	3	1	1			
Tax positions from prior periods	(6)	(3)	(1)		(1)	(2)
Reductions due to settlements	(5)	(2)	(3)	(1)		1
Reductions due to expired statute of limitations						
Balance as of March 31, 2012	\$ 112	\$ 28	\$ 44	\$ 2	\$ 4	\$ 2

The tax positions from current periods relate primarily to state investment tax credits and the tax accounting method change for repairs-generation assets. See "Tax Method of Accounting for Repairs" herein for additional information. The decreases in tax positions from prior periods and reductions due to settlements relate to a settlement with the IRS of the calculation methodology for the production activities deduction.

The impact on the effective tax rate, if recognized, was as follows:

	As of March 31, 2012			As of December 31, 2011
	Georgia Power	Other Registrants	Southern Company	Southern Company
	<i>(in millions)</i>			
Tax positions impacting the effective tax rate	\$24	\$ 5	\$ 59	\$ 69
Tax positions not impacting the effective tax rate	20	32	53	51
Balance of unrecognized tax benefits	\$44	\$37	\$112	\$120

Edgar Filing: ALABAMA POWER CO - Form 10-Q

The tax positions impacting the effective tax rate primarily relate to state investment tax credits and a litigation settlement refund claim for Southern Company. See Note 5 to the financial statements of Southern Company under **Effective Tax Rate** in Item 8 of the Form 10-K for additional information. The tax positions not impacting the effective tax rate relate to the timing difference associated with the tax accounting method change for repairs-generation assets. See **Tax Method of Accounting for Repairs** herein for additional information. These amounts are presented on a gross basis without considering the related federal or state income tax impact.

Accrued interest for unrecognized tax benefits was as follows:

	Georgia	Other	Southern
	Power	Registrants	Company
	<i>(in millions)</i>		
Interest accrued as of December 31, 2011	\$ 6	\$ 3	\$ 10
Interest reclassified due to settlements	(2)	(3)	(5)
Interest accrued during the period	1		1
Balance as of March 31, 2012	\$ 5	\$	\$ 6

All of the registrants classify interest on tax uncertainties as interest expense. The interest reclassified due to settlements is primarily associated with a settlement with the IRS related to the calculation methodology for the production activities deduction.

None of the registrants accrued any penalties on uncertain tax positions.

Table of Contents**NOTES TO THE CONDENSED FINANCIAL STATEMENTS: (Continued)**

It is reasonably possible that the amount of the unrecognized tax benefits associated with a majority of the registrants' unrecognized tax positions will significantly increase or decrease within the next 12 months. The resolution of the tax accounting method change for repairs-generation assets, as well as the conclusion or settlement of federal and state audits, could also impact the balances significantly. At this time, an estimate of the range of reasonably possible outcomes cannot be determined.

Tax Method of Accounting for Repairs

Southern Company submitted a tax accounting method change for repair costs associated with its subsidiaries' generation, transmission, and distribution systems with the filing of the 2009 federal income tax return in September 2010. On August 19, 2011, the IRS issued a revenue procedure, which provides a safe harbor method of accounting that taxpayers may use to determine repair costs for transmission and distribution property. However, the IRS continues to work with the utility industry in an effort to resolve the repair costs for generation assets matter in a consistent manner for all utilities. On December 23, 2011, the IRS published regulations on the deduction and capitalization of expenditures related to tangible property that generally apply for tax years beginning on or after January 1, 2012. The utility industry anticipates more detailed guidance concerning these regulations. Due to uncertainty regarding the ultimate resolution of the repair costs for generation assets, an unrecognized tax position has been recorded for the tax accounting method change for repairs-generation assets. The ultimate outcome of this matter cannot be determined at this time.

(H) DERIVATIVES

Southern Company, the traditional operating companies, and Southern Power are exposed to market risks, primarily commodity price risk, interest rate risk, and occasionally foreign currency risk. To manage the volatility attributable to these exposures, each company nets its exposures, where possible, to take advantage of natural offsets and enters into various derivative transactions for the remaining exposures pursuant to each company's policies in areas such as counterparty exposure and risk management practices. Each company's policy is that derivatives are to be used primarily for hedging purposes and mandates strict adherence to all applicable risk management policies. Derivative positions are monitored using techniques including, but not limited to, market valuation, value at risk, stress testing, and sensitivity analysis. Derivative instruments are recognized at fair value in the balance sheets as either assets or liabilities.

Energy-Related Derivatives

The traditional operating companies and Southern Power enter into energy-related derivatives to hedge exposures to electricity, gas, and other fuel price changes. However, due to cost-based rate regulations and other various cost recovery mechanisms, the traditional operating companies have limited exposure to market volatility in commodity fuel prices and prices of electricity. Each of the traditional operating companies manages fuel-hedging programs, implemented per the guidelines of their respective state PSCs, through the use of financial derivative contracts, which is expected to continue to mitigate price volatility. Southern Power has limited exposure to market volatility in commodity fuel prices and prices of electricity because its long-term sales contracts shift substantially all fuel cost responsibility to the purchaser. However, Southern Power has been and may continue to be exposed to market volatility in energy-related commodity prices as a result of sales of uncontracted generating capacity.

To mitigate residual risks relative to movements in electricity prices, the traditional operating companies and Southern Power may enter into physical fixed-price or heat rate contracts for the purchase and sale of electricity through the wholesale electricity market. To mitigate residual risks relative to movements in gas prices, the traditional operating companies and Southern Power may enter into fixed-price contracts for natural gas purchases; however, a significant portion of contracts are priced at market.

Table of Contents**NOTES TO THE CONDENSED FINANCIAL STATEMENTS: (Continued)**

Energy-related derivative contracts are accounted for in one of three methods:

Regulatory Hedges Energy-related derivative contracts which are designated as regulatory hedges relate primarily to the traditional operating companies' fuel hedging programs, where gains and losses are initially recorded as regulatory liabilities and assets, respectively, and then are included in fuel expense as the underlying fuel is used in operations and ultimately recovered through the respective fuel cost recovery clauses.

Cash Flow Hedges Gains and losses on energy-related derivatives designated as cash flow hedges, which are mainly used to hedge anticipated purchases and sales and are initially deferred in OCI before being recognized in the statements of income in the same period as the hedged transactions, are reflected in earnings.

Not Designated Gains and losses on energy-related derivative contracts that are not designated or fail to qualify as hedges are recognized in the statements of income as incurred.

Some energy-related derivative contracts require physical delivery as opposed to financial settlement, and this type of derivative is both common and prevalent within the electric industry. When an energy-related derivative contract is settled physically, any cumulative unrealized gain or loss is reversed and the contract price is recognized in the respective line item representing the actual price of the underlying goods being delivered.

At March 31, 2012, the net volume of energy-related derivative contracts for power and natural gas positions for the Southern Company system, together with the longest hedge date over which the respective entity is hedging its exposure to the variability in future cash flows for forecasted transactions and the longest date for derivatives not designated as hedges, were as follows:

	Power			Gas		
	Net (Sold)	Longest Hedge Date	Longest Non-Hedge Date	Net Purchased	Longest Hedge Date	Longest Non-Hedge Date
	MWHs			mmBtu		
	<i>(in millions)</i>			<i>(in millions)</i>		
Southern Company	(0.1)		2012	221	2017	2017
Alabama Power				37	2017	
Georgia Power				85	2017	
Gulf Power				43	2017	
Mississippi Power				28	2017	
Southern Power	(0.1)		2012	28	2012	2017

In addition to the volumes discussed in the above table, the traditional operating companies and Southern Power enter into physical natural gas supply contracts that provide the option to sell back excess gas due to operational constraints. The maximum expected volume of natural gas subject to such a feature is 9 million mmBtu for Southern Company, 4 million mmBtu for Georgia Power, 2 million mmBtu for Southern Power, and is immaterial for the other registrants.

Edgar Filing: ALABAMA POWER CO - Form 10-Q

For cash flow hedges, the amounts expected to be reclassified from OCI to revenue and fuel expense for the next 12-month period ending March 31, 2013 are immaterial for all registrants.

Interest Rate Derivatives

Southern Company and certain subsidiaries also enter into interest rate derivatives to hedge exposure to changes in interest rates. The derivatives employed as hedging instruments are structured to minimize ineffectiveness. Derivatives related to existing variable rate securities or forecasted transactions are accounted for as cash flow hedges where the effective portion of the derivatives' fair value gains or losses is recorded in OCI and is reclassified into earnings at the same time the hedged transactions affect earnings, with any ineffectiveness recorded directly to earnings. Derivatives related to existing fixed rate securities are accounted for as fair value hedges, where the derivatives' fair value gains or losses and hedged items' fair value gains or losses are both recorded directly to earnings, providing an offset with any difference representing ineffectiveness.

Table of Contents**NOTES TO THE CONDENSED FINANCIAL STATEMENTS: (Continued)**

At March 31, 2012, the following interest rate derivatives were outstanding:

	Notional Amount	Interest Rate Received	Interest Rate Paid	Hedge Maturity Date	Fair Value Gain (Loss) March 31, 2012
	(in millions)				(in millions)
<i>Cash flow hedges of forecasted transactions</i>					
Alabama Power	\$300	3-month LIBOR	2.90%*	December 2022	\$(10)
<i>Fair value hedges of existing debt</i>					
Southern Company	350	4.15%	3-month LIBOR + 1.96%*	May 2014	14
Total	\$650				\$ 4

* Weighted Average

The following table reflects the estimated pre-tax gains (losses) that will be reclassified from OCI to interest expense for the next 12-month period ending March 31, 2013, together with the longest date that total deferred gains and losses are expected to be amortized into earnings.

Registrant	Estimated Gain (Loss) to be Reclassified for the 12 Months Ending March 31, 2013	Total Deferred Gains (Losses) Amortized Through
	(in millions)	
Southern Company	\$(16)	2037
Alabama Power	1	2035
Georgia Power	(3)	2037
Gulf Power	(1)	2020
Mississippi Power	(1)	2022
Southern Power	(11)	2016

Foreign Currency Derivatives

Edgar Filing: ALABAMA POWER CO - Form 10-Q

Southern Company and certain subsidiaries may enter into foreign currency derivatives to hedge exposure to changes in foreign currency exchange rates arising from purchases of equipment denominated in a currency other than U.S. dollars. Derivatives related to a firm commitment in a foreign currency transaction are accounted for as fair value hedges where the derivatives' fair value gains or losses and the hedged items' fair value gains or losses are both recorded directly to earnings. Derivatives related to a forecasted transaction are accounted for as a cash flow hedge where the effective portion of the derivatives' fair value gains or losses is recorded in OCI and is reclassified into earnings at the same time the hedged transactions affect earnings. Any ineffectiveness is typically recorded directly to earnings; however, Mississippi Power has regulatory approval allowing it to defer any ineffectiveness associated with firm commitments related to the Kemper IGCC to a regulatory asset. The derivatives employed as hedging instruments are structured to minimize ineffectiveness.

Table of Contents**NOTES TO THE CONDENSED FINANCIAL STATEMENTS: (Continued)**

At March 31, 2012, the following foreign currency derivatives were outstanding:

	Notional Amount	Forward Rate	Hedge Maturity Date	Fair Value Gain (Loss) March 31, 2012
	(in millions)			(in millions)
<i>Fair value hedges of firm commitments</i>				
Mississippi Power	EUR6.8	1.3805 Dollars per Euro*	Various through March 2014	\$
<i>Derivatives not designated as hedges</i>				
Mississippi Power	EUR18.1	1.3209 Dollars per Euro*	N/A	
Total	EUR24.9			\$

Total energy-related derivative gains (losses)	\$(249)	\$(53)	\$(86)	\$(54)	\$(56)

* Georgia Power includes Other regulatory liabilities, deferred in Other deferred credits and liabilities.

For the three months ended March 31, 2012 and March 31, 2011, the pre-tax effects of interest rate derivatives designated as fair value hedging instruments on Southern Company's statements of income were immaterial.

Table of Contents**NOTES TO THE CONDENSED FINANCIAL STATEMENTS: (Continued)**

For the three months ended March 31, 2012, the pre-tax effects of foreign currency derivatives designated as fair value hedging instruments on Southern Company's and Mississippi Power's statements of income were immaterial. For the three months ended March 31, 2011, the pre-tax gains from foreign currency derivatives designated as fair value hedging instruments on Southern Company's and Mississippi Power's statements of income were \$3 million. This amount was offset with changes in the fair value of the purchase commitment related to equipment purchases; therefore, there was no impact on Southern Company's or Mississippi Power's statements of income.

For the three months ended March 31, 2012 and March 31, 2011, the pre-tax effects of energy-related derivatives and interest rate derivatives designated as cash flow hedging instruments on the statements of income were as follows:

Derivatives in Cash Flow Hedging Relationships	Gain (Loss) Recognized in OCI on Derivative (Effective Portion)		Gain (Loss) Reclassified from Accumulated OCI into Income (Effective Portion) Statements of Income Location			Amount

Edgar Filing: ALABAMA POWER CO - Form 10-Q

There was no material ineffectiveness recorded in earnings for any registrant for any period presented.

For the three months ended March 31, 2012, the pre-tax losses from energy-related derivatives not designated as hedging instruments on the statements of income were \$6 million for Southern Company and Southern Power. For the three months ended March 31, 2011, the pre-tax effect of energy-related derivatives not designated as hedging instruments on the statements of income were immaterial for Southern Company and Southern Power.

For the three months ended March 31, 2012, the pre-tax effects of foreign currency derivatives not designated as hedging instruments were recorded as regulatory assets and liabilities and were immaterial for Southern Company and Mississippi Power.

Table of Contents**NOTES TO THE CONDENSED FINANCIAL STATEMENTS: (Continued)****Contingent Features**

The registrants do not have any credit arrangements that would require material changes in payment schedules or terminations as a result of a credit rating downgrade. There are certain derivatives that could require collateral, but not accelerated payment, in the event of various credit rating changes of certain Southern Company subsidiaries. At March 31, 2012, the fair value of derivative liabilities with contingent features, by registrant, was as follows:

	Southern Company	Alabama Power	Georgia Power	Gulf Power	Mississippi Power	Southern Power
			<i>(in millions)</i>			
Derivative liabilities	\$36	\$9	\$10	\$7	\$6	\$4

At March 31, 2012, the registrants had no collateral posted with their derivative counterparties. The maximum potential collateral requirements arising from the credit-risk-related contingent features, at a rating below BBB- and/or Baa3, were \$36 million for each registrant. Generally, collateral may be provided by a Southern Company guaranty, letter of credit, or cash. For the traditional operating companies and Southern Power, included in these amounts are certain agreements that could require collateral in the event that one or more Power Pool participant has a credit rating change to below investment grade.

NOTES TO THE CONDENSED FINANCIAL STATEMENTS: (Continued)

(I) SEGMENT AND RELATED INFORMATION

Southern Company's reportable business segments are the sale of electricity in the Southeast by the four traditional operating companies and Southern Power. Southern Power's revenues from sales to the traditional operating companies were \$112 million and \$83 million for the three months ended March 31, 2012 and March 31, 2011, respectively. The All Other column includes parent Southern Company, which does not allocate operating expenses to business segments. Also, this category includes segments below the quantitative threshold for separate disclosure. These segments include investments in telecommunications and leveraged lease projects. All other intersegment revenues are not material. Financial data for business segments and products and services was as follows:

	Electric Utilities						
	Traditional				All		
	Operating Companies	Southern Power	Eliminations	Total	Other	Eliminations	Consolidated
<i>(in millions)</i>							
Three Months Ended March 31, 2012:
