(Mark One)

**ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES  
EXCHANGE ACT OF 1934**

**For the fiscal year ended September 26, 2010**

**OR**

**TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES  
EXCHANGE ACT OF 1934**

**For the transition period from \_\_\_\_\_ to \_\_\_\_\_ .**

**Commission file number 0-19528**

**QUALCOMM Incorporated**

**(Exact name of registrant as specified in its charter)**

**Delaware  
(State or other jurisdiction of  
incorporation or organization)**

**95-3685934  
(I.R.S. Employer  
Identification No.)**

**5775 Morehouse Drive  
San Diego, California  
(Address of principal executive offices)**

**92121-1714  
(Zip Code)**

**Registrant's telephone number, including area code: (858) 587-1121  
Securities registered pursuant to section 12(b) of the Act:**

**Title of Each Class  
Common stock, \$0.0001 par value**

**Name of Each Exchange on Which Registered  
NASDAQ Stock Market LLC**

**Securities registered pursuant to Section 12(g) of the Act:**

None

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. YES  NO

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. YES  NO

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. YES  NO

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes  No

Edgar Filing: QUALCOMM INC/DE - Form 10-K

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of large accelerated filer, accelerated filer and smaller reporting company in Rule 12b-2 of the Exchange Act. (Check one):

Large Accelerated Filer  Accelerated Filer  Non-Accelerated Filer  Smaller Reporting Company

(Do not check if a smaller reporting company)

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). YES  NO

---

**Table of Contents**

The aggregate market value of the voting and non-voting common equity held by non-affiliates of the registrant at March 28, 2010 was \$67,115,795,559.\*

The number of shares outstanding of the registrant's common stock was 1,617,713,293 at November 1, 2010.

**DOCUMENTS INCORPORATED BY REFERENCE**

Portions of the registrant's Definitive Proxy Statement to be filed with the Commission pursuant to Regulation 14A in connection with the registrant's 2011 Annual Meeting of Stockholders, to be filed subsequent to the date hereof, are incorporated by reference into Part III of this Report. Such Definitive Proxy Statement will be filed with the Securities and Exchange Commission not later than 120 days after the conclusion of the registrant's fiscal year ended September 26, 2010.

\* Excludes the Common Stock held by executive officers, directors and stockholders whose ownership exceeds 5% of the Common Stock outstanding at March 28, 2010. This calculation does not reflect a determination that such persons are affiliates for any other purposes.

In this document, the words Qualcomm, we, our, ours and us refer only to QUALCOMM Incorporated and its subsidiaries and not any other person or entity.

**PART I**

**Item 1. Business**

This Annual Report (including, but not limited to, the following section regarding Management's Discussion and Analysis of Financial Condition and Results of Operations) contains forward-looking statements regarding our business, financial condition, results of operations and prospects. Words such as expects, anticipates, intends, plans, believes, seeks, estimates and similar expressions or variations of such words are intended to identify forward-looking statements, but are not the exclusive means of identifying forward-looking statements in this Annual Report. Additionally, statements concerning future matters such as the development of new products, enhancements or technologies, sales levels, expense levels and other statements regarding matters that are not historical are forward-looking statements.

Although forward-looking statements in this Annual Report reflect our good faith judgment, such statements can only be based on facts and factors currently known by us. Consequently, forward-looking statements are inherently subject to risks and uncertainties and actual results and outcomes may differ materially from the results and outcomes discussed in or anticipated by the forward-looking statements. Factors that could cause or contribute to such differences in results and outcomes include without limitation those discussed under the heading Risk Factors below, as well as those discussed elsewhere in this Annual Report. Readers are urged not to place undue reliance on these forward-looking statements, which speak only as of the date of this Annual Report. We undertake no obligation to revise or update any forward-looking statements in order to reflect any event or circumstance that may arise after the date of this Annual Report. Readers are urged to carefully review and consider the various disclosures made in this Annual Report, which attempt to advise interested parties of the risks and factors that may affect our business, financial condition, results of operations and prospects.

We incorporated in 1985 under the laws of the state of California. In 1991, we reincorporated in the state of Delaware. We operate and report using a 52-53 week fiscal year ending the last Sunday in September. Our 52-week fiscal years consist of four equal quarters of 13 weeks each, and our 53-week fiscal years consist of three 13-week fiscal quarters and one 14-week fiscal quarter. The financial results for our 53-week fiscal years and our 14-week fiscal quarters will not be exactly comparable to our 52-week fiscal years and our 13-week fiscal quarters. The fiscal years ended September 26, 2010, September 27, 2009 and September 28, 2008 all included 52 weeks.

**Overview**

In 1989, we publicly introduced the concept that a digital communication technique called CDMA could be commercially successful in cellular wireless communication applications. CDMA stands for Code Division Multiple Access and is one of the main technologies currently used in digital wireless communications networks (also known as wireless networks). CDMA and TDMA (Time Division Multiple Access), of which Global System for Mobile Communications (GSM) is the primary commercial form, are the primary digital technologies currently used to transmit a wireless device user's voice or data over radio waves using a public cellular wireless network. Because we led, and continue to lead, the development and commercialization of CDMA technology, we own significant intellectual property, including patents, patent applications and trade secrets, which applies to all versions of CDMA, portions of which we license to other companies and implement in our own products. The wireless communications industry generally recognizes that a company seeking to develop, manufacture and/or sell products that use CDMA technology will require a patent license from us.

We also continue our leading role in the development and commercialization of Orthogonal Frequency Division Multiplexing Access (OFDMA)-based technologies for which we have substantial intellectual property. Our CDMA licensees' sales of multimode CDMA and OFDMA devices are covered by their existing CDMA license agreements with us. We have begun to license companies to make and sell OFDMA products that do not also implement CDMA, and nine companies have royalty-bearing licenses under our patent portfolio for use in such OFDMA products.

**Our Revenues.** We generate revenues by licensing portions of our intellectual property to manufacturers of wireless products (such as mobile devices, also known as subscriber units, which include handsets, other consumer devices and modem cards, and the infrastructure required to establish and operate a wireless network). We receive

licensing fees and royalties on products sold by our licensees that incorporate our patented technologies. We also sell products and services, which include:

1

---

**Table of Contents**

CDMA-based integrated circuits (also known as chips or chipsets) and Radio Frequency (RF) and Power Management (PM) chips and system software used in mobile devices and in wireless networks;

Software products and services for content enablement across a wide variety of platforms and devices for the wireless industry;

Equipment, software and services used by companies, including those in the transportation industry and governments, to wirelessly connect with their assets and workforce;

Software products and services that enable mobile commerce services;

Services to wireless operators delivering multimedia content, including live television, in the United States; and

Software and hardware development services.

***Our Licensing Business.*** We grant licenses to use portions of our intellectual property portfolio, which includes certain patent rights essential to and/or useful in the manufacture and sale of certain wireless products, and collect license fees and royalties in partial consideration for such licenses.

***Our Integrated Circuits Business.*** We develop and supply CDMA-based integrated circuits and system software for wireless voice and data communications, multimedia functions and global positioning system products. We also design and create multimode and multiband integrated circuits incorporating other wireless standards for roaming in global roaming markets. Our integrated circuit products and system software are used in wireless devices, particularly mobile phones, tablets, laptops, data modules, handheld wireless computers, data cards and infrastructure equipment. The integrated circuits for wireless devices include the baseband Mobile Station Modem (MSM), Mobile Data Modem (MDM), Qualcomm Single Chip (QSC), Qualcomm Snapdragon (QSD), RF, PM and Bluetooth devices, as well as the system software that enables the other device components to interface with the integrated circuit products and is the foundation software enabling manufacturers to develop devices utilizing the functionality within the integrated circuits. These integrated circuits for wireless devices and system software perform voice and data communication, multimedia and global positioning functions, radio conversion between RF and baseband signals, power management and peripheral connectivity. Our infrastructure equipment Cell Site Modem (CSM) integrated circuits and system software perform the core baseband CDMA modem functionality in the wireless operator's base station equipment providing wireless standards-compliant processing of voice and data signals to and from wireless devices. Because of our broad and unique experience in designing and developing CDMA-based products, we not only design the baseband integrated circuit, but the supporting system as well, including the RF devices, PM devices and accompanying software products. This approach enables us to optimize the performance of the wireless device with improved product features, as well as the integration and performance of the network system. Our design of the system allows CDMA systems and devices manufactured by our customers to come to market faster. We provide our integrated circuits and system software, including reference designs and tools, to many of the world's leading wireless device and infrastructure equipment manufacturers. We also provide support to enable our customers to reduce the time required to design their products and bring their products to market faster. We plan to add additional features and capabilities to our integrated circuit products to help our customers reduce the costs and size of their products, to simplify our customers' design processes and to enable more wireless devices and services.

***Our Wireless Device Software and Related Services Business.*** We provide software products and services for the global wireless industry. Our Brew products and services enable wireless operators, device manufacturers and software developers to provide over-the-air and pre-loaded wireless applications and services. Our Plaza products and services enable wireless operators, device manufacturers and publishers to create and distribute mobile content across a variety of platforms and devices. We also offer Xiam wireless content discovery and recommendation products to help wireless operators improve usage and adoption of digital content and services. We also provide QChat, a push to talk product optimized for third generation (3G) networks, as well as QPoint, which enables wireless operators to offer

enhanced 911 (E-911) wireless emergency and other location-based applications and services.

***Our Asset Tracking and Services Business.*** We design, manufacture and sell equipment, license software and provide services to our customers to enable them to connect wirelessly with their assets, products and workforce. We offer satellite- and terrestrial-based two-way wireless connectivity and position location services to transportation and logistics fleets and other enterprise companies to enable our customers to track the location and monitor the performance of their assets, and the workflow of their personnel.

**Table of Contents**

***Our Mobile Commerce Business.*** In fiscal 2011, we expect to introduce a new product application trademarked as SWAGG, which will be marketed on a standalone basis directly to consumers. SWAGG's core features include purchase and gift of virtually stored-value gift cards delivered via mobile devices. In addition, we provide a single, secure, certified application embedded on select wireless devices, which enables financial institutions and merchants to deliver branded services to consumers through the wireless devices.

***Our FLO TV Business.*** Our subsidiary, FLO TV Incorporated (FLO TV), currently offers its service in the United States over our nationwide multicast network. We have commenced a restructuring plan under which we expect to exit the current FLO TV service business. Additionally, we continue to evaluate strategic options for the FLO TV business, which include, but are not limited to, operating the FLO TV network under a new wholesale service model; sale to, or joint venture with, a third party; and/or the sale of the spectrum licenses and discontinuance of the operation of the network.

Our MediaFLO Technologies (MFT) division is comprised of the FLO Technology group, which continues to develop our MediaFLO MDS and MediaFLO technology, and the FLO International group, which markets MediaFLO for deployment outside of the United States. The market for mobile TV remains nascent with numerous competing technologies and standards.

***Our Display Business.*** We continue to develop display technology for the full range of consumer-targeted mobile products. Our interferometric modulator (IMOD) display technology, based on a MEMS structure combined with thin film optics and sold under the mirasol brand, is expected to provide performance, power consumption and cost benefits as compared to current display technologies.

**Wireless Telecommunications Market**

Use of wireless telecommunications devices has increased dramatically in the past decade. According to Wireless Intelligence estimates as of November 1, 2010, the number of worldwide mobile connections is expected to reach approximately 5.3 billion by the end of 2010 and almost 7.0 billion in 2014. Growth in the early days of wireless communications was driven by the need to make voice calls in a mobile environment. More recently, increases in demand are primarily driven by the desire to have access to data services in a mobile environment. This is evidenced by the continued transition from 2G to 3G services. According to Wireless Intelligence, in March 2010, the industry reached a significant milestone by surpassing one billion 3G connections. Furthermore, Wireless Intelligence expects the number of global 3G connections to reach approximately 2.8 billion by 2014. There are several drivers for the growth in 3G:

- Consumer awareness and desire for data services;
- Mature 3G networks with high data rates;
- Consumer demand for data centric smartphone devices;
- Emergence of new data devices; and
- Growth in emerging regions.

The last couple of years have witnessed a significant increase in the consumer's awareness and willingness to use mobile data services. Applications such as email, access to the mobile Internet, downloading of videos and social networking are driving the demand for 3G services and more capable phones.

According to the CDMA Development Group (CDG) and the Global mobile Suppliers Association (GSA), approximately 85% of the world's wireless networks now support 3G, a sign that operators are making network investments to address the growing demand for wireless data. Operators are continuing to make network investments by upgrading their networks. According to the GSA, approximately 99% of the global WCDMA operators have upgraded their networks to offer High Speed Packet Access (HSPA) services. With support for higher data rates and increased capacity, networks will evolve to keep up with the growing demand for wireless data.

The emergence of the mobile Internet is helping increase demand for 3G smartphones as the ability to access data is simplified and enhanced when using a smartphone. In the early days of the smartphone, these devices were

designed primarily for high end business users. However, innovation and competition are helping to drive a broader set of devices into the market that provide compelling user experiences at consumer acceptable price points, which make such devices more accessible by a larger portion of the subscriber base.

The need to stay connected anywhere, anytime is helping drive demand for data connectivity on notebook and netbook computers with either embedded 3G connectivity or via an external 3G USB modem. New device

**Table of Contents**

categories, such as e-readers, have also emerged over the last couple of years. These new devices take advantage of the capabilities of 3G networks to download digital books, newspapers and magazines anywhere. Other emerging device categories, such as connected media tablets, digital picture frames and machine to machine communication, will help further drive global demand for 3G.

Demand for wireless voice and data services in emerging regions is helping to increase global demand for 3G. Emerging regions still have relatively low penetration rates of wireless telecommunications services. 3G provides an efficient way for operators to offer both voice and data services to address these demands, and since fixed broadband penetration is very low in these regions, 3G presents a cost effective means of providing broadband capabilities to consumers. According to Informa Telecoms & Media, more than 50% of 3G handset shipments will go to emerging regions in 2011.

**Wireless Technologies**

The significant growth in the use of wireless devices worldwide, such as smartphones, and demand for data services and applications requires constant innovation to further improve the user experience, expand capacity and enable dense deployments of low power nodes, such as femtocells. To meet these requirements, progressive generations of wireless telecommunications technology standards have evolved. The use of wireless standards for mobile communications within individual countries is generally determined by the telecommunication service providers operating in those countries and, in some instances, local government regulations. Such determinations are typically based on economic criteria and the service provider's evaluation of each technology's ability to provide the features and functionality required for its business plan. More than two decades ago, the European Community developed regulations requiring the use of the GSM standard, a TDMA-based, 2G technology. In addition, there are several versions of CDMA technology that have been adopted worldwide as public cellular standards. The first version, known as cdmaOne, is a 2G cellular technology that was first commercially deployed in the mid-1990s. The other subsequent versions of CDMA are referred to as 3G technologies.

**Second Generation.** Compared to first generation analog systems, 2G digital technology provided for significantly enhanced efficiency within a fixed spectrum resulting in greatly increased voice capacity. 2G technologies also enabled numerous enhanced services, but data services were generally limited to low speed transmission rates. The main 2G digital cellular technologies in use today are called cdmaOne or IS-95A/B, a technology largely developed and patented by us, and GSM, a form of TDMA. Many GSM operators deployed 2G mobile packet data technologies, such as General Packet Radio Service (GPRS) and Enhanced Data Rates for Global Evolution (EDGE) in areas serviced by GSM.

**Third Generation.** As a result of demand for wireless networks that simultaneously carry both high speed data and voice traffic, the International Telecommunications Union (ITU), a standards setting organization, adopted the 3G standard known as IMT-2000, which encompasses six terrestrial operating radio interfaces, each of which incorporates our intellectual property. Two are TDMA-based, three of them are CDMA-based and the other is OFDMA-based. The three CDMA-based 3G technologies are known commonly throughout the wireless industry as:

CDMA2000, including 1X (including revisions A through E), 1xEV-DO (EV-DO, or Evolution Data Optimized) including revisions A through C, developed by 3<sup>rd</sup> Generation Partnership Project Two (3GPP2);

Wideband CDMA (WCDMA), also known as Universal Mobile Telecommunications Systems (UMTS), including High Speed Packet Access (HSPA), part of 3<sup>rd</sup> Generation Partnership Project (3GPP) Release 5 and 6, and HSPA+, part of 3GPP Release 7, 8, 9 and beyond; and

CDMA Time Division Duplex (TDD), of which there are currently two versions, Time Division Duplex-CDMA (TD-CDMA) and Time Division-Synchronous CDMA (TD-SCDMA). Both are part of the specifications developed by 3GPP.

Even though the OFDMA technologies are part of the IMT-2000 standard, to differentiate them from the 3G CDMA technologies, the OFDMA technologies are often called fourth generation (4G).

Some of the advantages of 3G CDMA technology over 2G technologies include increased network capacity, improved user experience, compatibility with internet protocols, higher capacity for data and faster access to data (Internet) and higher data throughput rates. CDMA2000 and WCDMA are widely deployed today in wireless networks throughout the world. TD-SCDMA has been deployed in China. EV-DO Release B in the CDMA2000 family was launched in 2010; Release 7 of HSPA+ was launched in 2009; and Release 8 of HSPA+ was launched in 2010.

**Table of Contents**

CDMA2000 (1X, 1xEV-DO, EV-DO Revision A/B) networks are deployed by operators in several markets that support both voice and a wide range of high-speed wireless data services. Enhancements based upon the CDMA2000 Revision E Standard, called 1X Advanced, are being planned for CDMA2000 1X that will further increase voice capacity. Standardization work has been completed on 1xEV-DO Revision C, sometimes called DO-Advanced. Enhancements based upon these updated standards and improved implementations have and will continue to be deployed in our products and wireless networks to increase capacity and data rates.

GSM operators around the world, including those in the European Community and in the United States, have focused primarily on the UMTS Frequency Division Duplexing (FDD) radio interface of the IMT-2000 standard, known as WCDMA, for their network evolution. WCDMA is based on our CDMA technology and incorporates many of our patented inventions (as do all of the CDMA radio interfaces of the IMT-2000 standard). The majority of the world's wireless device and infrastructure manufacturers (more than 115 and including all leading suppliers) have licensed our technology for use in WCDMA products, enabling them to utilize this WCDMA mode of the 3G technology. To enable GSM operators to deploy WCDMA in the 900MHz spectrum band, the European Union permitted IMT-2000 technologies, which include WCDMA, to be deployed in the lower frequency 900 MHz band. This is called UMTS900.

The three ITU 3G CDMA radio interfaces are all based on the core principles of CDMA technology, and our intellectual property rights include a valuable patent portfolio essential to implementation of each of the 3G CDMA alternative standards and patents that are useful for commercially successful product implementations. Generally, we have licensed substantially all of our relevant patents to our CDMA subscriber and infrastructure equipment licensees.

These 3G CDMA versions (CDMA2000, WCDMA, and TD-SCDMA) require separate implementations that are not interchangeable. While the fundamental core technologies are derived from CDMA and, in addition to other features and functionality, are covered by our patents, their specifications each require unique infrastructure products, network design, air interface protocols and management. However, subscriber roaming amongst systems using different air interfaces is made possible through multimode wireless devices.

The various revisions of the 3G CDMA specifications have significantly increased performance capacity and data speeds. It is expected that future revisions of the 3G CDMA specifications will provide further enhancements. Many wireless operators are planning to deploy technology based on OFDMA to complement their existing 3G networks to provide additional capacity for data services when they have access to new, wider spectrum band allocations. 3GPP has adopted a standard specifying an OFDMA system called Long Term Evolution (LTE), and the Institute of Electrical and Electronics Engineers (IEEE) has specified 802.16 (WiMax). The OFDMA technologies that have been standardized will support high data rates in up to 20 megahertz (MHz) channels. Since LTE typically will be overlaid over existing 3G networks, seamless interoperability with 3G has been standardized by 3GPP. WiMax was deployed ahead of LTE and targeted unpaired spectrum using a TDD radio interface. LTE supports both paired spectrum, using the LTE FDD radio interface, and unpaired spectrum, using the LTE TDD radio interface, and will also be able to address many of the unpaired spectrum bands targeted by WiMax. Compared to WiMax, LTE is expected to achieve greater economy of scale through its interoperability with 3G. Certain operators have selected WiMax because of regulatory considerations specific to their networks and spectrum holdings. 3GPP Release 10 of LTE and 802.16m, an upgrade of IEEE 802.16e, have both been approved by the ITU to become what are called IMT-Advanced technologies, commonly referred to as 4G. They will support additional features, higher bandwidths, and higher data rates than the previous versions. HSPA+ continues to evolve in parallel; 3GPP Release 8 of HSPA+ introduces multicarrier operation with 10 MHz of bandwidth that evolves to support up to 20 MHz of bandwidth in Release 10.

We have been actively pursuing research and development of OFDMA-based wireless communication technologies. We believe that each of these standards incorporates our patented technologies. We have nine companies with royalty-bearing licenses under our patent portfolio for use in single-mode OFDMA products (i.e., OFDMA products that do not implement CDMA-based standards). Multimode products that implement both OFDMA and CDMA technologies will, in most cases, be licensed under our existing CDMA license agreements.

***Our Engineering Resources.*** We have significant engineering resources, including engineers with substantial expertise in CDMA, OFDMA and a broad range of other technologies. Using these engineering resources, we expect to continue to develop new versions of CDMA, OFDMA and other technologies, develop alternative technologies for

certain specialized applications (including multicast), participate in the formulation of new wireless telecommunications standards and technologies and assist in deploying wireless voice and data communications networks around the world.

**Table of Contents**

***Investments in New and Existing Products, Services and Technologies.*** We continue to invest in research and development in a variety of ways in an effort to extend the market for our products and services.

We develop and commercialize 3G CDMA-based technologies and are working on commercializing the OFDMA-based LTE technology. We actively support CDMA-based technologies, products and network operations to grow our royalty revenues and integrated circuit and software revenues. From time to time, we may also make acquisitions to meet certain technology needs, to obtain development resources or to pursue new business opportunities.

We develop on our own, and with our partners, innovations that are integrated into our product portfolio to further expand the market and enhance the value of our products and services. These innovations are expected to enable our customers to improve the performance or value of their existing services, offer these services more affordably and introduce revenue-generating broadband data services ahead of their competition.

We make investments to provide our integrated circuit customers with chipsets that combine multiple wireless technologies for use in consumer devices, including smartphones, consumer electronics and other data devices. Our integrated chipsets often include multiple technologies, including advanced multimode modems, application processors and graphics engines, as well as the tools to connect these diverse pieces of technology. We continue to support multiple mobile client software environments in our multimedia and convergence chipsets, such as Brew Mobile Platform, Java, Windows Mobile, Web OS, Linux, Android and Google Chrome.

We continue to develop our IMOD display technology based on a micro-electro-mechanical-systems (MEMS) structure combined with thin film optics and sell such displays under the mirasol brand. Early-stage mirasol displays have been incorporated in a limited number of consumer devices. IMOD display technologies may be included in the full range of consumer-targeted mobile products and are expected to provide performance, power consumption and cost benefits as compared to current display technologies. In June 2009, we commenced operations of a dedicated mirasol display fabrication plant in Taiwan. Operation of this plant is outsourced to Cheng Uei Precision Industry Co., Ltd. (also known as Foxlink), a developer and manufacturer of communications devices, computers and consumer electronics.

We continue to develop our MediaFLO MDS and Orthogonal Frequency Division Multiplexing (OFDM)-based MediaFLO technology, including development to extend the MDS operability to multiple air interfaces, to optimize the low-cost data offload and delivery of multimedia content to multiple wireless subscribers simultaneously, otherwise known as multicasting.

We make strategic investments in early-stage and other companies that we believe open new markets for our technology, support the design and introduction of new products and services and/or possess unique capabilities or technology. To the extent that such investments become liquid and meet our strategic objectives, we intend to make regular periodic sales of our interests in these investments that are recognized in investment income.

**Operating Segments**

Consolidated revenues from international customers and licensees as a percentage of total revenues were 95%, 94% and 91% in fiscal 2010, 2009 and 2008, respectively. During fiscal 2010, 29%, 27%, 12% and 9% of our revenues were from customers and licensees based in China, South Korea, Taiwan and Japan, respectively, as compared to 23%, 35%, 8% and 11% during fiscal 2009, respectively, and 21%, 35%, 5% and 14% during fiscal 2008, respectively. Revenues from two customers, LG Electronics and Samsung Electronics, constituted a significant portion (each more than 10%) of consolidated revenues in fiscal 2010, 2009 and 2008.

***Qualcomm CDMA Technologies Segment (QCT).*** QCT is a leading developer and supplier of CDMA-based integrated circuits and system software for wireless voice and data communications, multimedia functions and global positioning system products. QCT's integrated circuit products and system software are used in wireless devices, particularly mobile phones, laptops, data modules, handheld wireless computers, data cards and infrastructure equipment. These products provide customers with advanced wireless technology, enhanced component integration and interoperability and reduced time-to-market. QCT markets and sells products in the United States and internationally through a global sales force. QCT products are sold to many of the world's leading wireless device and infrastructure equipment manufacturers. In fiscal 2010, QCT shipped approximately 399 million MSM integrated circuits for CDMA wireless devices worldwide, as compared to approximately 317 million and 336 million in fiscal

2009 and 2008, respectively. QCT revenues comprised 61%, 59% and 60% of total consolidated revenues in fiscal 2010, 2009 and 2008, respectively.

QCT utilizes a fabless production business model, which means that we do not own or operate foundries for the production of silicon wafers from which our integrated circuits are made. Integrated circuits are die cut from silicon wafers that have completed the assembly and final test manufacturing processes. Die cut from silicon wafers are the

**Table of Contents**

essential components of all of our integrated circuits and a significant portion of the total integrated circuit cost. We rely on independent third-party suppliers to perform the manufacturing and assembly, and most of the testing, of our integrated circuits. Our suppliers are also responsible for the procurement of most of the raw materials used in the production of our integrated circuits. The majority of our integrated circuits are purchased using a two-stage manufacturing business model, in which we purchase die from semiconductor manufacturing foundries and contract with separate third-party manufacturers for back-end assembly and test services. We refer to this two-stage manufacturing business model as Integrated Fabless Manufacturing (IFM). We also employ a turnkey model in which our foundry suppliers are responsible for delivering fully assembled and tested integrated circuits. Our fabless model provides us the flexibility to select suppliers that offer advanced process technologies to manufacture, assemble and test our integrated circuits at a competitive price.

Globalfoundries, IBM, Samsung Electronics Co., Ltd., Taiwan Semiconductor Manufacturing Company, Ltd. and United Microelectronics Corporation are the primary foundry suppliers for our family of baseband integrated circuits. Freescale Semiconductor, Inc., Globalfoundries, IBM, Semiconductor Manufacturing International Corporation, Taiwan Semiconductor Manufacturing Company, Ltd. and United Microelectronics Corporation are the primary foundry suppliers for our family of analog, RF and PM integrated circuits. Advanced Semiconductor Engineering Inc., Amkor Technology Inc. and STATSChipPAC Ltd. are the primary back-end semiconductor assembly and test suppliers under our IFM model.

QCT offers a broad portfolio of products, including both wireless device and infrastructure integrated circuits, in support of CDMA2000 1X and 1xEV-DO, as well as the EV-DO Revision A and EV-DO Revision B evolutions of CDMA 2000 technology. Leveraging our expertise in CDMA, we have also developed integrated circuits for manufacturers and wireless operators deploying the WCDMA version of 3G. More than 60 device manufacturers have selected our WCDMA products that support GSM/GPRS, WCDMA, HSDPA, HSUPA and HSPA+ for their devices. We have not commercially sold a CSM integrated circuit product for WCDMA base station equipment. Recently, QCT also began shipping multimode products for the LTE standard, which offer seamless backward compatibility to existing 3G technologies.

Our gpsOne position location technology is in more than 500 million gpsOne enabled devices sold worldwide. Compatible with all major air interfaces, our gpsOne technology is the industry's only fully-integrated wireless baseband and assisted global positioning system product and has enabled network operators to cost-effectively meet the FCC's E-911 mandate as well as offer a wide range of services leveraging location data.

Our integrated circuit products span a broad range of market tiers, from entry-level solutions for emerging markets up to the very high-end device tier. Our chipsets integrate unique combinations of features, such as multi-megapixel cameras, videotelephony, streaming multimedia, audio, 3D graphics, advanced position-location capabilities through integrated gpsOne technology and peripheral connectivity, to enable a wide range of devices.

The Snapdragon family of chipset products is designed to enable our customers to develop computing-centric devices that also offer a full range of wireless connectivity capabilities. Integrating the baseband and a custom Qualcomm designed low-power high-performance microprocessor into a single chip or package, the Snapdragon platform expands Qualcomm's reach beyond the traditional wireless market by targeting not only the very high-end smartphone market but also the smartbook and tablet categories of consumer products and other types of consumer electronics.

Gobi modules are designed to deliver embedded mobile wireless connectivity to notebook and netbook computers. Supporting numerous air interfaces, Gobi modules also feature global positioning system capabilities to allow notebook manufacturers to more easily offer greater connectivity with their products. Gobi modules have also been used in e-readers, routers and other products that benefit from 3G connectivity.

QCT also offers chipsets for WLAN and Bluetooth, complementary connectivity technologies to its core 3G products. For WLAN, QCT offers the WCN1312 chip for handsets and other mobile devices. QCT's Bluetooth chips support Bluetooth connectivity for handsets and headsets.

The market in which our QCT segment operates is intensely competitive. QCT competes worldwide with a number of United States and international designers and manufacturers of semiconductors. As a result of global expansion by foreign and domestic competitors, technological changes and the potential for further industry consolidation, we

anticipate the market to remain very competitive. We believe that the principal competitive factors for our products may include performance, level of integration, quality, compliance with industry standards, price, time-to-market, system cost, design and engineering capabilities, new product innovation and customer support. We also compete in both single- and dual-mode environments against alternative wireless communications technologies including, but not limited to, GSM/GPRS/EDGE, TDMA, TD-SCDMA and WiMax.

**Table of Contents**

QCT's current competitors include, but are not limited to, major companies such as Broadcom, Freescale, Fujitsu, Icera, Intel (through their recently announced agreement to acquire Infineon's Wireless Solutions business), Marvell Technology, Mediatek, nVidia, Renesas Electronics, ST-Ericsson (a joint venture between Ericsson Mobile Platforms and ST-NXP Wireless), Texas Instruments and VIA Telecom, as well as major telecommunications equipment companies such as Ericsson, Matsushita, Motorola and Samsung, who design at least some of their own integrated circuits and software for certain products. QCT also faces competition from some early-stage companies. Our competitors may devote significantly greater amounts of their financial, technical and other resources to market competitive telecommunications systems or to develop and adopt competitive digital cellular technologies, and those efforts may materially and adversely affect QCT. Moreover, competitors may offer more attractive product pricing or financing terms than we do as a means of gaining access to the wireless telecommunications market or customers.

***Qualcomm Technology Licensing Segment (QTL).*** QTL grants licenses or otherwise provides rights to use portions of our intellectual property portfolio, which includes certain patent rights essential to and/or useful in the manufacture and sale of certain wireless products, including, without limitation, products implementing cdmaOne, CDMA2000, WCDMA, CDMA TDD (including TD-SCDMA), GSM/GPRS/EDGE and/or OFDMA (e.g., LTE, WiMax) standards and their derivatives. QTL receives license fees as well as ongoing royalties based on worldwide sales by licensees of products incorporating or using our intellectual property. License fees are fixed amounts paid in one or more installments. Ongoing royalties are generally based upon a percentage of the wholesale (i.e., licensee's) selling price of licensed products, net of certain permissible deductions (e.g., certain shipping costs, packing costs, VAT, etc.). Revenues generated from royalties are subject to quarterly and annual fluctuations. QTL revenues comprised 33%, 35% and 33% of total consolidated revenues in fiscal 2010, 2009 and 2008, respectively.

As part of our strategy to expand the marketplace and generate new and ongoing licensing revenues, significant resources are allocated to develop leading-edge technology for the telecommunications industry. In addition to licensing manufacturers of subscriber and network equipment, we have made our essential CDMA and OFDMA patents available to competitors of our QCT segment. We have entered into such agreements with QCT competitors, including Broadcom, Fujitsu, Icera, Infineon (Intel recently announced an agreement to acquire Infineon's Wireless Solutions business), Mediatek, NEC, Renesas Electronics, Texas Instruments and VIA Telecom. These agreements generally permit the manufacture of CDMA-based and/or OFDMA-based integrated circuits and/or baseband software for use on such integrated circuits. In exchange for these rights, we receive rights that allow us to use certain intellectual property rights of these companies for specified purposes. In every case, these agreements do not allow such integrated circuit suppliers to pass through rights under Qualcomm's patents to their customers for use in wireless devices manufactured or sold by such suppliers' customers, and such customers' sales of CDMA-, WCDMA- and OFDMA-based cellular devices into which such suppliers' integrated circuits are incorporated require separate licensing arrangements with us in order to use our patented technologies.

We face competition in the development of intellectual property for future generations of digital wireless communications technology and services. On a worldwide basis, we currently compete primarily with the GSM/GPRS/EDGE digital wireless telecommunications technologies. GSM has been utilized extensively in Europe, much of Asia other than Japan and South Korea, and certain other countries. To date, GSM has been more widely adopted than CDMA, however, CDMA technologies have been adopted for all 3G wireless systems. In addition, most GSM operators have deployed GPRS, a packet data technology, as a 2G bridge technology, and a number of GSM operators have deployed or are expected to deploy EDGE, while considering the use of 3G WCDMA for their system. A limited number of wireless operators have commercially deployed and other wireless operators have started testing OFDMA technology (e.g., LTE, WiMax), a multi-carrier transmission technique not based on CDMA technology, which divides the available spectrum into many carriers, with each carrier being modulated at a low data rate relative to the combined rate for all carriers. According to Global mobile Suppliers Association, in its October 2010 reports, 113 operators have committed to deploy LTE networks, an OFDMA-based technology. We have invested in both the acquisition and the development of OFDMA technology and intellectual property. We expect that upon the deployment of OFDMA-based networks, the products implementing such technologies generally will be multimode and will also implement CDMA-based technologies. The licenses granted under our existing CDMA license agreements generally cover multimode CDMA/OFDMA devices, and our licensees are obligated to pay royalties

under their agreements for such devices. Further, nine companies have royalty-bearing licenses under our patent portfolio for use in OFDMA products (that do not implement any CDMA-based standards).

**Qualcomm Wireless & Internet Segment (QWI).** QWI revenues comprised 6%, 6% and 7% of total consolidated revenues in fiscal 2010, 2009 and 2008, respectively. The four divisions aggregated into QWI are:

**Qualcomm Internet Services (QIS).** The QIS division offers a set of software products and content enablement services to support and accelerate the growth and advancement of the wireless data market. QIS offers Brew products and services for wireless applications development, device configuration, application distribution and billing and payment. Brew services are offered by operators worldwide, reaching a base of more than 250 million devices. In addition, QIS offers Plaza products and services that enable mobile shopping experiences across various

**Table of Contents**

platforms and devices. Plaza services are being provided to TIM Brazil, an operator with 40 million subscribers, in support of their TIM AppShop offering and América Móvil, a service provider with 18 operator properties in Latin America and a subscriber base of more than 210 million. Plaza currently supports Telcel Mexico's widget solution and will soon expand services across additional América Móvil operators in Latin America. We also offer Xiam wireless content discovery and recommendation products to help wireless operators improve usage and adoption of digital content and services by presenting relevant and targeted offers to customers across all digital channels. This recommendations technology is offered as a standalone product, as well as integrated as part of our core product offerings (Brew and Plaza), to help wireless operators spur wireless data growth. The QChat product enables one-to-one (private) and one-to-many (group) push-to-talk calls over 3G networks. The technology also allows over-the-air upgrades of mobile device software, management of group membership by subscribers and ad-hoc creation of chat groups. QChat uses Voice over Internet Protocol (VoIP) technologies, thereby sending voice information in digital form over IP-based data networks in discrete packets rather than the traditional circuit-switched protocols of the public switched telephone network. The QPoint product enables wireless operators to offer enhanced 911 (E-911) wireless emergency and other location-based applications and services.

The QIS division develops and sells business-to-business products and services to companies worldwide, through a sales and marketing team headquartered in San Diego, California with offices worldwide. The QIS sales and marketing strategy is to enter into agreements with companies in target markets by providing comprehensive technology and services that combine wireless Internet, data and voice capabilities. We have numerous current and emerging competitors for each of our products and services whose relative degree of success in the markets they serve may adversely impact our margins and market share. Competing offerings to the Brew and Plaza products include device manufacturer application and widget stores, such as Apple's App Store for the iPhone platform, operator-focused application and widget retailing and content distribution solutions and direct-to-consumer mobile storefronts. Additionally, specialized software and service providers may offer key components of a complete mobile content retailing product to operators or device manufacturers seeking to build their own branded offerings internally. Our Xiam content discovery and recommendations product faces competition from a small number of wireless operator-focused product providers and from emerging Web-based content recommendations engines. Additionally, some larger software providers and device manufacturers may attempt to build competing recommendations solutions internally. Our QChat product competes with numerous push-to-talk services including iDEN, which is used principally in the United States and Latin America. The push-to-talk services market is nascent outside of the United States with several competing standards- and non-standards-based technologies.

*Qualcomm Enterprise Services (QES)*. The QES division provides equipment, software and services to enable companies to wirelessly connect with their assets and workforce. QES offers satellite- and terrestrial-based two-way wireless connectivity and position location services to transportation and logistics fleets and other enterprise companies that permit customers to track the location and monitor performance of their assets, communicate with their personnel and collect data. The QES division markets and sells products through a sales force, partnerships and distributors based in the United States, Europe, Latin America, Asia and Canada. Through September 2010, we have shipped approximately 1,423,000 satellite- and terrestrial-based mobile information units. Wireless transmissions and position tracking for satellite-based systems are provided by using leased transponders on commercially available geostationary Earth orbit satellites. The terrestrial-based systems use wireless digital and analog terrestrial networks for messaging transmission and the global positioning system constellation for position tracking. We generate revenues from sales of network products and terminals, and information and location-based service and license fees.

In the United States and Mexico, we manufacture mobile communications equipment, sell related software packages and provide ongoing messaging and maintenance services. Message transmissions for operations in the United States are formatted and processed at our Network Management and Data Center in San Diego, California, with a fully-redundant backup Network Management and Data Center located in Las Vegas, Nevada.

Existing competitors of our QES division offering alternatives to our products are aggressively pricing their products and services and could continue to do so in the future. In our domestic markets, we face over ten key competitors to our satellite- and terrestrial-based mobile fleet management and asset tracking products and services. Internationally, we face several key competitors in Europe and Mexico. These competitors are offering new

value-added products and services similar in many cases to our existing or developing technologies. Emergence of new competitors, particularly those offering low-cost terrestrial-based products and current, as well as future, satellite-based systems, may impact margins and intensify competition in new markets. Similarly, some original equipment manufacturers (OEMs) of trucks and truck components are beginning to offer built-in, on-board communications and position location reporting systems that may impact our margins and intensify competition in our current and

**Table of Contents**

new markets. We are currently in discussions with some trucking manufacturers about using our products as their embedded solution.

**Qualcomm Government Technologies (QGOV).** The QGOV division provides development, hardware and analytical expertise involving wireless communications technologies to United States government (USG) agencies. QGOV adapts, integrates and ships CDMA2000 1X and EV-DO deployable base stations to the USG. QGOV also developed and launched a Brew-based application providing encryption on mobile devices. Based on the percentage of QGOV revenues to our total consolidated revenues, the USG is not a major customer.

**Firethorn.** In fiscal 2011, Firethorn expects to introduce a new product application trademarked as SWAGG, which will be marketed on a standalone basis directly to consumers. SWAGG's core features include access to merchant loyalty accounts and plastic gift card balances; purchase and gift of virtually stored-value gift cards delivered via mobile devices; and access to relevant and targeted offers from participating merchants. Distribution of SWAGG will initially be limited to certain smartphones, and content will be sourced from merchants, primarily through open platforms. In addition, Firethorn provides a single, secure, certified application embedded on select wireless devices, which enables financial institutions and merchants to deliver branded services to consumers through the wireless devices.

**Qualcomm Strategic Initiatives Segment (QSI).** QSI consists of our strategic investment activities, including FLO TV Incorporated, our wholly-owned wireless multimedia operator subsidiary. As part of our strategic investment activities, we intend to pursue various exit strategies at some point in the future.

**Strategic Investments.** We make strategic investments in early-stage and other companies and in wireless spectrum, such as the BWA spectrum recently won in the auction in India, that we believe will open new markets for CDMA- and OFDMA-based technologies, support the design and introduction of new CDMA and OFDMA products and services for wireless voice and internet data communications or possess unique capabilities or technology.

**FLO TV.** Our FLO TV subsidiary currently operates a nationwide multicast network in the United States based on our MediaFLO MDS and MediaFLO technology, which leverages the Forward Link Only (FLO) air interface standard. FLO TV's network uses the 700 MHz spectrum for which we hold licenses nationwide. We have commenced a restructuring plan under which we expect to exit the current FLO TV service business. Additionally, we continue to evaluate strategic options for the FLO TV business, which include, but are not limited to, operating the FLO TV network under a new wholesale service model; sale to, or joint venture with, a third party; and/or the sale of the spectrum licenses and the discontinuance of the operation of the network.

We continue to develop our MediaFLO technology to enable FLO TV and potentially other international wireless operators to optimize the low cost delivery of multimedia content to multiple wireless subscribers simultaneously. Our efforts to sell this technology internationally are being conducted by a nonreportable segment (MFT), and not by QSI, as we do not intend to pursue an exit strategy from the MFT business. Our MediaFLO technology is designed specifically to bring broadcast quality video to mobile devices efficiently and cost effectively. The MediaFLO technology operates on a dedicated broadcast network and is complementary to wireless operators currently operating on CDMA2000 1xEV-DO, WCDMA or GSM networks.

We face indirect competition to our FLO TV products and services from wireless delivery of streaming and downloadable video content via wireless operators, OEMs and other providers of mobile video content, as well as from internet video content accessed through the mobile web browser.

**Other Businesses.**

**Qualcomm MEMS Technologies (QMT).** We continue to develop display technology for the full range of consumer-targeted mobile products. QMT's IMOD display technology, based on a MEMS structure combined with thin film optics and sold under the mirasol brand, is expected to provide performance, power consumption and cost benefits as compared to current display technologies. With the inclusion of color displays in all types of wireless devices, including models at the low end of the market, the cost of the display has become an even more significant factor in the overall cost of the device. An IMOD display should cost less to manufacture than a comparable liquid crystal display because it requires fewer components and processing steps, thus supporting advanced multimedia capabilities on all tiers of mobile devices.

*MediaFLO Technologies (MFT)*. MFT is comprised of the FLO Technology group, which continues to develop our MediaFLO technology, and the FLO International group, which markets MediaFLO for deployment outside of the United States. Global market awareness of MediaFLO technology has been increasing through a number of successful trials in the United Kingdom, Taiwan, Hong Kong and Malaysia.

## **Table of Contents**

In addition, we are pursuing international opportunities to market and deploy MediaFLO technology worldwide. The FLO air interface is an open, globally-recognized technology standardized by the Telecommunications Industry Association and the European Telecommunications Standards Institute. It is also recommended by the International Telecommunication Union's Radiocommunication Sector for the broadcasting of multimedia and data applications.

### **Research and Development**

The wireless telecommunications industry is characterized by rapid technological change, requiring a continuous effort to enhance existing products and develop new products and technologies. Our research and development team has a demonstrated track record of innovation in wireless communications technologies. Our research and development expenditures in fiscal 2010, 2009 and 2008 totaled approximately \$2.5 billion, \$2.4 billion and \$2.3 billion, respectively, and as a result, continue to expand our intellectual property portfolio. Research and development expenditures were primarily related to the development of integrated circuit products, next generation CDMA and OFDMA technologies and other initiatives to support the acceleration of advanced wireless products and services, including lower cost devices, the integration of wireless with consumer electronics and computing, the convergence of multiband, multimode, multinetwork products and technologies, third-party operating systems and services platforms. The technologies supporting these initiatives may include CDMA2000 1X, 1xEV-DO, EV-DO Revision A, EV-DO Revision B, 1x Advanced, WCDMA, HSDPA, HSUPA, HSPA+ and LTE. Research and development expenditures were also incurred related to the development of our MediaFLO technology, MediaFLO MDS, mirasol display products using MEMS technology, Brew products and mobile commerce applications.

We have research and development centers in various locations throughout the world that support our global development activities and ongoing efforts to advance CDMA, OFDMA and a broad range of other technologies. We continue to use our substantial engineering resources and expertise to develop new technologies, applications and services and make them available to licensees to help grow the wireless telecommunications market and generate new or expanded licensing opportunities. In addition to internally sponsored research and development, we perform contract research and development for various government agencies and commercial contractors.

### **Sales and Marketing**

Sales and marketing activities of our operating segments are discussed under Operating Segments in Item 1. Other marketing activities include public relations, web-marketing, participation in technical conferences and trade shows, development of business cases and white papers, competitive analyses, market intelligence and other marketing programs, such as cooperative marketing with our customers. Corporate Marketing provides company information on our Internet site and through other media regarding our products, strategies and technology to industry analysts and for publications.

### **Competition**

Competition to our operating segments is discussed under Operating Segments in Item 1. Competition in the wireless industry throughout the world continues to increase at a rapid pace as consumers, businesses and governments realize the market potential of wireless telecommunications products and services. We have facilitated competition in the wireless market by licensing and enabling a large number of manufacturers. Although we have attained a significant position in the industry, many of our current and potential competitors may have advantages over us, which include, among others: motivation by our customers in certain circumstances to find alternate suppliers or choose alternate technologies; and government support of other technologies (e.g., GSM). In addition, our competitors may have established more extensive relationships with indigenous distribution and original equipment manufacturer companies in developing territories (e.g., China). These relationships may affect customers' decisions to purchase products or license technology from us. Accordingly, new competitors or alliances among competitors could emerge and rapidly acquire significant market share to our detriment.

We may face competition throughout the world with new technologies and services introduced in the future as additional competitors enter the marketplace for products based on 3G standards, OFDMA-based technologies or other wireless technologies. Although we intend to continue to develop improvements to existing technologies, as well as potential new technologies, there may be a continuing competitive threat from companies introducing alternative versions of wireless technologies. It is also possible that the price we charge for our products and services may continue to decline as competition continues to intensify.

**Patents, Trademarks and Trade Secrets**

We rely on a combination of patents, copyrights, trade secrets, trademarks and proprietary information to maintain and enhance our competitive position. We have an extensive portfolio of United States and foreign patents, and we continue to pursue patent applications around the world. Our patents have broad coverage in many countries, including China, Japan, South Korea, Europe, Brazil, India, Taiwan and elsewhere. A substantial portion of our

**Table of Contents**

patents and patent applications relate to digital wireless communications technologies, including patents that are essential or may be relevant to CDMA2000, WCDMA (UMTS), TD-SCDMA, TD-CDMA and OFDMA products.

Standards bodies have been informed that we hold patents that might be essential for all 3G standards that are based on CDMA. We have committed to such standards bodies that we will offer to license our essential patents for these CDMA standards on a fair and reasonable basis free from unfair discrimination. We have also informed standards bodies that we hold patents that might be essential for certain standards that are based on OFDMA technology (e.g., 802.16e, 802.16m and LTE (including FDD and TDD versions)).

Since our founding in 1985, we have focused heavily on technology development and innovation. These efforts have resulted in a leading intellectual property portfolio related to, among other things, wireless technology. Because all commercially deployed forms of CDMA and their derivatives require the use of our patents, our patent portfolio is the most widely and extensively licensed portfolio in the industry with over 185 licensees. Over the years a number of companies have challenged our patent position but at this time most, if not all, companies recognize that any company seeking to develop, manufacture and/or sell products that use CDMA technologies will require a license or other rights to use our patents.

As part of our strategy to generate licensing revenues that continue to support our research and development investments and support worldwide adoption of our CDMA technology, we provide rights to design, manufacture and sell products utilizing certain portions of our intellectual property to other companies, including those companies listed on our Internet site ([www.qualcomm.com](http://www.qualcomm.com)).

In all cases, we have licensed or otherwise provided rights to use our patented technologies to interested companies on terms that are fair, reasonable and free from unfair discrimination. Unlike some other companies in our industry that hold back certain key technologies, we offer interested companies essentially our entire patent portfolio for use in cellular devices and cell site infrastructure equipment. Our strategy to broadly make available our patented technologies has been a catalyst for industry growth, helping to enable a wide range of companies offering a broad array of wireless products and features while driving down average and low-end selling prices for 3G handsets and other wireless devices. By licensing or otherwise providing rights to a wide range of equipment manufacturers, encouraging innovative applications, supporting equipment manufacturers with a total chipset and software solution, and focusing on improving the efficiency of the airlink for wireless operators, we have helped 3G CDMA evolve, grow and reduce device pricing all at a faster pace than the second generation technologies that preceded it (e.g., GSM).

Under our subscriber, infrastructure and test equipment license agreements, licensees are generally required to pay us a license fee as well as ongoing royalties based on a percentage of the wholesale (i.e., licensee's) selling price, net of certain permissible deductions (e.g., certain shipping costs, packing costs, VAT, etc.), of each licensed product and/or a fixed per unit amount. License fees are paid in one or more installments, while royalties generally are payable based on ongoing sales throughout the life of the licensed patents. Our licensing terms are reasonable and fair to the companies that benefit from our intellectual property and provide significant incentives for others to invest in CDMA (including WCDMA) applications, as evidenced by the significant growth in the CDMA portion of the wireless industry and the number of CDMA participants. Our license agreements generally provide us rights to use certain of our licensees' technology and intellectual property rights to manufacture and sell certain components (e.g., Application-Specific Integrated Circuits) and related software, subscriber units and/or infrastructure equipment. In most cases, our use of our licensees' technology and intellectual property does not require us to pay ongoing royalties based on the sale of our products. However, under some of the licenses, if we incorporate certain of the licensed technology or intellectual property into certain products, we are obligated to pay royalties on the sale of such products.

**Corporate Responsibility**

At Qualcomm, we realize we have a significant role to play as we strive to better both our local and global communities through ethical business practices, socially empowering technology applications, educational and environmental programs and employee diversity and volunteerism.

*Community Involvement.* We are dedicated to developing and strengthening communities worldwide and believe that involvement with community organizations is an important avenue for our employees to develop as professionals and as citizens.

*Diversity.* We strongly believe in fostering an inclusive work environment globally and are committed to advancing opportunities for all employees and encouraging diversity through the workforce.

## **Table of Contents**

*Environmental Health and Safety.* We take a proactive approach to programs and techniques that contribute to a better environment for our local communities as well as our employees.

*Corporate Sustainability.* We are committed to energy efficiency, renewable energy and sustainable best practices to reduce our carbon footprint.

*Wireless Reach.* We believe access to advanced wireless voice and data services improves people's lives. Qualcomm's Wireless Reach initiative supports programs and solutions that bring the benefits of connectivity to underserved communities globally. By working with partners, Wireless Reach projects create new ways for people to communicate, learn, access health care, sustain the environment and reach global markets.

## **Employees**

At September 26, 2010, we employed approximately 17,500 full-time, part-time and temporary employees. During fiscal 2010, the number of employees increased by approximately 1,400 primarily due to increases in engineering resources.

## **Available Information**

Our Internet address is [www.qualcomm.com](http://www.qualcomm.com). There we make available, free of charge, our annual report on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and any amendments to those reports, as soon as reasonably practicable after we electronically file such material with, or furnish it to, the Securities and Exchange Commission (SEC). We also make available on our Internet site public financial information for which a report is not required to be filed with or furnished to the SEC. Our SEC reports and other financial information can be accessed through the investor relations section of our Internet site. The information found on our Internet site is not part of this or any other report we file with or furnish to the SEC.

The public may read and copy any materials that we file with the SEC at the SEC's Public Reference Room located at 100 F Street, N.E., Washington, D.C. 20549. The public may obtain information on the operation of the Public Reference Room by calling the SEC at (202) 551-8090. The SEC also maintains electronic versions of our reports on its website at [www.sec.gov](http://www.sec.gov).

## **Executive Officers**

Our executive officers (and their ages at September 26, 2010) are as follows:

Paul E. Jacobs, age 47, has served as Chairman of the Board of Directors since March 2009, as a director since June 2005 and as Chief Executive Officer since July 2005. He served as Group President of the Qualcomm Wireless & Internet (QWI) Group from July 2001 to June 2005. In addition, he served as Executive Vice President from February 2000 to June 2005. Dr. Jacobs has been a director of A123 Systems, Inc., a lithium-ion battery developer and manufacturer, since November 2002. Dr. Jacobs holds a B.S. degree in Electrical Engineering and Computer Science, an M.S. degree in Electrical Engineering and a Ph.D. degree in Electrical Engineering and Computer Science from the University of California, Berkeley. Dr. Paul Jacobs is the son of Dr. Irwin Mark Jacobs, a director of the Company.

Steven R. Altman, age 49, has served as President since July 2005. He served as Executive Vice President from November 1997 to June 2005 and as President of Qualcomm Technology Licensing (QTL) from September 1995 to April 2005. Mr. Altman served as a director of Amylin Pharmaceuticals, Inc. from March 2006 to April 2010. Mr. Altman holds a B.S. degree in Political Science and Administration from Northern Arizona University and a J.D. from the University of San Diego.

Derek K. Aberle, age 40, has served as Executive Vice President and as President of QTL since September 2008. From October 2006 to September 2008, he served as Senior Vice President and as General Manager of QTL. Mr. Aberle joined Qualcomm in December 2000 and prior to October 2006 held positions ranging from Legal Counsel to Vice President and General Manager of QTL. Mr. Aberle holds a B.A. degree in Business Economics from the University of California, Santa Barbara and a J.D. from the University of San Diego.

Andrew M. Gilbert, age 47, has served as Executive Vice President and President of Qualcomm Europe since September 2010. He served as Executive Vice President and President of Qualcomm Internet Services (QIS) and Qualcomm Europe from May 2009 to September 2010, Executive Vice President and President of QIS, MediaFLO Technologies (MFT) and Qualcomm Europe from January 2008 to May 2009, as Senior Vice President and President of Qualcomm Europe from November 2006 to January 2008 and as President of Qualcomm Europe from

February 2006 to November 2006. Mr. Gilbert joined Qualcomm in January 2006 as Vice President of Qualcomm

**Table of Contents**

Europe. Prior to joining Qualcomm, he served as Vice President and General Manager of Flarion Technologies European, Middle Eastern and African regions from May 2002 to January 2006.

Margaret Peggy L. Johnson, age 48, has served as Executive Vice President of the Americas and India since January 2008 and as Executive Vice President since December 2006. She served as President of MFT from December 2005 to January 2008 and as President of QIS from July 2001 to January 2008. She served as Senior Vice President and General Manager of QIS from September 2000 to July 2001. Ms. Johnson holds a B.S. degree in Electrical Engineering from San Diego State University.

William E. Keitel, age 57, has served as Executive Vice President since December 2003 and as Chief Financial Officer since February 2002. He previously served as Senior Vice President and as Corporate Controller from May 1999 to February 2002. Mr. Keitel holds a B.A. degree in Business Administration from the University of Wisconsin and an M.B.A. from Arizona State University.

James P. Lederer, age 50, has served as Executive Vice President and General Manager of Qualcomm CDMA Technologies (QCT) since May 2009. He served as Executive Vice President, QCT Business Planning and Finance from May 2008 to May 2009, Senior Vice President, QCT Finance from April 2005 to April 2008, Vice President, Finance from July 2001 to April 2005 and Senior Director, Finance from October 2000 to July 2001. Mr. Lederer joined Qualcomm in 1997 as Senior Manager, Corporate Finance. Mr. Lederer holds a B.S. degree in Business Administration (Finance/MIS) and an M.B.A. from the State University of New York at Buffalo.

Steven M. Mollenkopf, age 41, has served as Executive Vice President and Group President since September 2010. He served as Executive Vice President and President of QCT from August 2008 to September 2010, as Executive Vice President, QCT Product Management from May 2008 to July 2008, as Senior Vice President, Engineering and Product Management from July 2006 to May 2008 and as Vice President, Engineering from April 2002 to July 2006. Mr. Mollenkopf joined Qualcomm in 1994 as an engineer and throughout his tenure at Qualcomm held several other technical and leadership roles. Mr. Mollenkopf holds a B.S. degree in Electrical Engineering from Virginia Tech and an M.S. degree in Electrical Engineering from the University of Michigan.

Roberto Padovani, age 56, has served as Executive Vice President and Chief Technology Officer since November 2001. He previously served as Executive Vice President from July 2001 to November 2001 in Corporate Research and Development and as Senior Vice President from July 1996 to July 2001. Dr. Padovani holds a Laureate degree from the University of Padova, Italy and M.S. and Ph.D. degrees from the University of Massachusetts, Amherst, all in Electrical and Computer Engineering.

Donald J. Rosenberg, age 59, has served as Executive Vice President, General Counsel and Corporate Secretary since October 2007. He served as Senior Vice President, General Counsel and Corporate Secretary for Apple Computer, Inc. from December 2006 to October 2007. From May 1975 to November 2006, Mr. Rosenberg held numerous positions at IBM Corporation, including Senior Vice President and General Counsel. Mr. Rosenberg holds a B.S. degree in Mathematics from the State University of New York at Stony Brook and a J.D. from St. John's University School of Law.

Daniel L. Sullivan, age 59, has served as Executive Vice President of Human Resources since August 2001. He previously served as Senior Vice President of Human Resources from February 1996 to July 2001. Dr. Sullivan holds a B.S. degree in Communication from Illinois State University, an M.A. degree in Communication from West Virginia University and a Ph.D. in Organization Communication from the University of Nebraska.

Jing Wang, age 48, has served as Executive Vice President of Asia Pacific, Middle East and Africa since January 2008. He previously served as Chairman, Qualcomm Asia Pacific from August 2006 to January 2008 and as Chairman, Qualcomm Greater China from March 2003 to August 2006. Mr. Wang joined Qualcomm as Senior Vice President in February 2001. Mr. Wang holds a B.A. degree in Literature from Anhui University, an LL.M from the People's University of China, Department of Law, and an LL.M from the University of Virginia School Of Law.

**Item 1A. Risk Factors**

You should consider each of the following factors as well as the other information in this Annual Report in evaluating our business and our prospects. The risks and uncertainties described below are not the only ones we face. Additional risks and uncertainties not presently known to us or that we currently consider immaterial may also impair our business operations. If any of the following risks actually occur, our business and financial results could be

harmful. In that case, the trading price of our common stock could decline. You should also refer to the other information set forth in this Annual Report, including our financial statements and the related notes.

**Table of Contents**

**Risks Related to Our Businesses**

*Our revenues are dependent on the commercial deployment of our CDMA- and OFDMA-based technologies and upgrades of 3G and 3G/4G multimode wireless communications equipment, products and services based on our technologies.*

We develop, patent and commercialize CDMA- and OFDMA-based technologies. Our revenues are dependent upon the commercial deployment of our technologies and upgrades of 3G and 3G/4G multimode wireless communications equipment, products and services based on our technologies. Our business may be harmed, and our investments in these technologies may not provide us an adequate return if:

wireless operators delay 3G and/or 3G/4G multimode deployments, expansions or upgrades;

LTE, an OFDMA-based wireless standard, is not widely deployed or commercial deployment is delayed; or

wireless operators deploy other technologies.

Our business is dependent on our ability to increase our market share and to continue to drive the adoption of our products and services into 3G, 3G/4G multimode and 4G wireless device markets. We are also dependent on the success of our customers, licensees and CDMA- and OFDMA-based wireless operators, as well as the timing of their deployment of new services. Our licensees and CDMA- or OFDMA-based wireless operators may incur lower gross margins on products or services based on our technologies than on products using alternative technologies as a result of greater competition or other factors. If commercial deployment of our technologies and upgrades to 3G, 3G/4G multimode or 4G wireless communications equipment, products and services based on our technologies do not continue or are delayed, our revenues could be negatively impacted, and our business could suffer.

*Our revenues can be impacted by the deployment of other technologies in place of CDMA- and/or OFDMA-based technologies or by the need to extend certain existing license agreements to cover additional later patents.*

Although we own a very strong portfolio of issued and pending patents related to GSM, GPRS, EDGE, OFDM, OFDMA and/or Multiple Input, Multiple Output (MIMO) technologies, our patent portfolio licensing program in these areas is less established and might not be as successful in generating licensing income as our CDMA portfolio licensing program. Many wireless operators are investigating or have selected LTE (or to a lesser extent WiMax) as next-generation technologies for deployment in existing or future spectrum bands as complementary to their existing CDMA-based networks. Although we believe that our patented technology is essential and useful to implementation of the LTE and WiMax industry standards and have granted royalty-bearing licenses to nine companies to make and sell products implementing those standards but not implementing 3G standards, we might not achieve the same royalty revenues on such LTE or WiMax products as on CDMA-based or multimode CDMA/OFDMA-based products.

The licenses granted to and from us under a number of our license agreements include only patents that are either filed or issued prior to a certain date and, in a small number of agreements, royalties are payable on those patents for a specified time period. As a result, there are agreements with some licensees where later patents are not licensed by or to us under our license agreements. In order to license any such later patents, we will need to extend or modify our license agreements or enter into new license agreements with such licensees. We might not be able to modify such license agreements in the future to license any such later patents or extend such date(s) to incorporate later patents without affecting the material terms and conditions of our license agreements with such licensees, and such modifications may impact our revenues.

*Global economic conditions that impact the wireless communications industry could negatively affect the demand for our products and our customers' products, which may negatively affect our revenues.*

Despite the recent improvements in market conditions, a future decline in global economic conditions, particularly in geographic regions with high customer concentrations, could have adverse, wide-ranging effects on demand for our products and for the products of our customers, particularly wireless communications equipment manufacturers or others in the wireless industry, such as wireless operators. Other unexpected negative events may have adverse effects on the economy, on demand for wireless device products or on wireless device inventories at equipment manufacturers and wireless operators. In addition, our direct and indirect customers' ability to purchase or pay for our

products and services, obtain financing and upgrade wireless networks could be adversely affected by economic conditions, leading to cancellation or delay of orders for our products.

*Our industry is subject to competition in an environment of rapid technological change that could result in decreased demand for our products and the products of our customers and licensees, declining average selling*

**Table of Contents**

*prices for our licensees' products and our products and/or new specifications or requirements placed upon our products, each of which could negatively affect our revenues and operating results.*

Our industry is subject to rapid technological change, and we must make substantial investments in new products, services and technologies to compete successfully. New technological innovations generally require a substantial investment before they are commercially viable. We intend to continue to make substantial investments in developing new products and technologies, and it is possible that our development efforts will not be successful and that our new technologies will not result in meaningful revenues. Our products, services and technologies face significant competition, and we cannot assure you that the revenues generated or the timing of their deployment, which may be dependent on the actions of others, will meet our expectations. Competition in the telecommunications market is affected by various factors that include, among others: evolving industry standards, evolving methods of transmission for wireless voice and data communications; value-added features that drive replacement rates and selling prices; scalability and the ability of the system technology to meet customers' immediate and future network requirements.

Our future success will depend on, among other factors, our ability to:

- continue to keep pace with technological developments;
- drive adoption of our integrated circuit products across a broad spectrum of wireless devices sold by our customers and licensees;
- develop and introduce new products, services, technologies and enhancements on a timely basis;
- effectively develop and commercialize turnkey, integrated product offerings that incorporate our integrated circuits, software, user interface and applications;
- become a preferred partner for operating system platforms, such as Android and Windows Mobile;
- focus our services businesses on key platforms that create standalone value or contribute to the success of our other businesses; and
- succeed in significant foreign markets, such as China, India and Europe.

Companies that promote non-CDMA technologies (e.g., GSM, WiMax) and companies that design CDMA-based integrated circuits are generally competitors or potential competitors. Examples (some of whom are strategic partners of ours in other areas) include Broadcom, Freescale, Fujitsu, Icera, Infineon, Intel, Marvell Technology, Mediatek, nVidia, Renesas Electronics, ST-Ericsson (a joint venture between Ericsson Mobile Platforms and ST-NXP Wireless), Texas Instruments and VIA Telecom. Many of these current and potential competitors have advantages over us that include, among others: motivation by our customers in certain circumstances to find alternate suppliers; government support of other technologies; and more extensive relationships with indigenous distribution and original equipment manufacturer (OEM) companies in developing territories (e.g., China).

In addition to the foregoing, we have seen, and believe we will continue to see, an increase in customers requesting that we develop products, including chipsets and associated software, that will incorporate open source software elements and operate in an open source environment, which may offer accessibility to a portion of a product's source code and may expose related intellectual property to adverse licensing conditions. Developing open source products, with regard to adequately protecting the intellectual property rights upon which our licensing business depends, may prove burdensome under certain circumstances, thereby placing us at a competitive disadvantage for new product designs.

Competition may reduce average selling prices for our chipset products and the products of our customers and licensees. Reductions in the average selling prices of our licensees' products, unless offset by an increase in volumes, generally result in reduced royalties payable to us. We anticipate that additional competitors will enter our markets as a result of growth opportunities in wireless telecommunications, the trend toward global expansion by foreign and domestic competitors, technological and public policy changes and relatively low barriers to entry in selected segments of the industry.

*We derive a significant portion of our consolidated revenues from a small number of customers and licensees. If revenues derived from these customers or licensees decrease, our operating results could be negatively affected.*

Our QCT segment derives a significant portion of revenues from a small number of customers. The loss of any one of our QCT segment's significant customers or the delay, even if only temporary, or cancellation of significant orders from any of these customers would reduce our revenues in the period of the deferral or cancellation and harm our

ability to achieve or sustain expected levels of operating results. Accordingly, unless and until our QCT segment

**Table of Contents**

diversifies and expands its customer base, our future success will largely depend upon the timing and size of any future purchase orders from these customers.

Although we have more than 185 licensees, our QTL segment derives a significant portion of royalty revenues from a limited number of licensees. Our future success depends upon the ability of our licensees to develop, introduce and deliver high-volume products that achieve and sustain market acceptance. We have little or no control over the sales efforts of our licensees, and our licensees might not be successful. Reductions in the average selling price of wireless communications devices sold by our major licensees, without a sufficient increase in the volumes of such devices sold, could have a material adverse effect on our revenues.

*Efforts by some telecommunications equipment manufacturers to avoid paying fair and reasonable royalties for the use of our intellectual property may create uncertainty about our future business prospects, may require the investment of substantial management time and financial resources, and may result in legal decisions and/or actions by foreign governments, Standards Development Organizations (SDOs) or other industry groups that harm our business.*

A small number of companies have initiated various strategies in an attempt to renegotiate, mitigate and/or eliminate their need to pay royalties to us for the use of our intellectual property in order to negatively affect our business model and that of our other licensees. These strategies have included (i) litigation, often alleging infringement of patents held by such companies, patent misuse, patent exhaustion and patent and license unenforceability, or some form of unfair competition, (ii) taking positions contrary to our understanding of their contracts with us, (iii) appeals to governmental authorities, (iv) collective action, including working with carriers, standards bodies, other like-minded companies and other organizations, on both formal and informal bases, to adopt intellectual property policies and practices that could have the effect of limiting returns on intellectual property innovations, and (v) lobbying with governmental regulators and elected officials for the purpose of seeking the imposition of some form of compulsory licensing and/or to weaken a patent holder's ability to enforce its rights or obtain a fair return for such rights. Some companies have proposed significant changes to existing intellectual property policies for implementation by SDOs and other industry organizations, some of which would require a maximum aggregate intellectual property royalty rate for the use of all essential patents owned by all of the member companies to be applied to the selling price of any product implementing the relevant standard. They have further proposed that such maximum aggregate royalty rate be apportioned to each member company with essential patents based upon the number of essential patents held by such company. A number of these strategies are purportedly based on interpretations of the policies of certain standards development organizations concerning the licensing of patents that are or may be essential to industry standards and our alleged failure to abide by these policies. There is a risk that relevant courts or governmental agencies will interpret those policies in a manner adverse to our interests. If such proposals and strategies are successful in the future, our business model would be harmed, either by artificially limiting our return on investment with respect to new technologies or forcing us to work outside of the SDOs or such other industry groups to promote our new technologies, and our results of operations could be negatively impacted. As well, the legal and other costs associated with defending our position have been and continue to be significant. We assume that such challenges regardless of their merits will continue into the foreseeable future and may require the investment of substantial management time and financial resources to explain and defend our position.

*The enforcement and protection of our intellectual property rights may be expensive, could fail to prevent misappropriation or unauthorized use of our proprietary intellectual property rights or could result in the loss of our ability to enforce one or more patents.*

We rely primarily on patent, copyright, trademark and trade secret laws, as well as nondisclosure and confidentiality agreements and other methods, to protect our proprietary information, technologies and processes, including our patent portfolio. Policing unauthorized use of our products and technologies is difficult and time consuming. We cannot be certain that the steps we have taken, or may take in the future, will prevent the misappropriation or unauthorized use of our proprietary information and technologies, particularly in foreign countries where the laws may not protect our proprietary intellectual property rights as fully or as readily as United States laws. We cannot be certain that the laws and policies of any country, including the United States, or the practices of any of the standards bodies, foreign or domestic, with respect to intellectual property enforcement or licensing, issuance of

spectrum licenses or the adoption of standards, will not be changed in a way detrimental to our licensing program or to the sale or use of our products or technology. We may have difficulty in protecting or enforcing our intellectual property rights and/or contracts in a particular foreign jurisdiction, including: challenges to our licensing practices under such jurisdictions competition laws; adoption of mandatory licensing provisions by foreign jurisdictions (either with controlled/regulated royalties or royalty free); and challenges pending before

**Table of Contents**

foreign competition agencies to the pricing and integration of additional features and functionality into our wireless chipset products.

A substantial portion of our patents and patent applications relate to our wireless communications technology and much of the remainder of our patents and patent applications relate to our other technologies and products. We may need to litigate to enforce our intellectual property rights, protect our trade secrets or determine the validity and scope of proprietary rights of others. As a result of any such litigation, we could lose our ability to enforce one or more patents or incur substantial unexpected operating costs. Any action we take to enforce our intellectual property rights could be costly and could absorb significant management time and attention, which, in turn, could negatively impact our operating results.

*Claims by other companies that we infringe their intellectual property or that patents on which we rely are invalid could adversely affect our business.*

From time to time, companies have asserted, and may again assert, patent, copyright and other intellectual property rights against our products or products using our technologies or other technologies used in our industry. These claims have resulted and may again result in our involvement in litigation. We may not prevail in such litigation given the complex technical issues and inherent uncertainties in intellectual property litigation. If any of our products were found to infringe on another company's intellectual property rights, we could be subject to an injunction or required to redesign our products, which could be costly, or to license such rights and/or pay damages or other compensation to such other company. If we were unable to redesign our products, license such intellectual property rights used in our products or otherwise distribute our products through a licensed supplier, we could be prohibited from making and selling such products. In any potential dispute involving other companies' patents or other intellectual property, our chipset foundries and customers could also become the targets of litigation. We are contingently liable under certain product sales, services, license and other agreements to indemnify certain customers against certain types of liability and/or damages arising from qualifying claims of patent infringement by products or services sold or provided by us. Reimbursements under indemnification arrangements could have a material adverse effect on our results of operations. Furthermore, any such litigation could severely disrupt the supply of our products and the business of our chipset customers and their wireless operator customers, which in turn could hurt our relationships with our chipset customers and wireless operators and could result in a decline in our chipset sales and/or a reduction in our licensees sales to wireless operators, causing a corresponding decline in our chipset and/or licensing revenues. Any claims, regardless of their merit, could be time consuming to address, result in costly litigation, divert the efforts of our technical and management personnel or cause product release or shipment delays, any of which could have a material adverse effect upon our operating results.

We expect that we will continue to be involved in litigation and may have to appear in front of administrative bodies (such as the U.S. International Trade Commission) to defend against patent assertions against our products by companies, some of whom are attempting to gain competitive advantage or leverage in licensing negotiations. We may not be successful in such proceedings, and if we are not, the range of possible outcomes includes everything from a royalty payment to an injunction on the sale of certain of our chipsets (and on the sale of our customers' devices using our chipsets) and the imposition of royalty payments that might make purchases of our chipsets less economical for our customers. A negative outcome in any such proceeding could severely disrupt the business of our chipset customers and their wireless operator customers, which in turn could hurt our relationships with our chipset customers and wireless operators and could result in a decline in our share of worldwide chipset sales and/or a reduction in our licensees' sales to wireless operators, causing a corresponding decline in our chipset and/or licensing revenues.

A number of other companies have claimed to own patents essential to various CDMA standards, GSM standards and OFDMA standards or implementations of OFDM and OFDMA systems. If we or other product manufacturers are required to obtain additional licenses and/or pay royalties to one or more patent holders, this could have a material adverse effect on the commercial implementation of our CDMA, GSM, OFDMA or multimode products and technologies, demand for our licensees' products and our profitability.

Other companies or entities also have commenced, and may again commence, actions seeking to establish the invalidity of our patents. In the event that one or more of our patents are challenged, a court may invalidate the patent(s) or determine that the patent(s) is not enforceable, which could harm our competitive position. If our key

patents are invalidated, or if the scope of the claims in any of these patents is limited by court decision, we could be prevented from licensing the invalidated or limited portion of such patents. Such adverse decisions could negatively impact our revenues. Even if such a patent challenge is not successful, it could be expensive and time consuming to address, divert management attention from our business and harm our reputation.

**Table of Contents**

*Our earnings and stock price are subject to substantial quarterly and annual fluctuations and to market downturns.*

The stock market in general, and the stock prices of technology-based and wireless communications companies in particular, have experienced volatility that often has been unrelated to the operating performance of any specific public company. The market price of our common stock has fluctuated in the past and is likely to fluctuate in the future as well. Factors that may have a significant impact on the market price of our stock include, among others:

- announcements concerning us or our competitors, including the selection of wireless communications technology by wireless operators and the timing of the roll-out of those systems;
- international developments, such as technology mandates, political developments or changes in economic policies;
- changes in recommendations of securities analysts;
- proprietary rights or product or patent litigation against us or against our customers or licensees;
- strategic transactions, such as spin-offs, acquisitions and divestitures;
- unexpected and/or significant changes in the average selling price of our licensees' products and our products;
- unresolved disputes with licensees that result in non-payment and/or non-recognition of royalty revenues that may be owed to us; or
- rumors or allegations regarding our financial disclosures or practices.

In the past, securities class action litigation often has been brought against a company following periods of volatility in the market price of its securities. Due to changes in the potential volatility of our stock price, we may be the target of securities litigation in the future. Securities litigation could result in substantial uninsured costs and divert management's attention and resources.

Any prolonged financial or economic crisis may result in a downturn in demand for our products or technology; the insolvency of key suppliers resulting in product delays; delays in reporting and/or payments from our licensees and/or customers; and counterparty failures negatively impacting our treasury operations.

Financial market volatility has impacted, and could continue to impact, the value and performance of our marketable securities. Net investment income could vary depending on the gains or losses realized on the sale or exchange of securities, impairment charges related to marketable securities and other investments, changes in interest rates and changes in fair values of derivative instruments. Our cash equivalent and marketable securities investments represent significant assets that may be subject to fluctuating or even negative returns depending upon interest rate movements and financial market conditions in fixed income and equity securities.

These factors affecting our future earnings are difficult to forecast and could harm our quarterly and/or annual operating results. If our earnings fail to meet the financial guidance we provide to investors, or the expectations of investment analysts or investors in any period, securities class action litigation could be brought against us and/or the market price of our common stock could decline.

*We depend upon a limited number of third-party suppliers to manufacture and test component parts, subassemblies and finished goods for our products. If these third-party suppliers do not allocate adequate manufacturing and test capacity in their facilities to produce products on our behalf, or if there are any disruptions in the operations of, or a loss of, any of these third parties, it could harm our ability to meet our delivery obligations to our customers, reduce our revenues, increase our cost of sales and harm our business.*

Our ability to meet customer demand depends, in part, on our ability to obtain timely and adequate delivery of parts and components from our suppliers. A reduction or interruption in our product supply source, an inability of our suppliers to react to shifts in product demand or an increase in component prices could have a material adverse effect on our business or profitability. The loss of a significant supplier or the inability of a supplier to meet performance and quality specifications or delivery schedules could harm our ability to meet our delivery obligations to our customers and negatively impact our revenues and business operations. In the event of a loss of, or a decision to change, a supplier, qualifying a new foundry supplier and commencing volume production or testing could involve delay and expense, resulting in possible loss of customers.

While our goal is to establish alternate suppliers for technologies that we consider critical, we rely on sole- or limited-source suppliers for some products, subjecting us to significant risks, including: possible shortages of

manufacturing capacity; poor product performance; and reduced control over delivery schedules, manufacturing

**Table of Contents**

capability and yields, quality assurance, quantity and costs. Our arrangements with our suppliers may oblige us to incur costs to manufacture and test our products that do not decrease at the same rate as decreases in pricing to our customers.

*QCT Segment.* Although we have entered into long-term contracts with our suppliers, most of these contracts do not provide for long-term capacity commitments, except as may be provided in a particular purchase order that has been accepted by our supplier. To the extent that we do not have firm commitments from our suppliers over a specific time period, or for any specific quantity, our suppliers may allocate, and in the past have allocated, capacity to the production and testing of products for their other customers while reducing capacity to manufacture or test our products. Accordingly, capacity for our products may not be available when we need it or available at reasonable prices. We have experienced capacity limitations from our suppliers, which resulted in supply constraints and our inability to meet certain customer demand. There can be no assurance that we will not experience these or other supply constraints in the future, which could result in our failure to meet customer demand. In addition, the timely readiness of our foundry suppliers to support transitions to smaller geometry process technologies could impact our ability to meet customer demand, revenues and cost expectations. The timing of acceptance of the smaller technology designs by our customers may subject us to the risk of excess inventories of earlier designs.

*QMT Division.* Our QMT division needs to form and maintain reliable business relationships with component supply partners to support the manufacture of interferometric modulator (IMOD) displays and/or modules in commercial volumes. All of our current relationships have been for the development and limited production of certain IMOD display panels and/or modules. Some or all of these relationships may not succeed or, even if they are successful, may not result in the component supply partners entering into material supply relationships with us. *Our suppliers may also be our competitors, putting us at a disadvantage for pricing and capacity allocation.*

One or more of our suppliers may obtain licenses from us to manufacture CDMA-based integrated circuits that compete with our products. In this event, the supplier could elect to allocate raw materials and manufacturing capacity to their own products and reduce deliveries to us to our detriment. In addition, we may not receive reasonable pricing, manufacturing or delivery terms. We cannot guarantee that the actions of our suppliers will not cause disruptions in our operations that could harm our ability to meet our delivery obligations to our customers or increase our cost of sales.

*Currency fluctuations could negatively affect future product sales or royalty revenues, harm our ability to collect receivables or increase the U.S. dollar cost of the activities of our foreign subsidiaries and international strategic investments.*

Our international customers sell their products to markets throughout the world, including China, India, Japan, South Korea, North America, South America and Europe. Consolidated revenues from international customers as a percentage of total revenues were greater than 90% in both fiscal 2010 and 2009. We are exposed to risk from fluctuations in currencies that could negatively affect our operating results. Adverse movements in currency exchange rates may negatively affect our business due to a number of situations, including the following, among others:

Our products and those of our customers and licensees that are sold into foreign markets may become less price-competitive as a result of adverse currency fluctuations;

Certain of our revenues, such as royalty revenues, are derived from licensee or customer sales that are denominated in foreign currencies. Weakening of currency values in selected regions could adversely affect our revenues and cash flows;

We may engage in foreign exchange hedging transactions that could affect our cash flows and earnings because they may require the payment of structuring fees, limit the U.S. dollar value of royalties from licensees' sales that are denominated in foreign currencies, cause earnings volatility if the hedges do not qualify for hedge accounting and expose us to counterparty risk if the counterparty fails to perform;

Our loan payable to banks is denominated in Indian rupees. If the U.S. dollar significantly weakens, additional cash may be required to settle this obligation and the related interest; and

Currency exchange rate fluctuations may reduce the U.S. dollar value of our marketable securities that are denominated directly or indirectly in foreign currencies.

## **Table of Contents**

*We may engage in acquisitions or strategic transactions or make investments that could result in significant changes or management disruption and fail to enhance stockholder value.*

From time to time, we engage in acquisitions or strategic transactions or make investments with the goal of maximizing stockholder value. We acquire businesses and other assets, including spectrum licenses, enter into joint ventures or other strategic transactions and purchase equity and debt securities, including minority interests in publicly-traded and private companies. Many of our strategic investments are in early-stage companies to support our business, including the global adoption of CDMA- or OFDMA-based technologies and related services. Most of our acquisitions or strategic investments entail a high degree of risk and will not become liquid until more than one year from the date of investment, if at all. Our acquisitions or strategic investments (either those we have completed or may undertake in the future) may not generate financial returns or result in increased adoption or continued use of our technologies. In some cases, we may be required to consolidate or record our share of the earnings or losses of companies in which we have acquired ownership interests. Our share of any losses will adversely affect our financial results until we exit from or reduce our exposure to these investments.

Achieving the anticipated benefits of business acquisitions depends in part upon our ability to integrate the acquired businesses in an efficient and effective manner. The integration of companies that have previously operated independently may result in significant challenges, and we may be unable to accomplish the integration smoothly or successfully. The difficulties of integrating companies include, among others: retaining key employees; maintaining important relationships of Qualcomm and the acquired business; minimizing the diversion of management's attention from ongoing business matters; coordinating geographically separate organizations; consolidating research and development operations; and consolidating corporate and administrative infrastructures.

We cannot assure you that the integration of acquired businesses with our business will result in the realization of the full benefits anticipated by us to result from the acquisitions. We may not derive any commercial value from acquired technology, products and intellectual property or from future technologies and products based on the acquired technology and/or intellectual property, and we may be subject to liabilities that are not covered by indemnification protection we may obtain.

*Defects or errors in our products and services or in the products of our customers could harm our business. If we experience product liability claims or recalls, we may incur significant expenses and experience decreased demand for our products.*

Our products are inherently complex and may contain defects and errors that are detected only when the products are in use. For example, as our chipset product complexities increase, we are required to migrate to integrated circuit technologies with smaller geometric feature sizes. The design process interface issues are more complex as we enter into these new domains of technology, which adds risk to yields and reliability. Because our products and services are responsible for critical functions in our customers' products and/or networks, such defects or errors could have an adverse impact on our customers, which could damage our reputation, harm our customer relationships and expose us to liability. Defects or impurities in our components, materials or software or those used by our customers or licensees, equipment failures or other difficulties could adversely affect our ability, and that of our customers and licensees, to ship products on a timely basis, customer or licensee demand for our products or the commitment of financial and/or engineering resources that could affect future product release schedules. Additionally, a defect or failure in our products or the products of our customers or licensees could harm our reputation and/or adversely affect the growth of 3G and 3G/4G multimode wireless markets.

Manufacturing, testing, marketing and use of our products and those of our licensees and customers entail the risk of product liability. The use of wireless devices containing our products to access untrusted content creates a risk of exposing the system software in those devices to viral or malicious attacks. We continue to expand our focus on this issue and take measures to safeguard the software from this threat. However, this issue carries the risk of general product liability claims along with the associated impacts on reputation and demand. In addition, a product liability claim or recall, whether against our licensees, customers or us, could harm our reputation and result in decreased demand for our products.

*Our Firethorn and FLO TV businesses do not currently generate operating income and may not succeed or their operating results may not meet our expectations.*

If our Firethorn and/or FLO TV businesses do not succeed, our investments in their technologies may not provide us an adequate return, and our business could be harmed. Consumer acceptance of our Firethorn service offerings will continue to be affected by competition, technology-based differences and by the operational performance, quality and reliability of our services platforms. Our FLO TV business had \$1.3 billion in assets (including \$746 million in spectrum licenses used by our FLO TV subsidiary) at September 26, 2010. We have commenced a restructuring plan

**Table of Contents**

under which we expect to exit the current FLO TV service business. In addition to our ongoing operating costs, we expect to incur restructuring charges related to this plan in the range of \$125 million to \$175 million in fiscal 2011, which are primarily related to certain contractual obligations. Additionally, we continue to evaluate strategic options for the FLO TV business, which include, but are not limited to, operating the FLO TV network under a new wholesale service; sale to, or joint venture with, a third party; and/or the sale of the spectrum licenses and the discontinuance of the operation of the network. Additional charges, including impairment of assets, may be incurred as we continue to evaluate or implement these strategic options or if we are unable to generate adequate future cash flows associated with this business.

*Our QMT division's business does not currently generate operating income and may not succeed or its operating results may not meet our expectations.*

While we continue to believe our QMT division's IMOD displays will offer compelling advantages to users of displays, there can be no assurance that our IMOD product development efforts will be successful, that we will be able to cost-effectively manufacture these new products, that we will be able to successfully market these products or that other technologies will not continue to improve in ways that reduce the advantages we anticipate from our IMOD displays. Sales of flat panel displays are currently, and we believe will likely continue to be, dominated by displays based on liquid crystal display (LCD) technology for some time. Numerous companies are making substantial investments in, and conducting research to improve characteristics of, LCDs. Additionally, several other flat panel display technologies have been, or are being, developed, including technologies for the production of organic light-emitting diode (OLED), field emission, inorganic electroluminescence, gas plasma and vacuum fluorescent displays. In each case, advances in LCD or other flat panel display technologies could result in technologies that are more cost effective, have fewer display limitations or can be brought to market faster than our IMOD technology. These advances in competing technologies might cause device manufacturers to avoid entering into commercial relationships with us or to not renew planned or existing relationships with us. Our QMT division had \$384 million in assets (including \$128 million in goodwill) at September 26, 2010. If we do not achieve adequate market penetration with our IMOD display technology, our assets may become impaired, which could negatively impact our operating results.

*Potential tax liabilities could adversely affect our results.*

We are subject to income taxes in the United States and in numerous foreign jurisdictions. Significant judgment is required in determining our provision for income taxes. Although we believe that our tax estimates are reasonable, the final determination of tax audits and any related litigation could materially differ from amounts reflected in historical income tax provisions and accruals. In such case, our income tax provision and net income in the period or periods in which that determination is made could be negatively affected. In addition, tax rules may change that may adversely affect our future reported financial results or the way we conduct our business. For example, we consider the operating earnings of certain non-United States subsidiaries to be indefinitely invested outside the United States based on estimates that future domestic cash generation will be sufficient to meet future domestic cash needs. No provision has been made for United States federal and state or foreign taxes that may result from future remittances of undistributed earnings of our foreign subsidiaries. Our future financial results and liquidity may be adversely affected if accounting rules regarding unrepatriated earnings change, if domestic cash needs require us to repatriate foreign earnings, or if the United States international tax rules change as part of comprehensive tax reform or other tax legislation.

*If wireless devices pose safety risks, we may be subject to new regulations, and demand for our products and those of our licensees and customers may decrease.*

Concerns over the effects of radio frequency emissions may have the effect of discouraging the use of wireless devices, which may decrease demand for our products and those of our licensees and customers. Interest groups have requested that the FCC investigate claims that wireless communications technologies pose health concerns and cause interference with airbags, hearing aids and medical devices. Concerns have also been expressed over the possibility of safety risks due to a lack of attention associated with the use of wireless devices while driving. Any legislation that may be adopted in response to these concerns could reduce demand for our products and those of our licensees and customers in the United States as well as foreign countries.

*Our business and operations would suffer in the event of system failures.*

Despite system redundancy, the implementation of security measures and the existence of a Disaster Recovery Plan for our internal information technology networking systems, our systems are vulnerable to damages from computer viruses, unauthorized access, energy blackouts and telecommunication failures, among other factors. Any system failure, accident or security breach that causes interruptions in our operations, or in our vendors , customers

**Table of Contents**

or licensees' operations, could result in a material disruption to our business. To the extent that any disruption or security breach results in a loss or damage to our customers' data or applications, or inappropriate disclosure of confidential information, we may incur liability as a result. In addition, we may incur additional costs to remedy the damages caused by these disruptions or security breaches.

From time to time, we install new or upgraded business management systems. To the extent such systems fail or are not properly implemented, we may experience material disruptions to our business, delays in our external financial reporting or failures in our system of internal controls, that could have a material adverse effect on our results of operations.

*We are subject to government regulation pertaining to environmental and safety laws, to our industry, products and services, to corporate governance and public disclosure and to health care.*

National, state and local environmental laws and regulations affect our operations around the world. These laws may make it more expensive to manufacture, have manufactured and sell products. It may also be difficult to comply with laws and regulations in a timely manner, and we may not have compliant products available in the quantities requested by our customers, which may have an adverse impact on our results of operations. There is also the potential for higher costs driven by climate change regulations. Our costs could increase if our vendors (e.g., third-party manufacturers or utility companies) pass on their costs to us.

As part of the development and commercialization of our IMOD display technology, we are operating both a development and a production fabrication facility. The development and commercialization of IMOD display prototypes is a complex and precise process involving restricted materials subject to environmental and safety regulations. Our failure or inability to comply with existing or future environmental and safety regulations could result in significant remediation liabilities, the imposition of fines and/or the suspension or termination of development and production activities.

Our products and services, and those of our customers and licensees, are subject to various regulations, including FCC regulations in the United States and other international regulations, as well as the specifications of national, regional and international standards bodies. The adoption of new laws or regulations, changes in the regulation of our activities, or exclusion or limitation of our technology or products by a government or standards body, could have a material adverse effect on our business, including, among other factors, changes in laws, policies, practices or enforcement affecting trade, foreign investments, licensing practices, spectrum license issuance, adoption of standards, the provision of wireless device subsidies by wireless operators to their customers, taxation, environmental protection, loans and employment.

We hold licenses to use spectrum in the United States and the United Kingdom, and we expect that licenses to use the BWA spectrum recently won in the auction in India will be assigned to us by December 2010. Our licenses to use spectrum in the United States are subject to a variety of ongoing FCC proceedings. It is impossible to predict with certainty the outcome of pending FCC or other federal or state regulatory proceedings and the potential impact to our FLO TV business or to our use of the spectrum for which we hold licenses. Unless we are able to obtain relief, existing laws and regulations may inhibit our ability to expand our business and to introduce new products and services. Furthermore, certain of our licenses in the United States are subject to minimum build-out requirements to be met at various dates beginning in June 2013. The BWA spectrum licenses will be subject to minimum build-out requirements to be met within five years of the effective date of the license. If we do not meet these requirements, the relevant government authorities could impose a fine or could rescind the license in the area(s) in which the build-out requirements are not met. Changes in the allocation of available spectrum by the countries in which we hold licenses could have a material adverse risk on our business and the value of our assets.

Changing laws, regulations and standards relating to corporate governance, public disclosure and health care may create uncertainty regarding compliance matters. New or changed laws, regulations and standards are subject to varying interpretations in many cases. As a result, their application in practice may evolve over time. We are committed to maintaining high standards of corporate governance and public disclosure and complying with laws and regulations. Evolving interpretations of new or changed legal requirements may cause us to incur higher costs as we revise current practices, policies, procedures, and/or health plans and may divert management time and attention to compliance activities. Our efforts to comply with new or changed laws, regulations and standards may fail,

particularly if there is ambiguity as to how such new or changed laws, regulations and standards should be applied in practice. Further, our board members, chief executive officer and chief financial officer could face an increased risk of personal liability in connection with the performance of their duties. As a result, we may have difficulty attracting and retaining qualified board members and executive officers, which could harm our business.

**Table of Contents**

*We may not be able to attract and retain qualified employees.*

Our future success depends largely upon the continued service of our board members, executive officers and other key management and technical personnel. Our success also depends on our ability to continue to attract, retain and motivate qualified personnel. In addition, implementing our product and business strategy requires specialized engineering and other talent, and our revenues are highly dependent on technological and product innovations. The market for such specialized engineering and other talented employees in our industry is extremely competitive. In addition, existing immigration laws make it more difficult for us to recruit and retain highly skilled foreign national graduates of U.S. universities, making the pool of available talent even smaller. Key employees represent a significant asset, and the competition for these employees is intense in the wireless communications industry. We do not have employment agreements with our key management personnel. In the event of a labor shortage, or in the event of an unfavorable change in prevailing labor and/or immigration laws, we could experience difficulty attracting and retaining qualified employees. We continue to anticipate increases in human resource needs, particularly in engineering. If we are unable to attract and retain the qualified employees that we need, our business may be harmed.

**Item 1B. Unresolved Staff Comments**

None.

**Table of Contents****Item 2. Properties**

At September 26, 2010, we occupied the indicated square footage in the owned or leased facilities described below (square footage in thousands):

<b>Number of Buildings</b>	<b>Location</b>	<b>Status</b>	<b>Total Square Footage</b>	<b>Primary Use</b>
33	United States	Owned	4,026	Executive and administrative offices, research and development, sales and marketing, service functions, manufacturing and network management hub.
32	United States	Leased	1,140	Administrative offices, research and development, sales and marketing, service functions and network management hub.
10	Mexico	Leased	317	Administrative offices, sales and marketing, service functions, manufacturing and network management hub.
7	India	Leased	408	Administrative offices, research and development and sales and marketing.
5	Taiwan	Leased	134	Administrative offices, research and development and sales and marketing.
4	China	Leased	131	Administrative offices, research and development, sales and marketing, service functions and network operating centers.
3	Korea	Leased	93	Administrative offices, research and development and sales and marketing.
1	Israel	Leased	67	Administrative offices, research and development and sales and marketing.
4	England	Leased	65	Administrative offices, research and development and sales and marketing.
1	India	Owned	56	Administrative offices, research and development and sales and marketing.
2	Canada	Leased	51	Administrative office, research and development and sales and marketing.
3	Singapore	Leased	40	Administrative offices, research and development and sales and marketing.
34	Other International	Leased	158	Administrative offices, research and development and sales and marketing.
Total square footage			6,686	

In addition to the facilities above, we own or lease approximately 232,000 square feet of properties that are leased or subleased to third parties. Our facility leases expire at varying dates through 2029 not including renewals that would be at our option. At September 26, 2010, we also lease space on base station towers and buildings

**Table of Contents**

pursuant to 570 lease arrangements for our FLO TV network. The majority of our cell site leases have an initial term of five to seven years with renewal options of up to five additional five-year periods.

Several owned and leased facilities are under construction totaling approximately 286,000 additional square feet to meet the requirements projected in our long-term business plan. In fiscal 2011, we intend to initiate construction of a manufacturing facility in Taiwan for our display business. We believe that our facilities will be suitable and adequate for the present purposes and that the productive capacity in such facilities is substantially utilized. In the future, we may need to purchase, build or lease additional facilities to meet the requirements projected in our long-term business plan.

**Item 3. Legal Proceedings**

*Tessera, Inc. v. QUALCOMM Incorporated:* On April 17, 2007, Tessera filed a patent infringement lawsuit in the United States District Court for the Eastern Division of Texas and a complaint with the United States International Trade Commission (ITC) pursuant to Section 337 of the Tariff Act of 1930 against us and other companies, alleging infringement of two patents relating to semiconductor packaging structures and seeking monetary damages and injunctive and other relief. The District Court action is stayed pending resolution of the ITC proceeding, including appeals. The U.S. Patent and Trademark Office's (USPTO) Central Reexamination Unit has issued office actions rejecting all of the asserted patent claims on the grounds that they are invalid in view of certain prior art and has made these rejections final. Tessera has appealed the rejections to the Board of Appeals and Interferences. On December 1, 2008, the ITC Administrative Law Judge (ALJ) ruled that the patents are valid but not infringed. On May 20, 2009, however, the ITC reversed the ALJ's determination that the patents were not infringed, and it issued the following remedial orders: (1) a limited exclusion order that bans us and the other named respondents from importing into the United States the accused chip packages (except to the extent those products are licensed) and (2) a cease and desist order that prohibits us from engaging in certain domestic activities respecting those products. The President declined to review the decision. We and other respondents appealed. Oral argument was held on June 9, 2010, and the appellate court decision is expected within the next several months. During the period of the exclusion order, which has since expired as described below, we shifted supply of accused chips for the United States market to a licensed supplier of Tessera, and we continued to supply the United States market without interruption. The subject patents expired on September 24, 2010, at which time the ITC orders ceased to be operative.

*Korea Fair Trade Commission (KFTC) Complaint:* Two U.S. companies (Texas Instruments and Broadcom) and two South Korean companies (Nextreaming and Thin Multimedia) filed complaints with the KFTC alleging that certain of our business practices violate South Korean antitrust regulations. As a result of its agreement with us, Broadcom withdrew its complaint to the KFTC in May 2009. After a hearing, the KFTC announced its ruling via press release in July 2009. On January 4, 2010, the KFTC issued its written decision, explaining its ruling that we violated South Korean law by offering certain discounts and rebates for purchases of its CDMA chips and for including in certain agreements language requiring the continued payment of royalties after all licensed patents have expired. The KFTC levied a fine of 273.2 billion Korean won, for which we accrued a \$230 million charge in fiscal 2009, and ordered us to cease the practices at issue. In February 2010, we filed a complaint against the KFTC with the Seoul High Court appealing the KFTC's written decision. We do not anticipate that the cease and desist remedies ordered will have a material effect on the results of our operations. In July 2009, the KFTC also announced that it would continue its review of our integration of multimedia functions into our chips, but it has not announced any decisions in that regard. We believe that our practices do not violate South Korean competition law, are grounded in sound business practice and are consistent with our customers' desires.

*Japan Fair Trade Commission (JFTC) Complaint:* The JFTC received unspecified complaints alleging that our business practices are, in some way, a violation of Japanese law. On September 29, 2009, the JFTC issued a cease and desist order (CDO) concluding that our Japanese licensees were forced to cross-license patents to us on a royalty-free basis and were forced to accept a provision under which they agreed not to assert their essential patents against our other licensees who made a similar commitment in their license agreements with us. The CDO seeks to require us to modify our existing license agreements with Japanese companies to eliminate these provisions while preserving the license of our patents to those companies. We disagree with the conclusions that we forced our Japanese licensees to agree to any provision in the parties' agreements and that those provisions violate Japan's Anti-Monopoly Act. We have

invoked our right under Japanese law to an administrative hearing before the JFTC. In February 2010, the Tokyo High Court granted our motion and issued a stay of the CDO pending the administrative hearing before the JFTC. The JFTC has had four hearing days to date, with two additional hearing days scheduled through February 2011, and additional hearing days yet to be scheduled.

**Table of Contents**

*Icera Complaint to the European Commission:* On June 7, 2010, the European Commission (the Commission) notified and provided us with a redacted copy of a complaint filed with the Commission by Icera, Inc. alleging that we have engaged in anticompetitive activity. We have been asked by the Commission to submit a preliminary response to the portions of the Complaint disclosed to it, and we submitted our response in July 2010. We will cooperate fully with the Commission.

*Panasonic Arbitration:* On August 5, 2009, Panasonic filed an arbitration demand alleging that it does not owe royalties, or owes less royalties, on its WCDMA subscriber devices sold on or after December 21, 2008, and that we breached the license agreement between the parties as well as certain commitments to standards setting organizations. On January 31, 2010, Panasonic amended the arbitration demand to include claims based on alleged misrepresentations and the Japanese Antimonopoly Act and increased its claim for damages to include royalties it has paid on its WCDMA subscriber devices sold prior to December 21, 2008. The arbitration demand seeks declaratory relief regarding the amount of royalties due and payable by Panasonic, as well as the return of certain royalties it had previously paid. We have responded to the arbitration demand, denying the allegations and requesting judgment in our favor on all claims. The arbitration hearing is proceeding in phases. The first phase hearing was completed in July 2010. On October 15, 2010, the arbitrator issued an interim order finding that we did not breach the license agreement. Additional phases to address the other claims and allegations noted above have not yet been scheduled. Although we believe Panasonic's claims are without merit, we have deferred the recognition of revenue related to WCDMA subscriber unit royalties reported and paid by Panasonic in the fourth quarter of fiscal 2009 and in fiscal 2010.

*Formal Order of Private Investigation:* On September 8, 2010, we were notified by the SEC's Los Angeles Regional office of a formal order of private investigation. We understand that the investigation arose from a whistleblower's allegations made in December 2009 to the audit committee of our Board of Directors and to the SEC. The audit committee has conducted an internal review with the assistance of independent counsel and independent forensic accountants. This recently concluded internal review into the allegations and related accounting practices did not identify any errors in our financial statements. We continue to cooperate with the SEC's ongoing investigation.

*Other:* We have been named, along with many other manufacturers of wireless phones, wireless operators and industry-related organizations, as a defendant in purported class action lawsuits, and individually filed actions pending in federal court in Pennsylvania and Washington D.C. superior court, seeking monetary damages arising out of our sale of cellular phones.

While there can be no assurance of favorable outcomes, we believe the claims made by other parties in the foregoing matters are without merit and will vigorously defend the actions. We have not recorded any accrual for contingent liabilities associated with the legal proceedings described above based on our belief that liabilities, while possible, are not probable. Further, any possible range of loss cannot be reasonably estimated at this time. We are engaged in numerous other legal actions not described above arising in the ordinary course of our business and, while there can be no assurance, we believe that the ultimate outcome of these actions will not have a material adverse effect on our operating results, liquidity or financial position.

**Item 4. (Removed and Reserved)**

**Table of Contents****PART II****Item 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities****Market Information**

Our common stock is traded on the NASDAQ Global Select Market under the symbol QCOM. The following table sets forth the range of high and low sales prices on the NASDAQ Stock Market of the common stock for the fiscal periods indicated, as reported by NASDAQ. Such quotations represent inter-dealer prices without retail markup, markdown or commission and may not necessarily represent actual transactions.

	<b>High (\$)</b>	<b>Low (\$)</b>
<b>2009</b>		
First quarter	45.57	28.16
Second quarter	39.70	32.64
Third quarter	46.73	37.32
Fourth quarter	48.72	42.67
<b>2010</b>		
First quarter	46.35	40.15
Second quarter	49.80	35.46
Third quarter	43.39	34.28
Fourth quarter	44.97	31.63

At November 1, 2010, there were 8,838 holders of record of our common stock. On November 1, 2010, the last sale price reported on the NASDAQ Stock Market for our common stock was \$45.33 per share.

**Dividends**

On March 3, 2009, we announced an increase in our quarterly dividend from \$0.16 to \$0.17 per share on our common stock. On March 1, 2010, we announced an increase in our quarterly dividend from \$0.17 to \$0.19 per share of common stock. Cash dividends announced in fiscal 2009 and 2010 were as follows (in millions, except per share data):

	<b>Per Share</b>	<b>Total</b>	<b>Cumulative by Fiscal Year</b>
<b>2009</b>			
First quarter	\$ 0.16	\$ 264	\$ 264
Second quarter	0.16	264	528
Third quarter	0.17	282	810
Fourth quarter	0.17	283	1,093
	\$ 0.66	\$ 1,093	
<b>2010</b>			
First quarter	\$ 0.17	\$ 284	\$ 284
Second quarter	0.17	279	563
Third quarter	0.19	309	872
Fourth quarter	0.19	305	1,177
	\$ 0.72	\$ 1,177	

On October 13, 2010, we announced a cash dividend of \$0.19 per share on our common stock, payable on December 22, 2010 to stockholders of record as of November 24, 2010. We intend to continue to pay quarterly dividends subject to capital availability and periodic determinations that cash dividends are in the best interests of our stockholders. Future dividends may be affected by, among other items, our views on potential future capital requirements, including those relating to research and development, creation and expansion of sales distribution channels and investments and acquisitions, legal risks, stock repurchase programs, changes in federal and state income tax law and changes to our business model.

**Table of Contents****Share-Based Compensation**

We primarily issue stock options and restricted stock units under our equity compensation plans, which are part of a broad-based, long-term retention program that is intended to attract and retain talented employees and directors and align stockholder and employee interests.

Our 2006 Long-Term Incentive Plan (2006 Plan) provides for the grant of both incentive and non-qualified stock options, restricted stock units, stock appreciation rights, restricted stock, performance units and shares and other stock-based awards. Options are granted at a price not less than the fair market value of the stock on the date of grant. Generally, options vest over periods not exceeding five years and are exercisable for up to ten years from the grant date. Restricted stock units generally vest three years from the date of grant. The Board of Directors may terminate the 2006 Plan at any time.

Additional information regarding our share-based compensation plans and plan activity for fiscal 2010, 2009 and 2008 is provided in the notes to our consolidated financial statements in this Annual Report in Notes to Consolidated Financial Statements, Note 8 Employee Benefit Plans and in our 2011 Proxy Statement under the heading Equity Compensation Plan Information.

**Issuer Purchases of Equity Securities**

Issuer purchases of equity securities during the fourth quarter of fiscal 2010 were (in millions, except per share data):

	<b>Total Number of Shares Purchased</b>	<b>Average Price Paid Per Share</b>	<b>Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs</b>	<b>Approximate Dollar Value of Shares that May Yet Be Purchased Under the Plans or Programs <sup>(2)</sup></b>
	(1)	(1)	(2)	(2)
June 28, 2010, to July 25, 2010	3.5	\$ 34.68	3.5	\$ 1,700
July 26, 2010 to August 22, 2010				1,700
August 23, 2010 to September 26, 2010				1,700
<b>Total</b>	<b>3.5</b>		<b>3.5</b>	<b>\$ 1,700</b>

(1) Average Price Paid Per Share excludes cash paid for commissions.

(2) On March 1, 2010, we announced that we had been authorized to repurchase up to \$3.0 billion of

our common stock, and \$1.7 billion of that amount remained available at September 26, 2010. The stock repurchase program has no expiration date.

### **Performance Measurement Comparison of Stockholder Return**

The following graph compares total stockholder return on our common stock since September 25, 2005 to three indices: the Standard & Poor's 500 Stock Index (the S&P 500), the Nasdaq 100 Index (Nasdaq 100) and the Nasdaq Industry Index for Communications Equipment Stocks, SIC 3660-3669 (the Nasdaq Industry). The S&P 500 tracks the aggregate price performance of the equity securities of 500 United States companies selected by Standard & Poor's Index Committee to include companies in leading industries and to reflect the United States stock market. The Nasdaq 100 tracks the aggregate price performance of the 100 largest domestic and international non-financial securities listed on the Nasdaq Stock Market based on market capitalization. The Nasdaq Industry tracks the aggregate price performance of equity securities of communications equipment companies traded on the NASDAQ Stock Market.

Our business continues to evolve along with the technology landscape and ecosystem. Our operations include licensing portions of our intellectual property to manufacturers of wireless products, sales of integrated circuits, other equipment and software, and providing services. In response to this evolution, we believe that the Nasdaq 100 is a more representative peer group than the Nasdaq Industry, which we have used historically. In addition, starting in fiscal 2010, we aligned part of our executive compensation with the performance of Qualcomm stock relative to the Nasdaq 100. To ensure that our peer benchmark is consistent with how we view and manage our business, we have elected to change our peer benchmark from the Nasdaq Industry to the Nasdaq 100 beginning in fiscal 2010. Below we present both the Nasdaq Industry and the Nasdaq 100 for comparison purposes.

**Table of Contents**

The total return for our stock and for each index assumes the reinvestment of dividends and is based on the returns of the component companies weighted according to their capitalizations at the end of each annual period. We began paying dividends on our common stock on March 31, 2003. Our common stock is traded on the NASDAQ Global Select Market and is a component of each of the S&P 500, the Nasdaq Industry and the Nasdaq 100.

**Comparison of Cumulative Total Return on Investment Since  
September 25, 2005 <sup>(1)</sup>**

The Company's closing stock price on September 24, 2010, the last trading day of the Company's 2010 fiscal year, was \$44.55 per share.

- (1) Shows the cumulative total return on investment assuming an investment of \$100 (including reinvestment of dividends) in our common stock, the S&P 500, the Nasdaq Industry and the Nasdaq 100 on September 25, 2005. All returns are reported as of our fiscal year end, which is the last Sunday in September.

**Table of Contents****Item 6. Selected Financial Data**

The following balance sheet data and statement of operations data for the five fiscal years ended September 26, 2010, September 27, 2009, September 28, 2008, September 30, 2007, and September 24, 2006 were derived from our audited consolidated financial statements. Consolidated balance sheets at September 26, 2010 and September 27, 2009 and the related consolidated statements of operations and cash flows for fiscal 2010, 2009 and 2008 and notes thereto appear elsewhere herein. The data should be read in conjunction with the annual consolidated financial statements, related notes and other financial information appearing elsewhere herein.

	Years Ended <sup>(1)</sup>

Loan payable to banks	1,086				
Capital lease obligations	221	187	142	91	58
Other long-term liabilities <sup>(2)</sup>	540	665	418	169	181
Total stockholders equity	20,858	20,316	17,944	15,835	13,406

(1) Our fiscal year ends on the last Sunday in September. The fiscal years ended September 26, 2010, September 27, 2009, September 28, 2008, and September 24, 2006 each included

52 weeks. The fiscal year ended September 30, 2007 included 53 weeks.

- (2) Other long-term liabilities in this balance sheet data exclude capital lease obligations and unearned revenues. Capital lease obligations are included in other liabilities in the consolidated balance sheets.

## **Table of Contents**

### **Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations**

In addition to historical information, the following discussion contains forward-looking statements that are subject to risks and uncertainties. Actual results may differ substantially from those referred to herein due to a number of factors, including but not limited to risks described in the section entitled Risk Factors and elsewhere in this Annual Report.

#### **Overview**

##### **Recent Developments**

Revenues of \$11.0 billion and net income of \$3.2 billion for fiscal 2010 were impacted by the following key items:

We shipped approximately 399 million Mobile Station Modem (MSM) integrated circuits for CDMA-based wireless devices, an increase of 26%, compared to approximately 317 million MSM integrated circuits in fiscal 2009. The chipset volume in fiscal 2009 was affected by the slowdown in the worldwide economy.

Total reported device sales were approximately \$105.7 billion, an increase of approximately 7%, compared to approximately \$98.5 billion in fiscal 2009. <sup>(1)</sup>

Against this backdrop, the following recent developments occurred during fiscal 2010 with respect to key elements of our business or our industry:

Worldwide wireless subscribers grew by approximately 15% to reach approximately 5.2 billion. <sup>(2)</sup>

Worldwide 3G subscribers (all CDMA-based) grew to approximately 1.15 billion, approximately 22% of total wireless subscribers, including approximately 500 million CDMA2000 1X/1xEV-DO subscribers and approximately 645 million WCDMA/HSPA/TD-SCDMA subscribers. <sup>(2)</sup>

In the handset market, CDMA-based unit shipments grew an estimated 21% year-over-year, compared to an estimated increase of 14% year-over-year across all technologies. <sup>(3)</sup>

In June 2010, we won a 20 MHz slot of Broadband Wireless Access (BWA) spectrum in four telecom circles in India as a result of the completion of the BWA spectrum auction for \$1.1 billion. We entered the BWA auction to facilitate the deployment of LTE technology as a complement to the existing 3G HSPA and EV-DO networks in India.

- <sup>(1)</sup> Total reported device sales is the sum of all reported sales in U.S. dollars (as reported to us by our licensees) of all licensed CDMA-based subscriber devices (including handsets, modules, modem cards and other subscriber devices) by our licensees during a particular period. Not all licensees report sales the same way (e.g., some licensees report sales net of permitted deductions, such as transportation, insurance and packing costs, while other licensees report sales and then identify the amount of permitted deductions in their reports), and the way in which licensees report such information may change from time to time.
- <sup>(2)</sup> According to Wireless Intelligence estimates as of November 1, 2010, for the quarter ending September 30, 2010. Wireless Intelligence estimates for CDMA2000 1X/1xEV-DO subscribers do not include Wireless Local Loop.
- <sup>(3)</sup> Based on current reports by Strategy Analytics, a global research and consulting firm, in their August 2010 Global Handset Market Share Update.

##### **Our Business and Operating Segments**

We design, manufacture, have manufactured on our behalf and market digital wireless telecommunications products and services based on our CDMA technology and other technologies. We derive revenues principally from sales of integrated circuit products, license fees and royalties for use of our intellectual property, messaging and other services and related hardware sales, software development and licensing and related services, software hosting services and services related to delivery of multimedia content. Operating expenses primarily consist of cost of

equipment and services, research and development and selling, general and administrative expenses.

We conduct business primarily through four reportable segments. These segments are: Qualcomm CDMA Technologies, or QCT; Qualcomm Technology Licensing, or QTL; Qualcomm Wireless & Internet, or QWI; and Qualcomm Strategic Initiatives, or QSI.

QCT is a leading developer and supplier of CDMA-based integrated circuits and system software for wireless voice and data communications, multimedia functions and global positioning system products. QCT's integrated circuit products and system software are used in wireless devices, particularly mobile phones, laptops, data modules, handheld wireless computers, data cards and infrastructure equipment. The integrated circuits for wireless devices include the Mobile Station Modem (MSM), Mobile Data Modem (MDM), Qualcomm Single Chip (QSC), Qualcomm Snapdragon (QSD), Radio Frequency (RF), Power Management (PM) and Bluetooth devices. These

**Table of Contents**

integrated circuits for wireless devices and system software perform voice and data communication, multimedia and global positioning functions, radio conversion between RF and baseband signals, power management and peripheral connectivity. QCT's system software enables the other device components to interface with the integrated circuit products and is the foundation software enabling manufacturers to develop devices utilizing the functionality within the integrated circuits. The infrastructure equipment integrated circuits and system software perform the core baseband CDMA modem functionality in the wireless operator's base station equipment. QCT revenues comprised 61%, 59% and 60% of total consolidated revenues in fiscal 2010, 2009 and 2008, respectively.

QCT utilizes a fabless production business model, which means that we do not own or operate foundries for the production of silicon wafers from which our integrated circuits are made. Integrated circuits are die cut from silicon wafers that have completed the assembly and final test manufacturing processes. We rely on independent third-party suppliers to perform the manufacturing and assembly, and most of the testing, of our integrated circuits. Our suppliers are also responsible for the procurement of most of the raw materials used in the production of our integrated circuits. We employ both turnkey and two-stage manufacturing business models to purchase our integrated circuits. Turnkey is when our foundry suppliers are responsible for delivering fully assembled and tested integrated circuits. Under the two-stage manufacturing business model, we purchase die from semiconductor manufacturing foundries and contract with separate third-party manufacturers for back-end assembly and test services. We refer to this two-stage manufacturing business model as Integrated Fabless Manufacturing (IFM).

QTL grants licenses or otherwise provides rights to use portions of our intellectual property portfolio, which includes certain patent rights essential to and/or useful in the manufacture and sale of certain wireless products, including, without limitation, products implementing cdmaOne, CDMA2000, WCDMA, CDMA TDD (including TD-SCDMA), GSM/GPRS/EDGE and/or OFDMA standards and their derivatives. QTL receives license fees as well as ongoing royalties based on worldwide sales by licensees of products incorporating or using our intellectual property. License fees are fixed amounts paid in one or more installments. Ongoing royalties are generally based upon a percentage of the wholesale (i.e., licensee's) selling price of licensed products, net of certain permissible deductions (e.g., certain shipping costs, packing costs, VAT, etc.). QTL revenues comprised 33%, 35% and 33% of total consolidated revenues in fiscal 2010, 2009 and 2008, respectively. The vast majority of such revenues were generated through our licensees' sales of cdmaOne, CDMA2000 and WCDMA subscriber equipment products.

QWI, which includes Qualcomm Enterprise Services (QES), Qualcomm Internet Services (QIS), Qualcomm Government Technologies (QGOV) and Firethorn, generates revenues primarily through mobile information products and services and software and software development aimed at support and delivery of wireless applications. QES sells equipment, software and services used by transportation and other companies to connect wirelessly with their assets and workforce. Through September 2010, QES has shipped approximately 1,423,000 terrestrial-based and satellite-based mobile information units. QIS provides content enablement services for the wireless industry, including Brew, the Plaza suite and other services. QIS also provides QChat push-to-talk, QPoint and other products for wireless operators. QGOV provides development, hardware and analytical expertise involving wireless communications technologies to United States government agencies. Firethorn builds and manages software applications that enable mobile commerce services. QWI revenues comprised 6%, 6% and 7% of total consolidated revenues fiscal 2010, 2009 and 2008, respectively.

QSI consists of the Company's strategic investment activities, including FLO TV Incorporated (FLO TV), our wholly-owned wireless multimedia operator subsidiary. QSI makes strategic investments in early-stage and other companies and in wireless spectrum, such as the BWA spectrum recently won in the auction in India, that we believe will open new markets for CDMA- and OFDMA-based technologies, support the design and introduction of new CDMA and OFDMA products and services for wireless voice and internet data communications or possess unique capabilities or technology. Our FLO TV subsidiary offers its service over our nationwide multicast network based on our MediaFLO Media Distribution System (MDS) and MediaFLO technology, which leverages the Forward Link Only (FLO) air interface standard. This network is utilized as a shared resource for wireless operators and their customers in the United States. FLO TV's network uses the 700 MHz spectrum for which we hold licenses nationwide. We have commenced a restructuring plan under which we expect to exit the current FLO TV service business. Additionally, we continue to evaluate strategic options for the FLO TV business, which include, but are not limited to,

operating the FLO TV network under a new wholesale service model; sale to, or joint venture with, a third party; and/or the sale of the spectrum licenses and the discontinuance of the operation of the network. As part of our strategic investment activities, we intend to pursue various exit strategies at some point in the future.

Nonreportable segments include: the Qualcomm MEMS Technologies division, which continues to develop an interferometric modulator (IMOD) display technology based on micro-electro-mechanical-system (MEMS) structure

## **Table of Contents**

combined with thin film optics; the MediaFLO Technologies division, which is comprised of the FLO Technology group, which continues to develop our MediaFLO MDS and MediaFLO technology, and the FLO International group, which markets MediaFLO for deployment outside of the United States; and other product initiatives.

### **Looking Forward**

The deployment of 3G networks enables increased voice capacity and higher data rates than prior generation networks, thereby supporting more minutes of use and a wide range of mobile broadband data applications for handsets, 3G connected computing devices and other consumer electronics. Many wireless operators are also planning to complement their existing 3G networks by deploying OFDMA-based technology, often called 4G, in new spectrum to gain additional capacity for data services. As a result, we expect continued growth in the coming years in consumer demand for 3G and 3G/4G multimode products and services around the world. As we look forward to the next several months, the following items are likely to have an impact on our business:

The worldwide transition to 3G CDMA-based networks is expected to continue. With the recently completed auction of 3G spectrum in India, we look forward to network launches and expansion of 3G in that region along with the continued expansion of 3G in China.

We expect consumer demand for advanced 3G-based devices, including smartphones, other data devices and new device categories, such as eBook readers and tablets, to continue at a strong pace. We also expect growth in lower-end 3G devices as 3G expands in emerging markets. We still face significant competition in the lower-end market from GSM-based products, particularly in emerging markets.

We expect that CDMA-based device prices will continue to segment into high and low end due to increased development of smartphones and popularity of smartphone applications on the high end and high volumes and active competition throughout the world on both the low and high end. This, along with a tempered economic recovery combined with growth in emerging markets, is expected to continue to impact the average selling price of CDMA-based devices.

We continue to invest significant resources toward the development of technology to increase the data rates available with 3G and 4G networks, wireless baseband chips, converged computing/communication chips, multimedia products, software and services for the wireless industry.

We continue to invest in the evolution of CDMA and a broad range of other technologies, such as LTE, our IMOD display technology and our Snapdragon platform, as part of our vision to enable a wide range of products and technologies.

We have commenced a restructuring plan under which we expect to exit the current FLO TV service business. Additionally, we continue to evaluate strategic options for the FLO TV business, which include, but are not limited to, operating the FLO TV network under a new wholesale service model; sale to, or joint venture with, a third party; and/or the sale of the spectrum licenses and the discontinuance of the operation of the network.

In addition to the foregoing business and market-based matters, we continue to devote resources to working with and educating participants in the wireless value chain as to the benefits of our business model in promoting a highly competitive and innovative wireless market. However, we expect that certain companies may continue to be dissatisfied with the need to pay reasonable royalties for the use of our technology and not welcome the success of our business model in enabling new, highly cost-effective competitors to their products. We expect that such companies will continue to challenge our business model in various forums throughout the world.

Further discussion of risks related to our business is presented in the Risk Factors included in this Annual Report.

### **Revenue Concentrations**

Revenues from customers in China, South Korea, Taiwan and Japan comprised 29%, 27%, 12% and 9%, respectively, of total consolidated revenues for fiscal 2010, as compared to 23%, 35%, 8% and 11%, respectively, for

fiscal 2009, and 21%, 35%, 5% and 14%, respectively, for fiscal 2008. We distinguish revenues from external customers by geographic areas based on the location to which our products, software or services are delivered and, for QTL s licensing and royalty revenues, the invoiced addresses of our licensees.

**Critical Accounting Policies and Estimates**

Our discussion and analysis of our results of operations and liquidity and capital resources are based on our consolidated financial statements, which have been prepared in accordance with accounting principles generally

**Table of Contents**

accepted in the United States. The preparation of these financial statements requires us to make estimates and judgments that affect the reported amounts of assets, liabilities, revenues and expenses, and disclosure of contingent assets and liabilities. On an ongoing basis, we evaluate our estimates and judgments, including those related to revenue recognition, valuation of intangible assets and investments, share-based payments, income taxes and litigation. We base our estimates on historical and anticipated results and trends and on various other assumptions that we believe are reasonable under the circumstances, including assumptions as to future events. These estimates form the basis for making judgments about the carrying values of assets and liabilities that are not readily apparent from other sources. By their nature, estimates are subject to an inherent degree of uncertainty. Actual results that differ from our estimates could have a significant adverse effect on our operating results and financial position. We believe that the following significant accounting policies and assumptions may involve a higher degree of judgment and complexity than others.

**Revenue Recognition.** We derive revenue principally from sales of integrated circuit products, royalties and license fees for our intellectual property, messaging and other services and related hardware sales, software development and licensing and related services, software hosting services and services related to delivery of multimedia content. The timing of revenue recognition and the amount of revenue actually recognized in each case depends upon a variety of factors, including the specific terms of each arrangement and the nature of our deliverables and obligations. Determination of the appropriate amount of revenue recognized involves judgments and estimates that we believe are reasonable, but actual results may differ from our estimates. We record reductions to revenue for customer incentive programs, including special pricing agreements and other volume-related rebate programs. Certain reductions to revenue for customer incentives are based on estimates, including our assumptions related to historical and projected customer sales volumes, market share and inventory levels.

We license or otherwise provide rights to use portions of our intellectual property portfolio, which includes certain patent rights essential to and/or useful in the manufacture and sale of certain wireless products. Licensees typically pay a license fee in one or more installments and ongoing royalties based on their sales of products incorporating or using our licensed intellectual property. License fees are recognized over the estimated period of benefit to the licensee, typically five to fifteen years. We earn royalties on such licensed products sold worldwide by our licensees at the time that the licensees' sales occur. Our licensees, however, do not report and pay royalties owed for sales in any given quarter until after the conclusion of that quarter. We recognize royalty revenues based on royalties reported by licensees during the quarter and when other revenue recognition criteria are met. From time to time, licensees will not report royalties timely due to legal disputes or other reasons, and when this occurs, the timing and comparability of royalty revenues could be affected.

**Valuation of Intangible Assets and Investments.** Our business acquisitions typically result in the recording of goodwill and other intangible assets, and the recorded values of those assets may become impaired in the future. We also acquire intangible assets in other types of transactions. At September 26, 2010, our goodwill and intangible assets, net of accumulated amortization, were \$1.5 billion and \$3.0 billion, respectively. The determination of the value of such intangible assets requires management to make estimates and assumptions that affect our consolidated financial statements. For intangible assets purchased in a business combination or received in a non-monetary exchange, the estimated fair values of the assets received (or, for non-monetary exchanges, the estimated fair values of the assets transferred if more clearly evident) are used to establish their recorded values, except when neither the values of the assets received or the assets transferred in non-monetary exchanges are determinable within reasonable limits. Valuation techniques consistent with the market approach, income approach and/or cost approach are used to measure fair value. An estimate of fair value can be affected by many assumptions which require significant judgment. For example, the income approach generally requires assumptions related to the appropriate business model to be used to estimate cash flows, total addressable market, pricing and share forecasts, competition, technology obsolescence, future tax rates and discount rates. Our estimate of the fair value of certain assets, or our conclusion that the value of certain assets is not reliably estimable, may differ materially from that determined by others who use different assumptions or utilize different business models. New information may arise in the future that affects our fair value estimates and could result in adjustments to our estimates in the future, which could have an adverse impact on our results of operations.

We assess potential impairments to intangible assets when there is evidence that events or changes in circumstances indicate that the carrying amount of an asset or asset group may not be recoverable. Our judgments regarding the existence of impairment indicators and future cash flows related to intangible assets are based on operational performance of our businesses, market conditions and other factors. Although there are inherent uncertainties in this assessment process, the estimates and assumptions we use, including estimates of future cash flows, volumes, market penetration and discount rates, are consistent with our internal planning. If these estimates or

**Table of Contents**

their related assumptions change in the future, we may be required to record an impairment charge on all or a portion of our goodwill and intangible assets. Furthermore, we cannot predict the occurrence of future impairment-triggering events nor the impact such events might have on our reported asset values. Future events could cause us to conclude that impairment indicators exist and that goodwill or other intangible assets associated with our acquired businesses are impaired. Any resulting impairment loss could have an adverse impact on our net investment income (loss).

We hold minority investments in publicly-traded companies whose share prices may be highly volatile. We also hold investments in other marketable securities, including non-investment-grade debt securities, equity and debt mutual and exchange-traded funds, corporate bonds and notes, auction rate securities and mortgage- and asset-backed securities. These investments, which are recorded at fair value with increases or decreases generally recorded through stockholders' equity as other comprehensive income or loss, totaled \$14.9 billion at September 26, 2010. We record impairment charges through the statement of operations when we believe an investment has experienced a decline that is other than temporary. The determination that a decline is other than temporary is subjective and influenced by many factors. In addition, the fair values of our strategic investments may be subject to substantial quarterly and annual fluctuations and to significant market volatility. Adverse changes in market conditions or poor operating results of investees could result in losses or an inability to recover the carrying value of the investments, thereby requiring impairment charges. When assessing these investments for an other-than-temporary decline in value, we consider such factors as, among other things, how significant the decline in value is as a percentage of the original cost, how long the market value of the investment has been below its original cost, the extent of the general decline in prices or an increase in the default or recovery rates of securities in an asset class, negative events such as a bankruptcy filing or a need to raise capital or seek financial support from the government or others, the performance and pricing of the investee's securities in relation to the securities of its competitors within the industry and the market in general and analyst recommendations, as applicable. We also review the financial statements of the investee to determine if the investee is experiencing financial difficulties. If we determine that a security price decline is other than temporary, we may record an impairment loss, which could have an adverse impact on our results of operations. During fiscal 2010, 2009 and 2008, we recorded \$111 million, \$743 million and \$502 million, respectively, in net impairment losses on our investments in marketable securities.

**Share-Based Compensation.** Share-based compensation expense recognized during fiscal 2010, 2009 and 2008 was \$615 million, \$584 million and \$543 million, respectively. Share-based compensation is measured at the grant date based on the fair value of the award and is recognized as expense over the requisite service period. We generally estimate the value of stock option awards using a lattice binomial option-pricing model. Accordingly, the fair value of an option award as determined using an option-pricing model is affected by our stock price on the date of grant as well as assumptions regarding a number of complex and subjective variables. These variables include, but are not limited to, our expected stock price volatility over the term of the awards, actual and projected employee stock option exercise behaviors, risk-free interest rates and expected dividends. For purposes of estimating the fair value of stock options, we used the implied volatility of market-traded options in our stock for the expected volatility assumption input to the binomial model. The assumption inputs related to employee exercise behavior include estimates of the post-vest forfeiture rate and suboptimal exercise factors, which are based on historical experience. In addition, judgment is required in estimating the amount of share-based awards that are expected to be forfeited. We estimate the forfeiture rate based on historical experience. To the extent our actual forfeiture rate is different from our estimate, share-based compensation expense is adjusted accordingly.

**Income Taxes.** Our income tax returns are based on calculations and assumptions that are subject to examination by the Internal Revenue Service (IRS) and other tax authorities. In addition, the calculation of our tax liabilities involves dealing with uncertainties in the application of complex tax regulations. We recognize liabilities for uncertain tax positions based on a two-step process. The first step is to evaluate the tax position for recognition by determining if the weight of available evidence indicates that it is more likely than not that the position will be sustained on audit, including resolution of related appeals or litigation processes, if any. The second step is to measure the tax benefit as the largest amount that is more than 50% likely of being realized upon settlement. While we believe we have appropriate support for the positions taken on our tax returns, we regularly assess the potential outcomes of these examinations and any future examinations for the current or prior years in determining the adequacy of our provision

for income taxes. We continually assess the likelihood and amount of potential adjustments and adjust the income tax provision, income taxes payable and deferred taxes in the period in which the facts that give rise to a revision become known. Although we believe that the estimates and assumptions supporting our assessments are reasonable, adjustments could be materially different from those which are reflected in historical income tax provisions and recorded assets and liabilities. We are participating in the IRS Compliance

**Table of Contents**

Assurance Process program whereby we endeavor to agree with the IRS on the treatment of all issues prior to filing our federal return. A benefit of participation in this program is that post-filing adjustments by the IRS are less likely to occur.

We regularly review our deferred tax assets for recoverability and establish a valuation allowance based on historical taxable income, projected future taxable income, the expected timing of the reversals of existing temporary differences and the implementation of tax-planning strategies. At September 26, 2010, gross deferred tax assets were \$2.8 billion. If we are unable to generate sufficient future taxable income in certain tax jurisdictions, or if there is a material change in the time period within which the underlying temporary differences become taxable or deductible, we could be required to increase the valuation allowance against our deferred tax assets which could result in an increase in our effective tax rate and an adverse impact on operating results.

We can only use net operating losses to offset taxable income of certain legal entities in certain tax jurisdictions. At September 26, 2010, we had unused federal, state and foreign net operating losses of \$114 million, \$284 million and \$40 million, respectively. Based upon our assessments of projected future taxable income and losses and historical losses incurred by these entities, we expect that the future taxable income of the entities in these tax jurisdictions will not be sufficient to utilize the net operating losses we have incurred through fiscal 2010. Therefore, we have provided a \$17 million valuation allowance for these net operating losses. Significant judgment is required to forecast the timing and amount of future taxable income in certain jurisdictions. Adjustments to our valuation allowance based on changes to our forecast of taxable income are reflected in the period the change is made.

We consider the operating earnings of certain non-United States subsidiaries to be indefinitely invested outside the United States based on estimates that future domestic cash generation will be sufficient to meet future domestic cash needs. We have not recorded a deferred tax liability of approximately \$4.2 billion related to the United States federal and state income taxes and foreign withholding taxes on approximately \$10.6 billion of undistributed earnings of foreign subsidiaries indefinitely invested outside the United States. Should we decide to repatriate the foreign earnings, we would have to adjust the income tax provision in the period we determined that the earnings will no longer be indefinitely invested outside the United States.

**Litigation.** We are currently involved in certain legal proceedings. Although there can be no assurance that unfavorable outcomes in any of these matters would not have a material adverse effect on our operating results, liquidity or financial position, we believe the claims are without merit and intend to vigorously defend the actions. We estimate the range of liability related to pending litigation where the amount and range of loss can be estimated. We record our best estimate of a loss when the loss is considered probable. Where a liability is probable and there is a range of estimated loss with no best estimate in the range, we record the minimum estimated liability related to the claim. As additional information becomes available, we assess the potential liability related to our pending litigation and revise our estimates. Revisions in our estimates of the potential liability could materially impact our results of operations. For example, we recorded a \$783 million charge during fiscal 2009 in connection with a litigation settlement charge related to the Settlement and Patent License and Non-Assert Agreement with Broadcom. We are engaged in numerous other legal actions arising in the ordinary course of our business and, while there can be no assurance, we believe that the ultimate outcome of these actions will not have a material adverse effect on our operating results, liquidity or financial position.

**Fiscal 2010 Compared to Fiscal 2009**

**Revenues.** Total revenues for fiscal 2010 were \$10.99 billion, compared to \$10.42 billion for fiscal 2009. Revenues from two customers of our QCT and QTL segments (each of whom accounted for more than 10% of our consolidated revenues for the period) comprised approximately 25% and 31% in aggregate of total consolidated revenues in fiscal 2010 and 2009, respectively.

Revenues from sales of equipment and services for fiscal 2010 were \$6.98 billion, compared to \$6.47 billion for fiscal 2009. The increase in revenues from sales of equipment and services was primarily due to a \$541 million increase in QCT revenues. Revenues from licensing and royalty fees for fiscal 2010 were \$4.01 billion, compared to \$3.95 billion for fiscal 2009. The increase in revenues from licensing and royalty fees was primarily due to a \$56 million increase in QTL revenues.

**Cost of Equipment and Services.** Cost of equipment and services revenues for fiscal 2010 was \$3.52 billion, compared to \$3.18 billion for fiscal 2009. Cost of equipment and services revenues as a percentage of equipment and services revenues was 50% for fiscal 2010, compared to 49% for fiscal 2009. The decrease in margin percentage was primarily attributable to the effect of increases in costs related to our FLO TV subsidiary and our QMT division, partially offset by an increase in QCT gross margin percentage. Cost of equipment and services revenues included \$42 million in share-based compensation in fiscal 2010, compared to \$41 million for fiscal 2009. Cost of equipment

**Table of Contents**

and services revenues as a percentage of equipment and services revenues may fluctuate in future periods depending on the mix of products sold and services provided, competitive pricing, new product introduction costs and other factors.

**Research and Development Expenses.** For fiscal 2010, research and development expenses were \$2.55 billion or 23% of revenues, compared to \$2.44 billion or 23% of revenues for fiscal 2009. The dollar increase is primarily attributable to a \$156 million increase in costs related to the development of integrated circuit products, next generation CDMA and OFDMA technologies and other initiatives to support the acceleration of advanced wireless products and services, including lower-cost devices, the integration of wireless with consumer electronics and computing, the convergence of multiband, multimode, multinet network products and technologies, third-party operating systems and services platforms. The increase in research and development expenses was partially offset by a \$65 million decrease in costs primarily related to the development of our asset-tracking products and services and Brew products. Research and development expenses for fiscal 2010 included share-based compensation of \$300 million, compared to \$280 million in fiscal 2009.

**Selling, General and Administrative Expenses.** For fiscal 2010, selling, general and administrative expenses were \$1.64 billion or 15% of revenues, compared to \$1.56 billion or 15% of revenues for fiscal 2009. The dollar increase was primarily attributable to a \$61 million increase in selling and marketing expenses, a \$56 million increase in patent-related costs and a \$23 million increase in employee-related expenses, partially offset by a \$62 million gain on the sale of our Australia spectrum license. Selling, general and administrative expenses for fiscal 2010 included share-based compensation of \$273 million, compared to \$263 million in fiscal 2009.

**Other Operating Expenses.** Operating expenses for fiscal 2009 included a \$783 million charge in connection with the Settlement and Patent License and Non-Assert Agreement with Broadcom and a \$230 million fine levied by the KFTC.

**Net Investment Income.** Net investment income was \$751 million for fiscal 2010, compared to a net investment loss of \$150 million for fiscal 2009. The net increase was comprised as follows (in millions):

	<b>Year Ended</b>		
	<b>September 26, 2010</b>	<b>September 27, 2009</b>	<b>Change</b>
Interest and dividend income:			
Corporate and other segments	\$ 522	\$ 513	\$ 9
QSI	8	3	\$ 5
Interest expense	(58)	(24)	(34)
Net realized gains on investments:			
Corporate and other segments	379	107	272
QSI	26	30	(4)
Net impairment losses on investments:			
Corporate and other segments	(110)	(734)	624
QSI	(15)	(29)	14
Gains on derivative instruments	3	1	2
Equity in losses of investees	(4)	(17)	13
	<b>\$ 751</b>	<b>\$ (150)</b>	<b>\$ 901</b>

During fiscal 2010, we recorded lower impairment losses and higher realized gains on marketable securities, compared to fiscal 2009. Depressed security values caused by a major disruption in the United States and foreign financial markets impacted our results in fiscal 2009 and continued to cause impairment losses in fiscal 2010, but to a much lesser extent. The increase in interest expense is primarily the result of the short-term bank loan related to the BWA spectrum recently won in the India auction.

**Income Tax Expense.** Income tax expense was \$787 million for fiscal 2010, compared to \$484 million for fiscal 2009. The annual effective tax rate was 20% for fiscal 2010, compared to 23% for fiscal 2009. The annual effective tax rate for fiscal 2010 was lower than fiscal 2009 primarily as a result of the net decrease in valuation allowance on the deferred tax asset related to capital losses and an increase in tax benefits related to foreign earnings taxed at less than the United States federal rate, partially offset by a decrease in tax benefit related to tax audits settled during the year and a decrease in research and development tax credits.

The annual effective tax rate for fiscal 2010 was 20% and only reflected the United States federal research and development credits generated through December 31, 2009, the date on which they expired. The annual effective tax

**Table of Contents**

rate for fiscal 2010 of 20% was less than the United States federal statutory rate primarily due to benefits of 22% related to foreign earnings taxed at less than the United States federal rate, 1% related to a decrease in valuation allowance recorded in fiscal 2010 on the deferred tax asset related to capital losses and 1% related to research and development tax credits, partially offset by state taxes of 5% and tax expense of 4% related to the valuation of deferred tax assets to reflect changes in California law, primarily deferred revenue that was taxable in fiscal 2010, but for which the resulting deferred tax asset will reverse in future years when the Company's state tax rate will be lower.

Deferred tax assets, net of valuation allowance, increased during fiscal 2010 primarily due to the establishment of the deferred tax asset related to revenue derived from the Company's 2008 license and settlement agreements with Nokia.

**Fiscal 2009 Compared to Fiscal 2008**

**Revenues.** Total revenues for fiscal 2009 were \$10.42 billion, compared to \$11.14 billion for fiscal 2008. Revenues from two customers of our QCT and QTL segments (each of whom accounted for more than 10% of our consolidated revenues for the period) comprised approximately 31% and 30% in aggregate of total consolidated revenues in fiscal 2009 and 2008, respectively.

Revenues from sales of equipment and services for fiscal 2009 were \$6.47 billion, compared to \$7.16 billion for fiscal 2008. The decrease in revenues from sales of equipment and services was primarily due to a \$597 million decrease in QCT revenues and a \$79 million decrease in QES revenues. Revenues from licensing and royalty fees for fiscal 2009 were \$3.95 billion, compared to \$3.98 billion for fiscal 2008. The decrease in revenues from licensing and royalty fees was primarily due to a \$26 million decrease in QIS revenues.

**Cost of Equipment and Services.** Cost of equipment and services revenues for fiscal 2009 was \$3.18 billion compared to \$3.41 billion for fiscal 2008. Cost of equipment and services revenues as a percentage of equipment and services revenues was 49% for fiscal 2009, compared to 48% for fiscal 2008. Cost of equipment and services revenues included \$41 million in share-based compensation in fiscal 2009, compared to \$39 million in fiscal 2008.

**Research and Development Expenses.** For fiscal 2009, research and development expenses were \$2.44 billion or 23% of revenues, compared to \$2.28 billion or 20% of revenues for fiscal 2008. The dollar increase was primarily attributable to a \$129 million increase in costs related to the development of integrated circuit products, next generation CDMA and OFDMA technologies, the expansion of our intellectual property portfolio and other initiatives to support the acceleration of advanced wireless products and services, including lower cost devices, the integration of wireless with consumer electronics and computing, the convergence of multiband, multimode, multinet network products and technologies, third-party operating systems and services platforms. Research and development expenses in fiscal 2009 included share-based compensation and in-process research and development of \$280 million and \$6 million, respectively, compared to \$250 million and \$14 million, respectively, in fiscal 2008.

**Selling, General and Administrative Expenses.** For fiscal 2009, selling, general and administrative expenses were \$1.56 billion or 15% of revenues, compared to \$1.71 billion or 15% of revenues for fiscal 2008. The dollar decrease was primarily attributable to a \$110 million decrease in professional fees, of which \$72 million related to litigation and other legal matters, a \$24 million decrease in selling and marketing expenses and a \$19 million decrease in travel expenses. Selling, general and administrative expenses in fiscal 2009 included share-based compensation of \$263 million, compared to \$254 million in fiscal 2008.

**Other Operating Expenses.** Operating expenses for fiscal 2009 included a \$783 million charge in connection with the Settlement and Patent License and Non-Assert Agreement with Broadcom and a \$230 million fine levied by the KFTC.

**Net Investment (Loss) Income.** Net investment loss was \$150 million for fiscal 2009, compared to net investment income of \$96 million for fiscal 2008. The net decrease was primarily comprised as follows (in millions):

**Table of Contents**

	Year Ended		Change
	September 27, 2009	September 28, 2008	
Interest and dividend income:			
Corporate and other segments	\$ 513	\$ 487	\$ 26
QSI	3	4	(1)
Interest expense	(24)	(22)	(2)
Net realized gains on investments:			
Corporate and other segments	107	104	3
QSI	30	51	(21)
Net impairment losses on investments:			
Corporate and other segments	(734)	(502)	(232)
QSI	(29)	(33)	4
Gains on derivative instruments	1	6	(5)
Equity in (losses) earnings of investees	(17)	1	(18)
	\$ (150)	\$ 96	\$ (246)

Net impairment losses on marketable securities related primarily to depressed securities values caused by the prolonged disruption in global financial markets affecting consumers and the banking, finance and housing industries. This disruption was evidenced by a deterioration of confidence in financial markets and a severe decline in the availability of capital and demand for debt and equity securities.

**Income Tax Expense.** Income tax expense was \$484 million for fiscal 2009, compared to \$666 million for fiscal 2008. The annual effective tax rate was 23% for fiscal 2009, compared to 17% for fiscal 2008. The annual effective tax rate for fiscal 2009 was higher than the annual effective tax rate for fiscal 2008 primarily due to a decrease in foreign earnings taxed at less than the United States federal rate, an increase in the valuation allowance on capital losses recognized in earnings and the revaluation of net deferred tax assets to reflect changes in California law, partially offset by adjustments to prior year estimates of uncertain tax positions as a result of tax audits during fiscal 2009.

The annual effective tax rate for fiscal 2009 of 23% was less than the United States federal statutory rate primarily due to benefits of approximately 20% related to foreign earnings taxed at less than the United States federal rate, 7% related to adjustments to prior year estimates of uncertain tax positions as a result of tax audits during the year and 5% related to research and development tax credits, partially offset by an increase in valuation allowance related to capital losses of 11%, the revaluation of net deferred items of 4% and state taxes of approximately 5%.

**Our Segment Results for Fiscal 2010 Compared to Fiscal 2009**

The following should be read in conjunction with the fiscal 2010 and 2009 financial results for each reporting segment. See Notes to Consolidated Financial Statements Note 10 Segment Information.

**QCT Segment.** QCT revenues for fiscal 2010 were \$6.70 billion, compared to \$6.14 billion for fiscal 2009. Equipment and services revenues, mostly related to sales of MSM and accompanying RF and PM integrated circuits, were \$6.47 billion for fiscal 2010, compared to \$5.93 billion for fiscal 2009. The increase in equipment and services revenues resulted primarily from a \$1.25 billion increase related to higher unit shipments, partially offset by a decrease of \$713 million related to the net effects of changes in product mix and the average selling prices of such products. Approximately 399 million MSM integrated circuits were sold during fiscal 2010, compared to approximately 317 million for fiscal 2009. The chipset volume in fiscal 2009 was impacted by the slowdown in the worldwide economy that caused contraction in the CDMA-based channel inventory and resulted in lower demand for CDMA-based MSM integrated chips.

QCT earnings before taxes for fiscal 2010 were \$1.69 billion, compared to \$1.44 billion for fiscal 2009. QCT operating income as a percentage of revenues (operating margin percentage) was 25% in fiscal 2010, compared to 23% in fiscal 2009. The increase in QCT earnings before taxes was primarily attributable to the increase in revenues, partially offset by an increase in research and development expenses. The increase in QCT operating margin percentage was primarily due to an increase in gross margin percentage and a decrease in selling, general and administrative expenses as a percentage of revenues driven primarily by the increase in revenues. QCT gross

**Table of Contents**

margin percentage increased as a result of the net effects of a decrease in average unit costs, lower average selling prices and favorable product mix.

QCT inventory increased by 18% in fiscal 2010 from \$408 million to \$481 million primarily due to an increase in work-in-process associated with growth in sales volume and the net effects of changes in integrated circuit product mix.

**QTL Segment.** QTL revenues for fiscal 2010 were \$3.66 billion, compared to \$3.61 billion for fiscal 2009. Revenues in fiscal 2010 included \$71 million attributable to fiscal 2009 that had previously not been recognized due to discussions regarding a license agreement that was signed in the first quarter of fiscal 2010. QTL earnings before taxes for fiscal 2010 were \$3.02 billion, compared to \$3.07 billion for fiscal 2009. QTL operating margin percentage was 83% in the fiscal 2010, compared to 85% in fiscal 2009. The decrease in QTL earnings before taxes was primarily attributable to an increase in patent-related costs, partially offset by the increase in revenues, which resulted in a corresponding decrease in operating margin percentage.

**QWI Segment.** QWI revenues for fiscal 2010 were \$628 million, compared to \$641 million for fiscal 2009. Revenues decreased primarily due to a \$56 million decrease in QIS revenues, partially offset by a \$31 million increase in QES revenues. The decrease in QIS revenues was primarily attributable to a \$39 million decrease in QChat revenues resulting from decreased development efforts under the licensing agreement with Sprint and a \$16 million decrease in Brew revenues resulting from lower consumer demand. The increase in QES revenues was primarily attributable to a \$58 million increase in equipment revenue resulting from higher unit shipments, partially offset by a \$31 million decrease in messaging and other services revenue. QWI earnings before taxes for fiscal 2010 were \$12 million, compared to \$20 million for fiscal 2009. QWI operating margin percentage was 1% in fiscal 2010, compared to 3% in fiscal 2009. The decrease in QWI earnings before taxes was primarily attributable to the decrease in revenues, partially offset by a decrease in research and development expenses. The decrease in QWI operating margin percentage was primarily attributable to a decrease in QIS gross margin percentage, partially offset by the decrease in research and development expenses.

**QSI Segment.** QSI revenues for fiscal 2010 were \$9 million, compared to \$29 million for fiscal 2009. Revenues were attributable to our FLO TV subsidiary. The decrease in FLO TV revenues was primarily due to an increase in customer-related incentives that were recorded as reductions in revenues and lower service-related revenues. QSI loss before taxes for fiscal 2010 was \$436 million, compared to \$361 million for fiscal 2009. QSI loss before taxes increased by \$75 million primarily due to a \$135 million increase in our FLO TV subsidiary's loss before taxes, partially offset by a \$62 million gain on the sale of our Australia spectrum license.

We have commenced a restructuring plan under which we expect to exit the current FLO TV service business. There were no significant expenses recognized in fiscal 2010 related to this restructuring plan. In addition to our ongoing operating costs, we expect to incur restructuring charges related to this plan in the range of \$125 million to \$175 million in fiscal 2011, which are primarily related to certain contractual obligations. Additional charges, including impairment of assets, may be incurred as we continue to evaluate or implement strategic options or if we are unable to generate adequate future cash flows associated with this business.

**Our Segment Results for Fiscal 2009 Compared to Fiscal 2008**

The following should be read in conjunction with the fiscal 2009 and 2008 financial results for each reporting segment. See Notes to Consolidated Financial Statements Note 10 Segment Information.

**QCT Segment.** QCT revenues for fiscal 2009 were \$6.14 billion, compared to \$6.72 billion for fiscal 2008. Equipment and services revenues, mostly related to sales of MSM and accompanying RF and PM integrated circuits, were \$5.93 billion for fiscal 2009, compared to \$6.53 billion for fiscal 2008. The decrease in equipment and services revenues resulted primarily from a \$770 million decrease related to lower unit shipments, caused by the contraction in CDMA-based channel inventory. This decrease was partially offset by an increase of \$113 million related to the net effects of changes in product mix and the average selling prices of such products. Approximately 317 million MSM integrated circuits were sold during fiscal 2009, compared to approximately 336 million for fiscal 2008.

QCT earnings before taxes for fiscal 2009 were \$1.44 billion, compared to \$1.83 billion for fiscal 2008. QCT operating income as a percentage of revenues (operating margin percentage) was 23% in fiscal 2009, compared to 27% in fiscal 2008. The decrease in operating margin percentage was primarily due to increased research and

development expenses while revenues declined.

QCT inventories decreased by 10% in fiscal 2009 from \$453 million to \$408 million primarily due to the net effects of changes in integrated circuit product mix and a decrease in average unit costs.

**Table of Contents**

**QTL Segment.** QTL revenues for fiscal 2009 were \$3.61 billion, compared to \$3.62 billion for fiscal 2008. QTL earnings before taxes for fiscal 2009 were \$3.07 billion, compared to \$3.14 billion for fiscal 2008. QTL operating margin percentage was 85% in fiscal 2009, compared to 87% in fiscal 2008. The decrease in earnings before taxes was primarily attributable to an increase in amortization related to acquired patents, partially offset by a decrease in professional fees related to litigation and other legal matters, which resulted in a corresponding decline in operating margin percentage.

**QWI Segment.** QWI revenues for fiscal 2009 were \$641 million, compared to \$785 million for fiscal 2008. Revenues decreased primarily due to a \$79 million decrease in QES revenues and a \$71 million decrease in QIS revenues. The decrease in QES revenues was primarily attributable to a \$50 million decrease in revenues from hardware product sales, due to a 47,500-unit reduction, or 52%, in the number of units shipped, and a \$21 million decrease in messaging revenue. The decrease in QIS revenues was primarily attributable to a \$45 million decrease in QChat revenues resulting primarily from decreased development efforts under the licensing agreement with Sprint and a \$30 million decrease in Brew revenues resulting from lower consumer demand and lower prices due to the slowdown in global economies and competitive pricing pressures.

QWI earnings before taxes for fiscal 2009 were \$20 million, compared to a loss before taxes of \$1 million for fiscal 2008. QWI operating margin percentage was 3% in fiscal 2009, compared to zero percent in fiscal 2008. The increase in QWI earnings before taxes was primarily attributable to a decrease in selling, general and administrative expenses and research and development expenses of QIS and QES, partially offset by an increase in the operating loss of Firethorn. The increase in QWI operating margin percentage was primarily attributable to improvements in QIS and QES gross margin percentage, partially offset by an increase in the operating loss of Firethorn.

**QSI Segment.** QSI revenues for fiscal 2009 were \$29 million, compared to \$12 million for fiscal 2008. QSI loss before taxes for fiscal 2009 was \$361 million, compared to \$304 million for fiscal 2008. QSI revenues were attributable to our FLO TV subsidiary. QSI loss before taxes increased by \$57 million primarily due to a \$39 million increase in net investment losses (unrelated to FLO TV) and an \$18 million increase in our FLO TV subsidiary's loss before taxes.

**Liquidity and Capital Resources**

Our principal sources of liquidity are our existing cash, cash equivalents and marketable securities, cash generated from operations and proceeds from the issuance of common stock under our stock option and employee stock purchase plans. Cash, cash equivalents and marketable securities were \$18.4 billion at September 26, 2010, an increase of \$660 million from September 27, 2009. Our cash, cash equivalents and marketable securities at September 26, 2010 consisted of \$6.3 billion held domestically and \$12.1 billion held by foreign subsidiaries. Due to tax and accounting considerations, we derive liquidity for operations primarily from domestic cash flow and investments held domestically. Total cash provided by operating activities decreased to \$4.1 billion during fiscal 2010, compared to \$7.2 billion during fiscal 2009. The decrease was primarily due to collection of the \$2.5 billion trade receivable in fiscal 2009 related to the license and settlement agreements completed with Nokia in September 2008.

During fiscal 2010, we repurchased and retired 79,789,000 shares of our common stock for \$3.0 billion. On March 1, 2010, we announced that we had been authorized to repurchase up to \$3.0 billion of our common stock, and \$1.7 billion of that amount remained available at September 26, 2010. The stock repurchase program has no expiration date. We intend to continue to repurchase shares of our common stock under this program as a means of returning capital to stockholders, subject to capital availability and periodic determinations that stock repurchases are in the best interests of our stockholders.

We declared and paid dividends totaling \$1.2 billion, \$1.1 billion and \$982 million, or \$0.72, \$0.66 and \$0.60 per common share, during fiscal 2010, 2009 and 2008. On March 1, 2010, we announced an increase in our quarterly cash dividend per share of common stock from \$0.17 to \$0.19. We announced cash dividends totaling \$305 million, or \$0.19 per share, during the fourth quarter of fiscal 2010, which were paid on September 24, 2010. On October 13, 2010, we announced a cash dividend of \$0.19 per share on our common stock, payable on December 22, 2010 to stockholders of record as of November 24, 2010. We intend to continue to use cash dividends as a means of returning capital to stockholders, subject to capital availability and periodic determinations that cash dividends are in the best

interests of our stockholders.

Accounts receivable increased 4% during fiscal 2010. Days sales outstanding, on a consolidated basis, were 22 days at September 26, 2010 compared to 23 days at September 27, 2009.

**Table of Contents**

We believe our current cash and cash equivalents, marketable securities and our expected cash flow generated from operations will provide us with flexibility and satisfy our working and other capital requirements over the next fiscal year and beyond based on our current business plans. The following working and other capital requirements are anticipated in fiscal 2011:

Our total research and development expenditures were \$2.5 billion and \$2.4 billion in fiscal 2010 and 2009, respectively, and we expect to continue to invest heavily in research and development for new technologies, applications and services for the wireless industry.

Capital expenditures were \$426 million and \$761 million in fiscal 2010 and 2009, respectively, and advance payment on spectrum was \$1.1 billion in fiscal 2010. We anticipate that capital expenditures excluding the fiscal 2010 advance payment on spectrum will be more than three times higher in fiscal 2011 as compared to fiscal 2010 primarily due to the construction of a new manufacturing facility in fiscal 2011 for our QMT division. Future capital expenditures may also be impacted by transactions that are currently not forecasted.

Our purchase obligations for fiscal 2011, some of which relate to research and development activities and capital expenditures, totaled \$1.4 billion at September 26, 2010.

In the first quarter of fiscal 2011, we expect to pay \$1.4 billion to the United States tax authorities as a result of the cash and intangible assets received in connection with the 2008 license and settlement agreements with Nokia. We intend to use cash held domestically to settle this obligation.

In the first quarter of fiscal 2011, we are obligated to repay a \$1.1 billion short-term bank loan that is denominated in Indian rupees. The loan has a fixed interest rate of 6.75% per year with interest payments due monthly. The loan is related to the BWA spectrum recently won in the India auction. We expect to refinance a substantial portion of this short-term bank loan with a long-term bank loan in the first half of fiscal 2011.

Pursuant to the Settlement and Patent License and Non-Assert Agreement with Broadcom, we are obligated to pay a remaining \$475 million ratably through April 2013, including imputed interest, of which \$173 million is payable in fiscal 2011.

In fiscal 2011, we anticipate incurring cash expenditures associated with the expected exit of the current FLO TV service business in the range of \$160 million to \$210 million, primarily related to certain contractual obligations, in addition to FLO TV's ongoing cash expenditures. Additional cash expenditures may be incurred as we continue to evaluate or implement strategic options or if we are unable to generate adequate future cash flows associated with this business.

Cash used for strategic investments and acquisitions, net of cash acquired, was \$94 million and \$54 million in fiscal 2010 and 2009, respectively, and we expect to continue making strategic investments and acquisitions to open new markets for our technology, expand our technology, obtain development resources, grow our patent portfolio or pursue new business opportunities.

**Contractual Obligations / Off-Balance Sheet Arrangements**

We have no significant contractual obligations not fully recorded on our consolidated balance sheets or fully disclosed in the notes to our consolidated financial statements. We have no material off-balance sheet arrangements as defined in S-K 303(a)(4)(ii).

At September 26, 2010, our outstanding contractual obligations included (in millions):

**Table of Contents**

**Contractual Obligations  
Payments Due By Fiscal Period**

	<b>Total</b>	<b>2011</b>	<b>2012-2013</b>	<b>2014-2015</b>	<b>Beyond 2015</b>	<b>No Expiration Date</b>
Purchase obligations <sup>(1)</sup>	\$ 1,729	\$ 1,401	\$ 222	\$ 67	\$ 39	\$
Operating lease obligations	471	95	100	48	228	
Equity funding commitments <sup>(2)</sup>	30					30
<b>Total commitments</b>	<b>2,230</b>	<b>1,496</b>	<b>322</b>	<b>115</b>	<b>267</b>	<b>30</b>
Loan payable to banks	1,086	1,086				
Capital lease obligations <sup>(3)</sup>	521	17	32	34	438	
Other long-term liabilities <sup>(4)(5)</sup>	305		293		12	
<b>Total recorded liabilities</b>	<b>1,912</b>	<b>1,103</b>	<b>325</b>	<b>34</b>	<b>450</b>	
<b>Total</b>	<b>\$ 4,142</b>	<b>\$ 2,599</b>	<b>\$ 647</b>	<b>\$ 149</b>	<b>\$ 717</b>	<b>\$ 30</b>

(1) Total purchase obligations include \$1.2 billion in commitments to purchase integrated circuit product inventories.

(2) These commitments do not have fixed funding dates and are subject to certain conditions. Commitments represent the maximum amounts to be financed or funded under these

arrangements;  
actual financing  
or funding may  
be in lesser  
amounts or not  
at all.

(3) Amounts  
represent future  
minimum lease  
payments  
including  
interest  
payments.  
Capital lease  
obligations are  
included in  
other liabilities  
in the  
consolidated  
balance sheet at  
September 26,  
2010.

(4) Certain  
long-term  
liabilities  
reflected on our  
balance sheet,  
such as  
unearned  
revenues, are  
not presented in  
this table  
because they do  
not require cash  
settlement in the  
future. Other  
long-term  
liabilities as  
presented in this  
table include the  
related current  
portions.

(5) Our  
consolidated  
balance sheet at  
September 26,  
2010 included a  
\$6 million

noncurrent liability for uncertain tax positions, all of which may result in cash payment. The future payments related to uncertain tax positions have not been presented in the table above due to the uncertainty of the amounts and timing of cash settlement with the taxing authorities.

Additional information regarding our financial commitments at September 26, 2010 is provided in the notes to our consolidated financial statements. See Notes to Consolidated Financial Statements, Note 9 Commitments and Contingencies.

**Item 7A. Quantitative and Qualitative Disclosures about Market Risk**

**Interest Rate Risk.** We invest our cash in a number of diversified investment- and non-investment-grade fixed and floating rate securities, consisting of cash equivalents, marketable debt securities and debt mutual funds. Changes in the general level of United States interest rates can affect the principal values and yields of fixed interest-bearing securities. If interest rates in the general economy were to rise rapidly in a short period of time, our fixed interest-bearing securities could lose value. When the general economy weakens significantly, the credit profile, financial strength and growth prospects of certain issuers of interest-bearing securities held in our investment portfolios may deteriorate, and our interest-bearing securities may lose value either temporarily or other than temporarily. We may implement investment strategies of different types with varying duration and risk/return trade-offs that do not perform well.

The following table provides information about our interest-bearing cash and cash equivalents, marketable securities and loan payable to banks that are sensitive to changes in interest rates. The table presents principal cash flows, weighted-average yield at cost and contractual maturity dates. Additionally, we have assumed that the interest-bearing securities are similar enough within the specified categories to aggregate the securities for presentation purposes.

**Table of Contents**

**Principal Amount by Expected Maturity  
Average Interest Rates  
(Dollars in millions)**

	2011	2012	2013	2014	2015	Thereafter	No Single Maturity	Total
Fixed interest-bearing securities:								
Cash and cash equivalents	\$ 698	\$	\$	\$	\$	\$	\$	\$ 698
Interest rate	0.3%							
Time deposits	\$ 400	\$	\$	\$	\$	\$	\$	\$ 400
Interest rate	0.6%							
Available-for-sale securities:								
Investment grade	\$ 1,299	\$ 672	\$ 695	\$ 558	\$ 162	\$ 229	\$ 1,818	\$ 5,433
Interest rate	2.2%	3.3%	2.7%	3.9%	3.7%	7.9%	1.3%	
Non-investment grade	\$ 11	\$ 25	\$ 45	\$ 107	\$ 234	\$ 836	\$ 20	\$ 1,278
Interest rate	12.6%	8.7%	9.7%	9.6%	10.3%	8.7%	0.7%	
Floating interest-bearing securities:								
Cash and cash equivalents	\$ 2,488	\$	\$	\$	\$	\$	\$	\$ 2,488
Interest rate	0.2%							
Available-for-sale securities:								
Investment grade	\$ 785	\$ 499	\$ 225	\$ 35	\$ 29	\$ 465	\$ 451	\$ 2,489
Interest rate	1.0%	0.8%	0.9%	1.7%	1.0%	8.7%	2.8%	
Non-investment grade	\$ 5	\$ 39	\$ 137	\$ 317	\$ 146	\$ 372	\$ 1,071	\$ 2,087
Interest rate	7.6%	5.7%	6.5%	6.6%	6.4%	7.0%	4.1%	
Loan payable to banks	\$ 1,086	\$	\$	\$	\$	\$	\$	\$ 1,086
Fixed interest rate	6.8%							

Cash and cash equivalents and available-for-sale securities are recorded at fair value. The loan payable to banks approximates fair value.

**Equity Price Risk.** We have a diversified marketable securities portfolio that includes equity securities held by mutual and exchange-traded fund shares that are subject to equity price risk. We have made investments in marketable equity securities of companies of varying size, style, industry and geography, and changes in investment allocations may affect the price volatility of our investments. A 10% decrease in the market price of our marketable equity securities and equity mutual fund and exchange-traded fund shares at September 26, 2010 would cause a decrease in the carrying amounts of these securities of \$270 million. At September 26, 2010, gross unrealized losses of our marketable equity securities and equity mutual and exchange-traded fund shares were \$11 million. Although we

consider these unrealized losses to be temporary, there is a risk that we may incur net other-than-temporary impairment charges or realized losses on the values of these securities if they do not recover in value within a reasonable period.

**Foreign Exchange Risk.** We manage our exposure to foreign exchange market risks, when deemed appropriate, through the use of derivative financial instruments, including foreign currency forward and option contracts with financial counterparties. Such derivative financial instruments are viewed as hedging or risk management tools and are not used for speculative or trading purposes. Counterparties to our derivative contracts are all major institutions. In the event of the financial insolvency or distress of a counterparty to our derivative financial instruments, we may be unable to settle transactions if the counterparty does not provide us with sufficient collateral to secure its net settlement obligations to us, which could have a negative impact on our results. At September 26, 2010, we had a net liability of \$13 million related to foreign currency option contracts that were designated as hedges of foreign currency risk on royalties earned from certain international licensees on their sales of CDMA-based devices and a net liability of \$2 million related to foreign currency option contracts that have been rendered ineffective as a result of changes in our forecast of royalty revenues. If our forecasted royalty revenues were to decline by 50% and foreign exchange rates were to change unfavorably by 20% in each of our hedged foreign currencies, we would incur a loss of approximately \$16 million resulting from a decrease in the fair value of the portion of our hedges that would be rendered ineffective. In addition, we are subject to market risk on foreign currency option contracts that have been deemed ineffective. If foreign exchange rates relevant to those contracts were to change unfavorably by 20%, we would incur a loss of \$20 million resulting from a decrease in the fair value of our hedges. See Notes to Consolidated Financial Statements, Note 1 The Company and Its Significant Accounting Policies for a description of our foreign currency accounting policies.

**Table of Contents**

At September 26, 2010, we had a fixed-rate short-term bank loan of \$1.1 billion, which is payable in full in Indian rupees in December 2010. The loan is payable in the functional currency of our consolidated subsidiary that is party to the loan, however we are subject to foreign currency translation risk, which may impact the amount of our liability for principal repayment and interest expense we record in the future. If the foreign currency exchange rate were to change unfavorably by 20%, additional interest expense would be negligible due to the short-term nature of the loan. At September 26, 2010, we had an asset of \$7 million related to foreign currency forward contracts that were not designated as hedges of certain payments to be made in Indian rupees in connection with the bank loan. We are subject to market risk on such contracts. If the foreign exchange rates relevant to those contracts were to change unfavorably by 20%, we would incur a loss of \$57 million.

Financial instruments held by consolidated subsidiaries that are not denominated in the functional currency of those entities are subject to the effects of currency fluctuations and may affect reported earnings. As a global concern, we face exposure to adverse movements in foreign currency exchange rates. We may hedge currency exposures associated with certain assets and liabilities denominated in nonfunctional currencies and certain anticipated nonfunctional currency transactions. As a result, we could experience unanticipated gains or losses on anticipated foreign currency cash flows, as well as economic loss with respect to the recoverability of investments. While we may hedge certain transactions with non-United States customers, declines in currency values in certain regions may, if not reversed, adversely affect future product sales because our products may become more expensive to purchase in the countries of the affected currencies.

Our analysis methods used to assess and mitigate the risks discussed above should not be considered projections of future risks.

**Item 8. Financial Statements and Supplementary Data**

Our consolidated financial statements at September 26, 2010 and September 27, 2009 and the Report of PricewaterhouseCoopers LLP, Independent Registered Public Accounting Firm, are included in this Annual Report on Form 10-K on pages F-1 through F-32.

**Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure**

None.

**Item 9A. Controls and Procedures****Conclusion Regarding the Effectiveness of Disclosure Controls and Procedures**

Under the supervision and with the participation of our management, including our principal executive officer and principal financial officer, we conducted an evaluation of our disclosure controls and procedures, as such terms are defined under Rule 13a-15(e) promulgated under the Securities Exchange Act of 1934, as amended (the Exchange Act). Based on this evaluation, our principal executive officer and our principal financial officer concluded that our disclosure controls and procedures were effective as of the end of the period covered by this Annual Report.

**Management's Report on Internal Control Over Financial Reporting**

Our management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Exchange Act Rule 13a-15(f). Under the supervision and with the participation of our management, including our principal executive officer and principal financial officer, we conducted an evaluation of the effectiveness of our internal control over financial reporting based on the framework in *Internal Control Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on our evaluation under the framework in *Internal Control Integrated Framework*, our management concluded that our internal control over financial reporting was effective as of September 26, 2010.

PricewaterhouseCoopers LLP, the independent registered public accounting firm that audited the consolidated financial statements included in this Annual Report on Form 10-K, has also audited the effectiveness of our internal control over financial reporting as of September 26, 2010, as stated in its report which appears on page F-1.

**Inherent Limitations Over Internal Controls**

Our internal control over financial reporting is designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of consolidated financial statements for external purposes in accordance with generally accepted accounting principles. Our internal control over financial reporting includes those policies and procedures that:

- i. pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of our assets;

**Table of Contents**

- ii. provide reasonable assurance that transactions are recorded as necessary to permit preparation of consolidated financial statements in accordance with generally accepted accounting principles, and that our receipts and expenditures are being made only in accordance with authorizations of our management and directors; and
- iii. provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of our assets that could have a material effect on the consolidated financial statements.

Internal control over financial reporting cannot provide absolute assurance of achieving financial reporting objectives because of its inherent limitations, including the possibility of human error and circumvention by collusion or overriding of controls. Accordingly, even an effective internal control system may not prevent or detect material misstatements on a timely basis. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions or that the degree of compliance with the policies or procedures may deteriorate.

**Changes in Internal Control Over Financial Reporting**

There were no changes in our internal control over financial reporting during fiscal 2010 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

**Item 9B. Other Information**

None.

**Table of Contents**

**PART III**

**Item 10. Directors, Executive Officers and Corporate Governance**

The information required by this item regarding directors is incorporated by reference to our Definitive Proxy Statement to be filed with the Securities and Exchange Commission in connection with the Annual Meeting of Stockholders to be held in 2011 (the 2011 Proxy Statement ) under the heading Election of Directors. Information regarding executive officers is set forth in Item 1 of Part I of this Report under the caption Executive Officers. The information regarding our code of ethics is incorporated by reference to the 2011 Proxy Statement under the heading Code of Ethics.

**Item 11. Executive Compensation**

The information required by this item is incorporated by reference to the 2011 Proxy Statement under the heading Executive Compensation and Related Information.

**Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters**

The information required by this item is incorporated by reference to the 2011 Proxy Statement under the headings Equity Compensation Plan Information and Stock Ownership of Certain Beneficial Owners and Management.

**Report of Independent Registered Public Accounting Firm**

To the Board of Directors and Stockholders of QUALCOMM Incorporated:

In our opinion, the accompanying consolidated financial statements listed in the index appearing under Item 15(a)(1) present fairly, in all material respects, the financial position of QUALCOMM Incorporated and its subsidiaries at September 26, 2010 and September 27, 2009 and the results of their operations and their cash flows for each of the three years in the period ended September 26, 2010 in conformity with accounting principles generally accepted in the United States of America. In addition, in our opinion, the financial statement schedule listed in the index appearing under Item 15(a)(2) presents fairly, in all material respects, the information set forth therein when read in conjunction with the related consolidated financial statements. Also in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of September 26, 2010, based on criteria established in *Internal Control - Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Company's management is responsible for these financial statements and financial statement schedule, for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Report on Internal Control Over Financial Reporting appearing under Item 9A. Our responsibility is to express opinions on these financial statements, on the financial statement schedule and on the Company's internal control over financial reporting based on our integrated audits. We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

**Table of Contents****QUALCOMM Incorporated****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS****Note 1. The Company and Its Significant Accounting Policies**

**The Company.** QUALCOMM Incorporated, a Delaware corporation, and its subsidiaries (collectively the Company or QUALCOMM), develop, design, manufacture and market digital wireless telecommunications products and services. The Company is a leading developer and supplier of Code Division Multiple Access (CDMA)-based integrated circuits and system software for wireless voice and data communications, multimedia functions and global positioning system products to wireless device and infrastructure manufacturers. The Company also manufactures and sells products based upon Orthogonal Frequency Division Multiplexing Access (OFDMA) technology. The Company grants licenses to use portions of its intellectual property portfolio, which includes certain patent rights essential to and/or useful in the manufacture and sale of certain wireless products, and receives license fees as well as ongoing royalties based on sales by licensees of wireless telecommunications equipment products incorporating its patented technologies. The Company sells equipment, software and services to transportation and other companies to wirelessly connect their assets and workforce. The Company provides software products and services for content enablement across a wide variety of platforms and devices for the wireless industry. The Company provides services to wireless operators to deliver multimedia content, including live television, in the United States. The Company also makes strategic investments to support the global adoption of CDMA- and OFDMA-based technologies and services.

**Principles of Consolidation.** The Company's consolidated financial statements include the assets, liabilities and operating results of majority-owned subsidiaries. In addition, the Company consolidates its investments in two less than majority-owned variable interest entities as the Company is the primary beneficiary. The ownership of the other interest holders of consolidated subsidiaries and variable interest entities is not presented separately in the consolidated balance sheets or statements of operations as these amounts are negligible for the fiscal years presented. The Company does not hold significant variable interests in any variable interest entities. All significant intercompany accounts and transactions have been eliminated. Certain of the Company's consolidated subsidiaries are included in the consolidated financial statements one month in arrears to facilitate the timely inclusion of such entities in the Company's consolidated financial statements.

**Financial Statement Preparation.** The preparation of financial statements in conformity with accounting principles generally accepted in the United States requires management to make estimates and assumptions that affect the reported amounts and the disclosure of contingent amounts in the Company's consolidated financial statements and the accompanying notes. Actual results could differ from those estimates. Certain prior year amounts have been reclassified to conform to the current year presentation.

**Fiscal Year.** The Company operates and reports using a 52-53 week fiscal year ending on the last Sunday in September. The fiscal years ended September 26, 2010, September 27, 2009 and September 28, 2008 included 52 weeks.

**Revenue Recognition.** The Company derives revenues principally from sales of integrated circuit products, royalties and license fees for its intellectual property, messaging and other services and related hardware sales, software development and licensing and related services, software hosting services and services related to delivery of multimedia content. The timing of revenue recognition and the amount of revenue actually recognized in each case depends upon a variety of factors, including the specific terms of each arrangement and the nature of the Company's deliverables and obligations.

For transactions entered into prior to the first quarter of fiscal 2010, the Company allocated revenue for transactions that included multiple elements to each unit of accounting based on its relative fair value using vendor-specific objective evidence (VSOE). The price charged when the element was sold separately generally determined fair value. When the Company had objective evidence of the fair values of undelivered elements but not delivered elements, the Company allocated revenue first to the fair value of the undelivered elements, and the residual revenue was then allocated to the delivered elements. If the fair value of any undelivered element included in a multiple element arrangement could not be objectively determined, revenue was deferred until all elements were delivered or services were performed, or until fair value could be objectively determined for any remaining undelivered elements. Beginning in the first quarter of fiscal 2010, the Company elected to early adopt the Financial

Accounting Standards Board's (FASB) amended accounting guidance for revenue recognition that eliminates the use of the residual method and requires entities to allocate revenue using the relative selling price method. For substantially all of the arrangements with multiple deliverables, the Company continues to use VSOE to allocate the selling price to each deliverable. The Company determines VSOE based on its normal pricing and discounting practices for the specific product or service when sold separately. As a result of the amended guidance, in certain limited instances when VSOE cannot be established, the Company first attempts to establish the selling price based on third-party

F-6

---

**Table of Contents****QUALCOMM Incorporated****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**

evidence (TPE). If TPE is not available, the Company estimates the selling price of the product or service as if it were sold on a standalone basis. The adoption of the new guidance did not have a material impact on the timing or pattern of revenue recognition.

Revenues from sales of the Company's products are recognized at the time of shipment, or when title and risk of loss pass to the customer and other criteria for revenue recognition are met, if later. Revenues from providing services, including software hosting services and the delivery of multimedia content, are recognized when earned.

The Company licenses or otherwise provides rights to use portions of its intellectual property portfolio, which includes certain patent rights essential to and/or useful in the manufacture and sale of certain wireless products. Licensees typically pay a license fee in one or more installments and ongoing royalties based on their sales of products incorporating or using the Company's licensed intellectual property. License fees are recognized over the estimated period of benefit to the licensee, typically five to fifteen years. The Company earns royalties on such licensed products sold worldwide by its licensees at the time that the licensees' sales occur. The Company's licensees, however, do not report and pay royalties owed for sales in any given quarter until after the conclusion of that quarter. The Company recognizes royalty revenues based on royalties reported by licensees during the quarter and when other revenue recognition criteria are met.

Revenues from long-term contracts are recognized using the percentage-of-completion method of accounting, based on costs incurred compared with total estimated costs. The percentage-of-completion method relies on estimates of total contract revenue and costs. Revenues and profits are subject to revisions as the contract progresses to completion. Revisions in profit estimates are charged or credited to income in the period in which the facts that give rise to the revision become known. If actual contract costs are greater than expected, reduction of contract profit would be required. Estimated contract losses are recognized when determined.

The Company provides both perpetual and renewable time-based software licenses. Revenues from software license fees are recognized when revenue recognition criteria are met and, if applicable, when vendor-specific objective evidence exists to allocate the total license fee to elements of multiple-element software arrangements, including post-contract customer support. Post-contract support is recognized ratably over the term of the related contract. When contracts contain multiple elements wherein the only undelivered element is post-contract customer support and vendor-specific objective evidence of the fair value of post-contract customer support does not exist, revenue from the entire arrangement is recognized ratably over the support period. The amount or timing of the Company's software license revenue may differ as a result of changes in these judgments or estimates.

The Company records reductions to revenue for customer incentive programs, including special pricing agreements and other volume-related rebate programs. Certain reductions to revenues for customer incentives are based on a number of factors, including the contractual provisions of the customer agreements and the Company's assumptions related to historical and projected customer sales volumes, market share and inventory levels.

Unearned revenues consist primarily of license fees for intellectual property and software products, hardware product sales with continuing performance obligations and billings on uncompleted contracts in excess of incurred cost and accrued profit.

**Concentrations.** A significant portion of the Company's revenues is concentrated with a limited number of customers. Revenues from two customers of the Company's QCT and QTL segments each comprised an aggregate of 15% and 10% of total consolidated revenues in fiscal 2010, compared to 18% and 13% of total consolidated revenues in fiscal 2009 and 16% and 14% of total consolidated revenues in fiscal 2008, respectively. Aggregated accounts receivable from three customers comprised 42% of gross accounts receivable at September 26, 2010. Aggregated accounts receivable from three customers comprised 48% of gross accounts receivable at September 27, 2009.

Revenues from international customers were approximately 95%, 94% and 91% of total consolidated revenues in fiscal 2010, 2009 and 2008, respectively.

**Cost of Equipment and Services Revenues.** Cost of equipment and services revenues is primarily comprised of the cost of equipment revenues, the cost of messaging and multimedia content delivery services revenues and the cost of development and other services revenues. Cost of equipment revenues consists of the cost of equipment sold, the

amortization of certain intangible assets, including license fees and patents, and sustaining engineering costs, including personnel and related costs. Cost of messaging and multimedia content delivery services revenues consists principally of satellite transponder costs, network operations expenses, including personnel and related costs, depreciation, content costs and airtime charges by telecommunications operators. Cost of development and other services revenues primarily includes personnel costs and related expenses.

F-7

---

Table of Contents

**QUALCOMM Incorporated**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**

**Shipping and Handling Costs.** Costs incurred for shipping and handling are included in cost of equipment and services revenues at the time the related revenue is recognized. Amounts billed to a customer for shipping and handling are reported as revenue.

**Research and Development.** Costs incurred in research and development activities are expensed as incurred, except certain software development costs capitalized after technological feasibility of the software is established.

**Marketing.** Cooperative marketing programs reimburse customers for marketing activities for certain of the Company's products and services, subject to defined criteria. Cooperative marketing costs are recorded as selling, general and administrative expenses to the extent that a marketing benefit separate from the revenue transaction can be identified and supported by objective evidence and the cash paid does not exceed the fair value of that marketing benefit received. Any excess of cash paid over the fair value of the marketing benefit received is recorded as a reduction in revenues in the same period the related revenue is recorded. Cooperative marketing expense is recorded as incurred.

**Income Taxes.** The asset and liability approach is used to recognize deferred tax assets and liabilities for the expected future tax consequences of temporary differences between the carrying amounts and the tax bases of assets and liabilities. Tax law and rate changes are reflected in income in the period such changes are enacted. The Company records a valuation allowance to reduce the deferred tax assets to the amount that is more likely than not to be realized. The Company includes interest and penalties related to income taxes, including unrecognized tax benefits, within the provision for income taxes.

The Company's income tax returns are based on calculations and assumptions that are subject to examination by the Internal Revenue Service and other tax authorities. In addition, the calculation of our tax liabilities involves dealing with uncertainties in the application of complex tax regulations. We recognize liabilities for uncertain tax positions based on a two-step process. The first step is to evaluate the tax position for recognition by determining if the weight of available evidence indicates that it is more likely than not that the position will be sustained on audit, including resolution of related appeals or litigation processes, if any. The second step is to measure the tax benefit as the largest amount that is more than 50% likely of being realized upon settlement. While the Company believes it has appropriate support for the positions taken on its tax returns, the Company regularly assesses the potential outcomes of examinations by tax authorities in determining the adequacy of its provision for income taxes. The Company continually assesses the likelihood and amount of potential adjustments and adjusts the income tax provision, income taxes payable and deferred taxes in the period in which the facts that give rise to a revision become known.

The Company recognizes windfall tax benefits associated with the exercise of stock options directly to stockholders' equity only when realized. A windfall tax benefit occurs when the actual tax benefit realized by the Company upon an employee's disposition of a share-based award exceeds the deferred tax asset, if any, associated with the award that the Company had recorded. When assessing whether a tax benefit relating to share-based compensation has been realized, the Company follows the tax law ordering method, under which current year share-based compensation deductions are assumed to be utilized before net operating loss carryforwards and other tax attributes.

**Cash Equivalents.** The Company considers all highly liquid investments with original maturities of three months or less to be cash equivalents. Cash equivalents are comprised of money market funds, certificates of deposit, commercial paper and government agencies' securities. The carrying amounts approximate fair value due to the short maturities of these instruments.

**Marketable Securities.** The appropriate classification of marketable securities is determined at the time of purchase and reevaluated as of each balance sheet date. Marketable securities include available-for-sale securities, securities for which the Company has elected the fair value option and certain time deposits. The Company classifies marketable securities as current or noncurrent based on the nature of the securities and their availability for use in current operations. Actively traded marketable securities are stated at fair value as determined by the security's most recently traded price at the balance sheet date. If securities are not actively traded, fair value is determined using other valuation techniques, such as matrix pricing. The net unrealized gains or losses on available-for-sale securities are reported as a component of accumulated other comprehensive income (loss), net of income tax. The unrealized gains

or losses on securities for which the Company has elected the fair value option are recognized in net investment income (loss). The realized gains and losses on marketable securities are determined using the specific identification method.

F-8

---

**Table of Contents****QUALCOMM Incorporated****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**

At each balance sheet date, the Company assesses available-for-sale securities in an unrealized loss position to determine whether the unrealized loss is other than temporary. The Company considers factors including: the significance of the decline in value compared to the cost basis, underlying factors contributing to a decline in the prices of securities in a single asset class, how long the market value of the security has been less than its cost basis, the security's relative performance versus its peers, sector or asset class, expected market volatility and the market and economy in general, analyst recommendations and price targets, views of external investment managers, news or financial information that has been released specific to the investee and the outlook for the overall industry in which the investee operates.

In April 2009, the FASB amended the existing guidance on determining whether an impairment for an investment in debt securities is other than temporary. Effective in the third quarter of fiscal 2009, if the debt security's market value is below amortized cost and the Company either intends to sell the security or it is more likely than not that the Company will be required to sell the security before its anticipated recovery, the Company records an other-than-temporary impairment charge to investment income (loss) for the entire amount of the impairment. For the remaining debt securities, if an other-than-temporary impairment exists, the Company separates the other-than-temporary impairment into the portion of the loss related to credit factors, or the credit loss portion, and the portion of the loss that is not related to credit factors, or the noncredit loss portion. The credit loss portion is the difference between the amortized cost of the security and the Company's best estimate of the present value of the cash flows expected to be collected from the debt security. The noncredit loss portion is the residual amount of the other-than-temporary impairment. The credit loss portion is recorded as a charge to investment income (loss), and the noncredit loss portion is recorded as a separate component of other comprehensive income (loss). Prior to the third quarter of fiscal 2009, the entire other-than-temporary impairment loss was recognized in earnings for all debt securities.

When calculating the present value of expected cash flows to determine the credit loss portion of the other-than-temporary impairment, the Company estimates the amount and timing of projected cash flows, the probability of default and the timing and amount of recoveries on a security-by-security basis. These calculations use inputs primarily based on observable market data, such as credit default swap spreads, historical default and recovery statistics, rating agency data, credit ratings and other data relevant to analyzing the collectibility of the security. The amortized cost basis of a debt security is adjusted for any credit loss portion of the impairment recorded to earnings. The difference between the new cost basis and cash flows expected to be collected is accreted to investment income (loss) over the remaining expected life of the security.

Securities that are accounted for as equity securities include investments in common stock, equity mutual and exchange-traded funds and debt mutual funds. For equity securities, the Company considers the loss relative to the expected volatility and the likelihood of recovery over a reasonable period of time. If events and circumstances indicate that a decline in the value of an equity security has occurred and is other than temporary, the Company records a charge to investment income (loss) for the difference between fair value and cost at the balance sheet date. Additionally, if the Company has either the intent to sell the security or does not have both the intent and the ability to hold the equity security until its anticipated recovery, the Company records a charge to investment income (loss) for the difference between fair value and cost at the balance sheet date.

**Allowances for Doubtful Accounts.** The Company maintains allowances for doubtful accounts for estimated losses resulting from the inability of the Company's customers to make required payments. The Company considers the following factors when determining if collection of a fee is reasonably assured: customer credit-worthiness, past transaction history with the customer, current economic industry trends and changes in customer payment terms. If the Company has no previous experience with the customer, the Company typically obtains reports from various credit organizations to ensure that the customer has a history of paying its creditors. The Company may also request financial information, including financial statements or other documents to ensure that the customer has the means of making payment. If these factors do not indicate collection is reasonably assured, revenue is deferred until collection becomes reasonably assured, which is generally upon receipt of cash. If the financial condition of the Company's

customers was to deteriorate, adversely affecting their ability to make payments, additional allowances would be required.

**Inventories.** Inventories are valued at the lower of cost or market (replacement cost, not to exceed net realizable value) using the first-in, first-out method. Recoverability of inventory is assessed based on review of committed purchase orders from customers, as well as purchase commitment projections provided by customers, among other things.

F-9

---

**Table of Contents**

**QUALCOMM Incorporated**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**

**Property, Plant and Equipment.** Property, plant and equipment are recorded at cost and depreciated or amortized using the straight-line method over their estimated useful lives. Buildings and building improvements are depreciated over 30 years and 15 years, respectively. Leasehold improvements are amortized over the shorter of their estimated useful lives or the remaining term of the related lease, not to exceed 15 years. Other property, plant and equipment have useful lives ranging from 2 to 25 years. Direct external and internal costs of developing software for internal use are capitalized subsequent to the preliminary stage of development. Leased property meeting certain capital lease criteria is capitalized, and the net present value of the related lease payments is recorded as a liability. Amortization of capital leased assets is recorded using the straight-line method over the shorter of the estimated useful lives or the lease terms. Maintenance, repairs, and minor renewals and betterments are charged to expense as incurred.

Upon the retirement or disposition of property, plant and equipment, the related cost and accumulated depreciation or amortization are removed, and a gain or loss is recorded.

**Derivatives.** The Company may enter into foreign currency forward and option contracts to manage foreign exchange risk for certain foreign currency transactions and probable anticipated foreign currency revenue transactions. Gains and losses arising from changes in the fair values of foreign currency forward and option contracts that are not designated as hedging instruments are recorded in investment income (expense) as gains (losses) on derivative instruments. Gains and losses arising from the effective portion of foreign currency forward and option contracts that are designated as cash-flow hedging instruments are recorded in accumulated other comprehensive income (loss) as gains (losses) on derivative instruments, net of tax. The amounts are subsequently reclassified into revenues in the same period in which the underlying transactions affect the Company's earnings. The fair value of the Company's foreign currency option contracts used to hedge foreign currency revenue transactions recorded in other current assets was \$4 million and \$29 million at September 26, 2010 and September 27, 2009, respectively, and the value recorded in other current liabilities was \$19 million and \$58 million at September 26, 2010 and September 27, 2009, respectively, substantially all of which were designated as cash-flow hedging instruments. The fair value recorded in other current assets related to the Company's foreign currency forward contracts used to manage foreign exchange risk for certain forecasted payments to be made in Indian rupees in connection with the loan payable to banks, which were not designated as hedging instruments, was \$7 million at September 26, 2010.

In connection with its stock repurchase program, the Company may sell put options that require the Company to repurchase shares of its common stock at fixed prices. The premiums received from put options are recorded as other current liabilities. Changes in the fair value of put options are recorded in investment income (expense) as gains (losses) on derivative instruments. At September 26, 2010 and September 27, 2009, no put options were outstanding.

**Goodwill and Other Intangible Assets.** Goodwill represents the excess of purchase price and related costs over the value assigned to the net tangible and identifiable intangible assets of businesses acquired. Goodwill is tested annually for impairment and in interim periods if certain events occur indicating that the carrying value of goodwill may be impaired.

Acquired intangible assets other than goodwill are amortized over their useful lives unless the lives are determined to be indefinite. Acquired intangible assets are carried at cost, less accumulated amortization. For intangible assets purchased in a business combination or received in a non-monetary exchange, the estimated fair values of the assets received (or, for non-monetary exchanges, the estimated fair values of the assets transferred if more clearly evident) are used to establish the cost bases, except when neither of the values of the assets received or the assets transferred in non-monetary exchanges are determinable within reasonable limits. Valuation techniques consistent with the market approach, income approach and/or cost approach are used to measure fair value. Amortization of finite-lived intangible assets is computed over the useful lives of the respective assets.

**Table of Contents**

**QUALCOMM Incorporated**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**

Weighted-average amortization periods for finite-lived intangible assets, by class, were as follows at September 26, 2010 and September 27, 2009:

Wireless licenses	5 years
Marketing-related	18 years
Technology-based	14 years
Customer-related	5 years
Other	22 years
Total intangible assets	14 years

**Impairment of Long-Lived and Intangible Assets.** The Company assesses potential impairments to its long-lived assets or asset groups when there is evidence that events or changes in circumstances indicate that the carrying amount of an asset or asset group may not be recovered. An impairment loss is recognized when the carrying amount of the long-lived asset or asset group is not recoverable and exceeds its fair value. The carrying amount of a long-lived asset or asset group is not recoverable if it exceeds the sum of the undiscounted cash flows expected to result from the use and eventual disposition of the asset or asset group. Any required impairment loss is measured as the amount by which the carrying amount of a long-lived asset or asset group exceeds its fair value and is recorded as a reduction in the carrying value of the related asset or asset group and a charge to operating results. Intangible assets with indefinite lives are tested annually for impairment and in interim periods if certain events occur indicating that the carrying value of the intangible assets may be impaired.

**Securities Lending.** The Company may engage in transactions in which certain fixed-income and equity securities are loaned to selected broker-dealers. At September 26, 2010 and September 27, 2009, there were no securities loaned under the Company's securities lending program. Cash collateral is held and invested by one or more securities lending agents on behalf of the Company. The Company monitors the fair value of securities loaned and the collateral received and obtains additional collateral as necessary.

**Litigation.** The Company is currently involved in certain legal proceedings. The Company records its best estimate of a loss related to pending litigation when the loss is considered probable and the amount can be reasonably estimated. Where a range of loss can be reasonably estimated with no best estimate in the range, the Company records the minimum estimated liability related to the claim. As additional information becomes available, the Company assesses the potential liability related to the Company's pending litigation and revises its estimates. The Company's policy is to expense legal costs associated with defending itself as incurred.

**Share-Based Compensation.** Share-based compensation expense for equity-classified awards, principally related to stock options and restricted stock units (RSUs), is measured at the grant date, based on the estimated fair value of the award and is recognized over the employee's requisite service period.

The grant-date fair values of employee stock options are estimated using the lattice binomial option-pricing model. The weighted-average estimated fair values of employee stock options granted during fiscal 2010, 2009 and 2008 were \$12.40, \$14.27 and \$15.97 per share, respectively. The following table presents the weighted-average assumptions (annualized percentages) used to estimate the fair values of employee stock options granted in the periods presented:

	2010	2009	2008
Volatility	33.8%	42.7%	41.1%
Risk-free interest rate	2.5%	2.6%	3.8%
Dividend yield	1.5%	1.5%	1.3%
Post-vest forfeiture rate	9.8%	9.2%	8.0%
Suboptimal exercise factor	1.8	1.9	1.9

The Company uses the implied volatility of market-traded options in the Company's stock to determine the expected volatility. The term structure of volatility is used up to approximately two years, and the Company uses the

implied volatility of the option with the longest time to maturity for periods beyond two years. The risk-free interest rate is based upon observed interest rates appropriate for the terms of the Company's employee stock options. The Company does not target a specific dividend yield for its dividend payments but is required to assume a dividend yield as an input to the binomial model. The dividend yield is based on the Company's history and expectation of future dividend payouts and may be subject to substantial change in the future. The post-vest forfeiture rate and

F-11

---

**Table of Contents**

**QUALCOMM Incorporated**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**

suboptimal exercise factor are based on the Company's historical option cancellation and employee exercise information, respectively.

The expected life of employee stock options is a derived output of the binomial model and is impacted by all of the underlying assumptions used by the Company. The weighted-average expected life of employee stock options granted, as derived from the binomial model, was 5.5 years, 5.6 years and 5.9 years during fiscal 2010, 2009 and 2008, respectively.

The grant-date fair values of RSUs are estimated based on the fair market values of the underlying stock on the dates of grant. The weighted-average estimated fair values of employee RSUs granted during fiscal 2010 and 2008 were \$35.61 and \$54.42 per share, respectively. No RSUs were granted in fiscal 2009. Shares are issued on the vesting dates net of the amount of shares needed to satisfy statutory tax withholding requirements to be paid by the Company on behalf of the employees. As a result, the actual number of shares issued will be fewer than the actual number of RSUs outstanding.

Share-based compensation expense is adjusted to exclude amounts related to share-based awards that are expected to be forfeited. The annual pre-vest forfeiture rate for stock options and RSUs granted in fiscal 2010 was estimated to be approximately 3% based on historical experience. The effect of pre-vest forfeitures on the Company's recorded expense in fiscal 2010, 2009 and 2008 for awards granted prior to fiscal 2010 was negligible due to the predominantly monthly vesting of stock options that were granted in those periods.

Total estimated share-based compensation expense, related to all of the Company's share-based awards, was comprised as follows (in millions):

	<b>2010</b>	<b>2009</b>	<b>2008</b>
Cost of equipment and services revenues	\$ 42	\$ 41	\$ 39
Research and development	300	280	250
Selling, general and administrative	273	263	254
Share-based compensation expense before income taxes	615	584	543
Related income tax benefit	(170)	(129)	(176)
Share-based compensation expense, net of income taxes	\$ 445	\$ 455	\$ 367

The Company recorded \$119 million, \$106 million and \$135 million in share-based compensation expense during fiscal 2010, 2009 and 2008, respectively, related to share-based awards granted during those periods. The remaining share-based compensation expense primarily related to stock option awards granted in earlier periods. In addition, for fiscal 2010, 2009 and 2008, \$45 million, \$79 million and \$408 million, respectively, were reclassified to reduce net cash provided by operating activities with an offsetting increase in net cash used by financing activities in the consolidated statements of cash flows to reflect the incremental tax benefits from stock options exercised in those periods. The amount of compensation cost capitalized related to share-based payment awards was negligible for all periods presented.

**Foreign Currency.** Foreign subsidiaries operating in a local currency environment use the local currency as the functional currency. Resulting translation gains or losses are recognized as a component of other comprehensive income. Where the United States dollar is the functional currency, resulting translation gains or losses are recognized in the statements of operations. Transaction gains or losses related to balances denominated in a different currency than the functional currency are recognized in the statement of operations. Net foreign currency transaction gains included in the Company's statement of operations were negligible in fiscal 2010, 2009 and 2008.

**Comprehensive Income.** Comprehensive income is defined as the change in equity of a business enterprise during a period from transactions and other events and circumstances from non-owner sources, including foreign currency translation adjustments and unrealized gains and losses on marketable securities. The Company presents

comprehensive income in its consolidated statements of stockholders' equity. The reclassification adjustment for net realized gains results from the recognition of the net realized gains in the statements of operations when marketable securities are sold or derivative instruments are settled. The reclassification adjustment for other-than-temporary losses on marketable securities included in net income results from the recognition of the unrealized losses in the statements of operations when they are no longer viewed as temporary. The portion of other-than-temporary impairment losses related to noncredit factors and subsequent changes in fair value included in comprehensive income is shown separately from other unrealized gains or losses on marketable securities.

Components of accumulated other comprehensive income consisted of the following (in millions):

F-12

---

Table of Contents

**QUALCOMM Incorporated**  
**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**

	September 26, 2010	September 27, 2009
Noncredit other-than-temporary impairment losses and subsequent changes in fair value related to certain marketable debt securities, net of income taxes	\$ 62	\$ 71
Net unrealized gains on marketable securities, net of income taxes	723	574
Net unrealized losses on derivative instruments, net of income taxes	(8)	(17)
Foreign currency translation	(80)	(40)
	\$ 697	\$ 588

Total comprehensive income consisted of the following (in millions):

	2010	2009	2008
Net income	\$ 3,247	\$ 1,592	\$ 3,160
Other comprehensive income:			
Foreign currency translation	(40)	(25)	(12)
Noncredit other-than-temporary impairment losses and subsequent changes in fair value related to certain marketable debt securities, net of income taxes of (\$5), \$12 and \$0, respectively	21	135	
Net unrealized gains (losses) on other marketable securities and derivative instruments, net of income taxes of \$74, (\$5) and \$373, respectively	392	261	(738)
Reclassification of net realized gains on marketable securities and derivative instruments included in net income, net of income taxes of (\$12), \$75 and \$48, respectively	(380)	(93)	(72)
Reclassification of other-than-temporary losses on marketable securities included in net income, net of income taxes of (\$5), \$130 and \$201, respectively	116	613	301
Total other comprehensive income (loss)	109	891	(521)
Total comprehensive income	\$ 3,356	\$ 2,483	\$ 2,639

At September 26, 2010, accumulated other comprehensive income includes \$36 million of other-than-temporary losses on marketable debt securities related to factors other than credit, net of income taxes.

**Earnings Per Common Share.** Basic earnings per common share is computed by dividing net income by the weighted-average number of common shares outstanding during the reporting period. Diluted earnings per common share is computed by dividing net income by the combination of dilutive common share equivalents, comprised of shares issuable under the Company's share-based compensation plans and shares subject to written put options, and the weighted-average number of common shares outstanding during the reporting period. Dilutive common share equivalents include the dilutive effect of in-the-money share equivalents, which are calculated based on the average share price for each period using the treasury stock method. Under the treasury stock method, the exercise price of an option, the amount of compensation cost, if any, for future service that the Company has not yet recognized, and the amount of estimated tax benefits that would be recorded in paid-in capital, if any, when the award is settled are assumed to be used to repurchase shares in the current period. The incremental dilutive common share equivalents,

calculated using the treasury stock method, for fiscal 2010, 2009 and 2008 were 15,652,000, 16,900,000 and 27,618,000, respectively.

Employee stock options to purchase 149,007,000, 136,309,000 and 102,397,000 shares of common stock during fiscal 2010, 2009 and 2008, respectively, were outstanding but not included in the computation of diluted earnings per common share because the effect would be anti-dilutive. In addition, 235,000 and 2,388,000 shares of other common stock equivalents outstanding in fiscal 2010 and 2008, respectively, were not included in the computation of diluted earnings per common share because the effect would be anti-dilutive.

**Note 2. Fair Value Measurements**

Fair value is defined as the exchange price that would be received for an asset or paid to transfer a liability (an exit price) in the principal or most advantageous market for the asset or liability in an orderly transaction between market participants as of the measurement date. Applicable accounting guidance provides an established hierarchy for inputs used in measuring fair value that maximizes the use of observable inputs and minimizes the use of unobservable inputs by requiring that the most observable inputs be used when available. Observable inputs are inputs that market participants would use in valuing the asset or liability and are developed based on market data obtained from sources independent of the Company. Unobservable inputs are inputs that reflect the Company's assumptions about the factors that market participants would use in valuing the asset or liability. There are three levels of inputs that may be used to measure fair value:

Level 1 includes financial instruments for which quoted market prices for identical instruments are available in active markets.

Level 2 includes financial instruments for which there are inputs other than quoted prices included within Level 1 that are observable for the instrument such as quoted prices for similar instruments in active markets, quoted prices for identical or similar instruments in markets with insufficient volume or infrequent transactions (less active markets) or model-driven valuations in which significant inputs are observable or can be derived principally from, or corroborated by, observable market data.

Level 3 includes financial instruments for which fair value is derived from valuation techniques in which one or more significant inputs are unobservable, including the Company's own assumptions. The pricing models incorporate transaction details such as contractual terms, maturity and, in certain instances, timing and amount of future cash flows, as well as assumptions related to liquidity and credit valuation adjustments of marketplace participants.

Assets and liabilities are classified based on the lowest level of input that is significant to the fair value measurements. The Company reviews the fair value hierarchy classification on a quarterly basis. Changes in the observability of valuation inputs may result in a reclassification of levels for certain securities within the fair value hierarchy.

The following table presents the Company's fair value hierarchy for assets and liabilities measured at fair value on a recurring basis at September 26, 2010 (in millions):

	<b>Level 1</b>	<b>Level 2</b>	<b>Level 3</b>	<b>Total</b>
<b>Assets</b>				
Cash equivalents	\$ 2,499	\$ 687	\$	\$ 3,186
Marketable securities				
U.S. Treasury securities and government-related securities	30	624		654
Corporate bonds and notes		4,999		4,999
Mortgage- and asset-backed securities		661	6	667
Auction rate securities			126	126
Non-investment-grade debt securities		3,353	12	3,365
Common and preferred stock	1,086	636		1,722
Equity mutual and exchange-traded funds	979			979
Debt mutual funds		1,943		1,943
