Edgar Filing: NRG ENERGY INC - Form 10-K405

PART I

ITEM 1 -- BUSINESS

GENERAL

NRG Energy, Inc. (NRG Energy or the Company) is a leading global energy company, primarily engaged in the acquisition, development, ownership, and operation of power generation facilities and the sale of energy, capacity and related products in the United States and internationally. NRG Energy believes it is one of the three largest independent power generation companies in the world, measured by its net ownership interest in power generation facilities. As of December 31, 2001, NRG Energy owned all or a portion of 76 generation projects, including projects under construction, that have a total generating capacity of 38,388 megawatts (MW). Its current net ownership interest in those projects is 24,357 MW, of which 19,077 MW are located in the United States.

As the following table illustrates, NRG Energy has grown significantly during recent years, primarily as a result of its success in acquiring domestic power generation facilities:

	YEAR ENDED DECEMBER 31,					
	1997	1998	1999	2000	2001	CAGR
	(IN THOUSANDS, EXCEPT MW DATA)					
Net Ownership Interest						
(In MW at end of period) (1).....	2,637	3,300	10,990	15,007	24,357	74%
Operating Income.....	\$18,109	\$57,012	\$109,520	\$573,073	\$714,822	151%
EBITDA(2).....	\$39,790	\$82,711	\$161,516	\$692,548	\$954,835	121%
Net Income.....	\$21,982	\$41,732	\$ 57,195	\$182,935	\$265,204	86%

(1) Includes projects under construction; MW under construction for the years 1997, 1998, 1999, 2000 and 2001 were 616, 284, 252, 747, and 4,775, respectively.

(2) EBITDA is the sum of income (loss) before income taxes, interest expense (net of capitalized interest) and depreciation and amortization expense. EBITDA is a measure of financial performance not defined under generally accepted accounting principles, which should not be considered in isolation or as a substitute for net income, cash flows from operations or other income or cash flow data prepared in accordance with generally accepted accounting principles or as a measure of a company's profitability or liquidity. In addition, EBITDA as calculated by NRG Energy may not be comparable to similarly titled measures presented by other companies, and therefore could be misleading because all companies and analysts do not calculate it in the same fashion.

NRG Energy has experienced significant growth in the last year, expanding from 15,007 MW of net ownership interests in power generation facilities (including those under construction) as of December 31, 2000, to 24,357 MW of net ownership interests as of December 31, 2001. NRG Energy has a well diversified portfolio in terms of location, fuel and dispatch mode.

NRG Energy is organized into four regionally-based divisions: NRG North America, based in Minneapolis, Minnesota; NRG Europe, based in London; NRG

Edgar Filing: NRG ENERGY INC - Form 10-K405

Asia-Pacific based in Brisbane, Australia and NRG Latin America, based in Miami, Florida. Most of NRG Energy's North American projects are grouped under regional holding companies corresponding to their domestic core market. NRG Energy operates its generation facilities within each region as a separate operating unit within its power generation business. This regional portfolio structure allows NRG Energy to coordinate the operations of its assets to take advantage of regional opportunities, reduce risks related to outages, whether planned or unplanned, and pursue expansion plans on a regional basis.

NRG Energy's international power generation projects are managed as three distinct markets, Asia-Pacific, Europe and Other Americas.

1

In addition to NRG Energy's power generation projects, NRG Energy also has interests in district heating and cooling systems and steam transmission operations.

NRG Energy intends to continue its growth through a combination of targeted acquisitions in selected core markets, the expansion or repowering of existing facilities and the development of new greenfield projects. However, in the short term, recognizing market conditions, NRG Energy anticipates that its growth level will be lower than in recent years. As of December 31, 2001, NRG Energy had signed agreements to acquire an additional 3,571 MW of net ownership interest in existing generation projects. Currently, NRG Energy has scheduled expansion, repowering or greenfield generation projects that would add 5,308 MW of net ownership interest.

NRG Energy has also expanded its power marketing activities, which allow NRG Energy to optimize the value of its power generation assets and enable it to better meet its customers' energy requirements. By linking NRG Energy's capabilities and access to fuel supplies with its power marketing and risk management expertise, NRG Energy believes that it effectively manages risk, and has secured and will continue to secure favorable pricing for its fuel purchases and power sales.

NRG Energy was incorporated as a Delaware corporation on May 29, 1992. Its headquarters and principal executive offices are located at 901 Marquette Avenue, Suite 2300, Minneapolis, Minnesota 55402. NRG Energy's telephone number is (612) 373-5300.

On June 5, 2000, NRG Energy completed its initial public offering. Prior to its initial public offering, NRG Energy was a wholly owned subsidiary of Northern States Power (NSP). In August 2000, NSP merged with New Century Energies, Inc. (NCE), a Colorado-based public utility holding company. The surviving corporation in the merger was renamed Xcel Energy Inc. (Xcel Energy), and the shares of NRG Energy's class A common stock previously owned by NSP are now owned by a wholly-owned subsidiary of Xcel Energy. As of December 31, 2000, Xcel Energy indirectly owned an 82% interest in NRG Energy's outstanding common and class A common stock, representing 98% of the total voting power of NRG Energy's common stock and class A common stock. Xcel Energy directly owns six utility subsidiaries that serve electric and natural gas customers in 12 states. Xcel Energy also owns or has interest in a number of nonregulated businesses, the largest of which is NRG Energy.

In March 2001, NRG Energy completed a public offering of 18.4 million shares of its common stock. Following this offering, Xcel Energy indirectly owns a 74% interest in NRG Energy's common stock and class A common stock, representing 96.7% of the total voting power of NRG Energy's common stock and class A common stock.

Edgar Filing: NRG ENERGY INC - Form 10-K405

XCEL ENERGY EXCHANGE OFFER

In February 2002, Xcel Energy announced its intention to commence an exchange offer by which Xcel Energy would acquire all of the outstanding publicly held shares of NRG Energy. In its announcement, Xcel Energy stated its intention to close the transaction in April 2002, and stated that NRG Energy shareholders would receive 0.4846 shares of Xcel Energy common stock in a tax-free exchange for each outstanding share of NRG Energy common stock.

After completion of the merger, NRG Energy would be an indirect, wholly owned subsidiary of Xcel Energy. NRG Energy's debt and other obligations will continue to be the sole obligation of NRG Energy.

On March 13, 2002, Xcel Energy filed a registration statement on Form S-4 with the Securities and Exchange Commission and commenced the exchange offer. In its registration statement, Xcel Energy stated that, if the exchange offer and merger are completed, its plans for NRG Energy in 2002 include: infusing an additional \$300 million of equity into NRG Energy, in addition to an initial loan of \$300 million recently made to NRG Energy; slowing NRG Energy's growth in megawatt capacity and the possible sale of \$1.9 billion of existing generating assets; canceling or deferring approximately \$1.6 billion of planned projects; and beginning the process of selling unassigned turbines and deferring installment of additional unassigned turbines.

2

In addition, Xcel Energy stated in its registration statement that if the offer and merger are completed and its plans for NRG Energy are implemented, it expects to reduce NRG Energy's business development activities and administrative and general costs, with annual estimated cost savings of approximately \$45 million, and to capture infrastructure savings by consolidating trading and marketing organizations, where appropriate.

MARKET OPPORTUNITY

The power industry is one of the largest industries in the world, accounting for approximately \$225 billion in annual revenues and approximately 830,000 MW of installed generating capacity in the United States alone. The generation segment of the industry historically has been characterized by regulated electric utilities producing and selling electricity to a captive customer base. However, the power generation market has been evolving from a regulated market based on cost of service pricing to a competitive market. In response to increasing customer demand for access to low-cost electricity and enhanced services, new regulatory initiatives have been and are continuing to be adopted to increase competition in the power industry.

Outside of the United States, governments in developed economies are privatizing their utilities and developing regulatory structures that are expected to encourage competition in the electricity sector, having realized that their energy assets can be sold to raise capital without hindering system reliability. In developing countries, the demand for electricity is expected to grow rapidly. In order to satisfy this anticipated increase in demand, many countries have adopted active government programs designed to encourage private investment in power generation facilities. NRG Energy believes that these market trends will continue to create opportunities to acquire and develop power generation facilities globally.

STRATEGY

NRG Energy's vision has been to be a leading global generation company with a top three position in selected core markets, which provides superior

Edgar Filing: NRG ENERGY INC - Form 10-K405

performance to all stakeholders. Central to this vision is the development and management of diverse regional portfolios of competitive power generating facilities. This diversity includes geographic location, fuel type and dispatch profile. Currently, approximately 78% of NRG Energy's net MW of generation in operation and under construction is located in the United States in five core markets: Northeast, South Central and West Coast regions and the recently added North Central and Mid Atlantic regions. With NRG Energy's diversified asset base, NRG Energy seeks to have generating capacity available to back up any given facility during its outages, whether planned or unplanned, while having ample resources to take advantage of peak power market price opportunities and periods of constrained availability of generating capacity, fuels and transmission. NRG Energy's primary focus has been on generation assets powered primarily by natural gas, coal, oil and to a lesser extent landfill gas, hydro, refuse derived fuel and biomass technologies.

NRG Energy's strategy is to capitalize on its acquisition, development, construction and operating skills to build a balanced portfolio of power generation assets. NRG Energy intends to implement this strategy by continuing a disciplined acquisition program, recognizing current market conditions. NRG Energy believes that its facility operations and engineering expertise, fuel and environmental strategies, labor and governmental relations expertise, legal and financial skills give it a competitive advantage in the independent power market.

NORTH AMERICAN POWER GENERATION

While NRG Energy expects the North American power generation market to continue to evolve from a regulated, utility dominated market based upon cost-of-service pricing to an independent power generation market based on competitive market pricing, the pace of this evolution slowed in 2001 as a result of the energy crisis in California, and more recently, the Enron bankruptcy. Most domestic generation capacity is still utility owned and subject to cost-of-service regulation. NRG Energy expects the evolution to continue as non-regulated power generators build new capacity to meet demand, but, in view of current market and forward

3

prices, and the credit and liquidity constraints reported by many competitive power producers in recent months, NRG Energy expects such new capacity development to be less than has been forecast.

Most of NRG Energy's North American projects are grouped under regional holding companies corresponding to their domestic core markets. In order to better manage NRG Energy's North American projects and to develop new projects in these regions more effectively, NRG Energy has established regional offices in Pittsburgh, Pennsylvania (Northeast region), Baton Rouge, Louisiana (South Central region) and San Diego, California (West Coast region). NRG Energy's recently added North Central and Mid Atlantic regions are managed from its Minneapolis headquarters and Wilmington, Delaware offices, respectively.

NRG Energy operates its generation facilities within each region as a separate operating unit within its power generation business. This regional portfolio structure allows NRG Energy to coordinate the operations of its assets to take advantage of regional opportunities, reduce risks related to outages, whether planned or unplanned, and pursue expansion plans on a regional basis.

NORTHEAST REGION

As of December 31, 2001, NRG Energy owned approximately 7,676 MW of net generating capacity (including projects under construction) in the Northeast

Edgar Filing: NRG ENERGY INC - Form 10-K405

United States and Canada, primarily in New York, Connecticut and Massachusetts. These generation facilities are well diversified in terms of dispatch level (base-load, intermediate and peaking), fuel type (coal, natural gas and oil) and customers. In addition, NRG Energy believes certain of its facilities and facility sites in the Northeast provide opportunities for repowering or expanding existing generating capacity.

NRG Energy's Northeast facilities are generally competitively positioned within their respective market dispatch levels with favorable market dynamics and locations close to the major load centers in the New York Power Pool (NYPP) and New England Power Pool (NEPOOL).

SOUTH CENTRAL REGION

As of December 31, 2001, NRG Energy owned approximately 4,716 MW of net generating capacity (including projects under construction) in the South Central United States, primarily in Louisiana, Oklahoma, Texas and Mississippi. NRG Energy's South Central generating assets consist primarily of its net ownership of 1,947 MW of power generation facilities in New Roads, Louisiana (which are referred to as the Cajun facilities) that were acquired in March 2000 and the recently completed Big Cajun Peak (238 MW). The South Central region also includes the Sterlington (202 MW), McClain (400 MW), Batesville (837 MW), Mustang (122 MW), and Sabine River (210 MW) generating facilities. In addition, the Bayou Cove (320 MW) and Brazos Valley (633 MW) facilities are under construction. The construction of the following additional facilities with a net generating capacity of 2,680 MW is planned: Kaufman (545 MW), Batesville expansion (292 MW), Big Cajun II, Unit 4 (675 MW) and Pike (1,168 MW).

WEST COAST REGION

As of December 31, 2001, NRG Energy owned approximately 1,596 MW of net generating capacity on the West Coast of the United States, primarily California and Nevada. NRG Energy's West Coast generation assets consist primarily of a 50% interest in West Coast Power LLC (West Coast Power), a 58% interest in the Crockett Cogeneration facility (138 MW) and a 50% interest in the Saguaro generation facility (53 MW). In May 1999, Dynegy Power Corporation (Dynegy) and NRG Energy formed West Coast Power to serve as the holding company for a portfolio of operating companies that own generation assets in Southern California. This portfolio currently is comprised of the El Segundo Generating Station (510 MW), the Long Beach Generating Station (265 MW), the Encina Generating Station (483 MW) and 17 combustion turbines in the San Diego area (127 MW). Dynegy provides power marketing and fuel procurement services to West Coast Power, and NRG Energy provides operations and management services. NRG Energy believes certain of its facilities and facility sites on the West Coast provide opportunities for repowering or expanding generating capacity.

4

NORTH CENTRAL REGION

As of December 31, 2001, NRG Energy owned approximately 3,706 MW of net generating capacity in the north central United States, primarily in Illinois, Missouri and Michigan. NRG Energy's North Central portfolio includes the 640 MW simple cycle, gas-fired Audrain power generation facility, located in Vandalia, Missouri. In August 2001, NRG Energy purchased a project portfolio from Indeck Energy Services which includes the Rockford I (342 MW) and Rockford II (171 MW) Energy Centers, located 75 miles west of Rockford, Illinois. Rockford II is currently under construction with commercial operation expected in June 2002. Other North Central projects in operation include Rocky Road (175 MW), Morris Cogeneration (23 MW) and Cadillac Renewable Energy (19 MW). Two additional projects in Illinois currently under construction will add 1,168 MW each to NRG

Edgar Filing: NRG ENERGY INC - Form 10-K405

Energy's North Central portfolio. Kendall is estimated to be in commercial operation in May 2002, and Nelson in the third quarter of 2003.

MID-ATLANTIC REGION

As of December 31, 2001, NRG Energy owned approximately 1,199 MW of net generating capacity in the Mid-Atlantic region of the United States, primarily Delaware, Maryland, Ohio and Pennsylvania. In June 2001, NRG Energy completed the acquisition of approximately 1,081 MW of operational generating facilities from Conectiv. In January 2002, NRG Energy closed the acquisition of the Commonwealth Atlantic generating facility (188 MW) and the James River generating facility (55 MW) from Edison Mission and expects to close on the FirstEnergy acquisition of approximately 2,535 MW of generating facilities during the second quarter of 2002.

COMPETITIVE POWER GENERATION -- INTERNATIONAL

Historically, the majority of power generating capacity outside of the United States has been owned and controlled by governments. During the past decade, however, many foreign governments moved to privatize power generation plant ownership through sales to third parties and by encouraging new capacity development and refurbishment of existing assets by independent power developers. Governments have taken a variety of approaches to encourage the development of competitive power markets, from awarding long-term contracts for energy and capacity to purchasers of power generation to creating competitive wholesale markets for selling and trading energy, capacity and related products.

NRG Energy has taken advantage of opportunities to invest in attractive projects in international markets. To manage NRG Energy's international asset portfolio risks, NRG Energy utilizes a portfolio risk management discipline based upon country risk, as identified by an independent, internationally recognized organization. Using this tool, NRG Energy is able to monitor the exposure it is taking in emerging markets to maintain an appropriate balance in its asset portfolio. NRG Energy's international power generation projects are managed as three distinct markets, Asia Pacific, Europe and Other Americas.

ASIA PACIFIC

NRG Energy is one of the largest competitive power producers in Australia and, with its 2001 acquisitions in Taiwan and India, now has a net ownership interest of 2,297 MW, as of December 31, 2001, in power generation facilities.

EUROPE

NRG Energy is a participant in the competitive power generation markets in Germany, the Czech Republic, the United Kingdom, and Hungary. As of December 31, 2001, NRG Energy has a net ownership interest of 1,854 MW in power generation facilities (including projects under construction) in Europe. During 2001, NRG Energy increased its ownership interest in the MIBRAG and Schkopau projects in April 2001, both of which are located in Germany and completed its acquisition of the Csepel facility located in Hungary in June 2001.

OTHER AMERICAS

NRG Energy has pursued acquisition and development opportunities in Latin America since the mid-1990s. Initially, NRG Energy participated as one of four original sponsors of the Latin Power Fund, a private equity investment fund managed by Scudder. As of December 31, 2001, NRG Energy has ownership of 1,107 MW in Latin America. NRG Energy currently owns and operates 270 MW of hydro and

Edgar Filing: NRG ENERGY INC - Form 10-K405

thermal electric operating assets in Bolivia and is the second largest generator in that country. Similarly, NRG Energy owns and operates 111 MW of hydro and thermal electric operating assets in Peru. NRG Energy owns a 99% interest in a 156 MW hydro facility under construction in Brazil set to enter commercial operation in the third quarter 2002. In addition, NRG Energy recently formed a partnership venture with Petrobras Brasileiros SA, the large state owned Brazilian oil company, to construct, own and operate a 1,040 MW gas-fired thermal facility in which it will own a 50% share. The TermoRio Project, currently under construction, is expected to enter full commercial operations in March 2004.

ALTERNATIVE ENERGY

NRG Energy provides alternative energy through NEO Corporation (NEO), one of the largest landfill gas generation companies in the United States, and NRG Resource Recovery, which processes municipal solid waste as fuel used to generate power.

NEO CORPORATION

NEO is a wholly owned subsidiary of NRG Energy that was formed to develop power generation facilities, ranging in size from 1 to 50 MW, in the United States. NEO is currently focusing on the development and acquisition of distributed generation and peaking facilities and the acquisition of small hydroelectric projects. NEO owns and operates 31 landfill gas collection systems and has 46 MW of net ownership interests in related electric generation facilities utilizing landfill gas as fuel. NEO also has 42 MW of net ownership interests in 18 hydroelectric facilities and 109 MW of net ownership interests in seven distributed generation facilities. The company's operations are located primarily in the east and west coast regions of the United States. NEO derives a substantial portion of its income as a result of the generation of Section 29 tax credits, which, for 2001, totaled \$48.6 million. The existing tax law authorizing these credits is scheduled to expire after 2007.

RESOURCE RECOVERY FACILITIES

NRG Energy's Resource Recovery business is focused on owning and operating alternative fuel/"green power" generation and fuels processing projects. The alternative fuels currently processed and combusted are municipal solid waste (MSW), of which more than 90% is processed into refuse derived fuel (RDF), urban wood waste (pallets, clean construction debris, etc.), forest industry waste wood (bark, sawmill waste, tree trimmings, etc.), agricultural waste (walnut shells, olive pits, peanut shells, etc.), and non-recyclable waste paper and compost. Processing and recovery for generation into electricity and other products is an environmentally superior method of waste management when compared to adding to existing or creating new landfills. NRG Energy's Resource Recovery business has MSW processing capacity of over 4,000 tons per day and generation capacity of 35 MW, of which its net ownership interest is 26 MW.

NRG Energy's Resource Recovery business owns and operates MSW processing and/or generation facilities in Maine and Minnesota. This business also owns and operates a biomass fired generation facility in Florida and a wood processing facility in Georgia, which supplies a portion of the biomass fuel to the power plant in Florida. In addition to the fuels processing and generation portfolio, Resource Recovery owns and operates several mono-ash landfills that receive ash from the biomass and waste-to-energy power plants that are owned and operated. Resource Recovery also owns and operates NRG Processing Solutions that includes thirteen composting and biomass fuel processing sites in Minnesota of which three sites are permitted to operate as MSW transfer stations. A majority of Resource Recovery's facilities are under long-term contract for either the fuel processing and/or its generation capacity.

THERMAL

NRG Energy has interests in district heating and cooling systems and steam transmission operations. NRG Energy's thermal and chilled water businesses have a steam and chilled water capacity equivalent to approximately of 1,641 MWT, of which its net ownership interest is 1,514 MWT.

NRG Energy owns and operates, through its holding company NRG Thermal Corporation, five district heating and cooling systems in Minneapolis, Minnesota, San Francisco, California, Pittsburgh, Pennsylvania, Harrisburg, Pennsylvania and San Diego, California. These systems provide steam heating to approximately 600 customers and chilled water to 90 customers. In addition, NRG Energy's thermal division operates five projects that serve industrial/government customers with high-pressure steam and hot water. NRG Thermal also owns and operates an 88 MW combustion turbine peaking generation facility and an 18 MW coal-fired cogeneration facility in Dover, Delaware.

POWER MARKETING

NRG Energy's energy marketing subsidiary, NRG Power Marketing, Inc. (NRG Power Marketing), began operations in 1998 to maximize the utilization of and return from its domestic generation assets and to mitigate the risks associated with those assets. This subsidiary markets energy and energy related commodities, including electricity, natural gas, oil, coal and emission allowance credits. By using internal resources to acquire fuel and market electricity, NRG Energy believes it can secure the best pricing available in the markets in which it sells power and enhance its ability to compete. NRG Power Marketing provides a full range of energy management services for NRG Energy's generation facilities in its Northeast, South Central, North Central and Mid Atlantic regions. These services are provided under power sales and agency agreements pursuant to which NRG Power Marketing manages the sales and marketing of energy, capacity and ancillary services from these facilities and also manages the purchase and sale of fuel and emission allowance credits needed to operate these facilities.

NRG Energy is very disciplined in its approach to power marketing risk management. NRG Power Marketing conducts its activities in accordance with risk management guidelines approved by the NRG Power Marketing Board of Directors, which has primary responsibility for oversight of NRG Power Marketing activities. Accordingly, NRG Energy has established counter-party concentration limits and portfolio VaR limits. NRG Energy's risk management guidelines require that its treasury department perform a credit review and approve all counter-parties and credit limits prior to NRG Power Marketing entering into a transaction with such counter-parties. NRG Energy attempts to balance its fixed-price physical and financial purchases and sales commitments in terms of contract volumes and the timing of performance and delivery obligations. However, uncovered market positions are taken within guidelines established by the board of directors of NRG Power Marketing. Contracts for the transmission and transportation of these commodities are also authorized, as necessary, in order to meet physical delivery requirements and obligations.

HOW NRG ENERGY SELLS ITS GENERATING CAPACITY AND ENERGY

NRG Energy's operating revenues are derived primarily from the sale of electrical energy, capacity and other energy products from its power generation facilities. Revenues from these facilities are received pursuant to:

- long-term contracts of more than one year including:

Edgar Filing: NRG ENERGY INC - Form 10-K405

- power purchase agreements with utilities and other third parties (generally 2-25 years);
- standard offer agreements to provide load serving entities with a percentage of their requirements (generally 4-9 years); and
- "transition" power purchase agreements with the former owners of acquired facilities (generally 3-5 years).

7

- short-term contracts or other commitments of one year or less and spot sales including:
 - spot market and other sales into various wholesale power markets; and
 - bilateral contracts with third parties.

NRG Energy strives to mitigate variability in its earnings by having approximately 50% of its capacity contracted for under contracts with lengths of greater than one year, generally seeking to enter into contracts with lengths of 1-5 years, selling half of its remaining capacity (25%) in the forward market for 30-365 days, and selling the other half of its remaining capacity (25%) in the spot market to capture opportunities in the market when prices are higher. By following this strategy, NRG Energy seeks to achieve positive, stable returns while retaining the flexibility to capture premium returns when available.

NRG Power Marketing handles fuel procurement and trading of emissions allowances in order to support NRG Energy's overall needs. Generally, NRG Energy seeks to hedge prices for 50% to 70% of its expected fuel requirements during the succeeding 12 to 24 month period. This provides NRG Energy with certainty as to a portion of its fuel costs while allowing it to maintain flexibility to address lower than expected dispatch rates and to take advantage of the dual fuel capabilities at many of its facilities.

SIGNIFICANT CUSTOMERS

During 2001, NRG Energy derived approximately 40.5% of its 2001 revenues from majority owned operations from two customers: New York Independent System Operator (26.7%) and Connecticut Light and Power Company (13.8%). During 2000, NRG Energy derived approximately 34.4% of its 2000 revenues from majority owned operations from two customers: New York Independent System Operator (22.2%) and Connecticut Light and Power Company (12.2%). During 1999, NRG Energy derived approximately 51.2% of total revenues from wholly owned operations from three customers: Niagara Mohawk Power Corporation (21%), Consolidated Edison Company of New York, Inc. (19.7%) and Eastern Utilities Associates (10.5%).

SEGMENT INFORMATION

For financial information on NRG Energy's operations on a geographical and on a segment basis, see Item 8 -- Note 18 to the Consolidated Financial Statements.

PLANT OPERATIONS

NRG Energy's success depends on its ability to achieve operational efficiencies and high availability at its generation facilities. In the new unregulated energy industries, minimizing operating costs without compromising safety or environmental standards while maximizing plant flexibility and maintaining high reliability is critical to maximizing profit margins. NRG Energy's operations and maintenance practices are designed to achieve these

Edgar Filing: NRG ENERGY INC - Form 10-K405

goals.

NRG Energy's overall corporate strategy of establishing a top three presence in certain core markets is in part driven by its operational strategy. NRG Energy's approach to plant management emphasizes the operational autonomy of its individual plant managers and staff to identify and resolve operational and maintenance issues at their respective facilities. NRG Energy has also implemented a regional shared practices system in order to facilitate the exchange of information and best practices among the plants in its various regions. NRG Energy has organized its operations geographically such that inventories, maintenance, backup and other operational functions are pooled within a region. This approach enables NRG Energy to realize cost savings and enhances its ability to meet its facility availability goals.

SIGNIFICANT ASSET AND BUSINESS ACQUISITIONS

GRANITE POWER PARTNERS

In January 2001, NRG Energy purchased from LS Power LLC a 5,339 MW portfolio of operating projects and projects in construction and advanced development that are located primarily in the north central

8

and south central United States. Approximately 3,295 MW are currently in operation or under construction. Each facility employs natural gas-fired, combined-cycle technology. Through December 31, 2005, NRG Energy also has the opportunity to acquire ownership interests in an additional 3,000 MW of generation projects developed and offered for sale by LS Power and its partners.

BATESVILLE

In March 2001, NRG Energy purchased from Cogentrix the remaining 430 MW or 51.37% interest, in a 837 MW natural gas-fired combined-cycle plant in Batesville, Mississippi. NRG Energy acquired a 48.63% interest in the plant in January 2001 from LS Power.

AUDRAIN

In June 2001, NRG Energy purchased a 640 MW natural gas-fired power plant in Audrain County, Missouri from Duke Energy North America LLC.

BRAZOS VALLEY

In June 2001, NRG Energy closed on the construction financing for the Brazos Valley generating facility a 633 MW gas-fired power plant in Fort Bend County, Texas that NRG Energy will build, operate and manage. At the time of the closing, NRG Energy also became 100% owner of the project by purchasing STEAG Power LLC's 50% interest in the project. Commercial operation is expected in June 2003.

CONECTIV

In June 2001, NRG Energy purchased 1,081 MW of interests in power generation plants from a subsidiary of Conectiv. NRG Energy acquired a 100% interest in the 784 MW coal-fired Indian River Generating Station located near Millsboro, Delaware and in the 170 MW oil-fired Vienna Generating Station located in Vienna, Maryland. In addition, NRG Energy acquired 64 MW of the 1,711 MW coal-fired Conemaugh Generating Station located approximately 60 miles east of Pittsburgh, Pennsylvania and 63 MW of the 1,711 MW coal-fired Keystone Generating Station located approximately 50 miles east of Pittsburgh, Pennsylvania.

Edgar Filing: NRG ENERGY INC - Form 10-K405

POWERGEN

In June 2001, NRG Energy purchased a 389 MW gas-fired power plant and a 116 MW thermal power plant, both of which are located on Csepel Island in Budapest, Hungary, from PowerGen. In April 2001, NRG Energy also purchased from PowerGen its interest in Saale Energie GmbH and its 33.3% interest in MIBRAG BV. By acquiring PowerGen's interest in Saale Energie, NRG Energy increased its ownership interest in the 960 MW coal-fired Schkopau power station located near Halle, Germany from 200 MW to 400 MW. By acquiring PowerGen's interest in MIBRAG, an integrated energy business in eastern Germany consisting primarily of two lignite mines and three power stations, and following MIBRAG's buy back of the shares NRG Energy acquired from PowerGen, NRG Energy increased its ownership of MIBRAG from 33.3% to 50%. The Washington Group International, Inc., MIBRAG's other shareholder, owns the remaining 50% of MIBRAG.

INDECK

In August 2001, NRG Energy acquired an approximately 2,255 MW portfolio of operating projects and projects in advanced development, including projects that NRG Energy intends to develop, that are located in Illinois and upstate New York from Indeck Energy Services, Inc. Approximately 402 MW are currently in operation.

9

MCCLAIN

In August 2001, NRG Energy acquired Duke Energy's 77% interest in the approximately 520 MW natural gas-fired McClain Energy Generating facility located near Oklahoma City, Oklahoma. The Oklahoma Municipal Power Authority owns the remaining 23% interest. The McClain facility became operational in June 2001.

TERMORIO

In September 2001, NRG Energy acquired a 50% interest in TermoRio SA, a 1,040 MW gas-fired cogeneration facility currently under construction in Rio de Janeiro State, Brazil from Petroleos Brasileiros SA. Commercial operation is expected to begin in March 2004. NRG Energy has the option to put its interest in the project back to Petrobras after March 2002 if by that time certain milestones have not been met, including final agreement on the terms of all project documents.

MERIDEN

In December 2001, NRG Energy acquired a 540 MW natural gas fired generation facility being developed in Meriden, Connecticut. The plant has a planned commercial operation date of August 2003.

COMMONWEALTH ATLANTIC AND JAMES RIVER

In July 2001, NRG Energy signed agreements to acquire from Edison Mission Energy a 50% interest in the 375 MW Commonwealth Atlantic gas and oil-fired generating station located near Chesapeake, Virginia, and a 50% interest in the 110 MW James River coal-fired generating facility in Hopewell, Virginia. NRG Energy closed the acquisition of the Commonwealth Atlantic and James River generating facilities in January 2002.

OTHER PROJECTS

Edgar Filing: NRG ENERGY INC - Form 10-K405

During fiscal year 2001, NRG Energy also acquired interests in projects in Taiwan, India, Peru and the State of Nevada.

SIGNIFICANT EQUITY INVESTMENTS

The following are the more significant equity investments included in NRG Energy's Power Generation Segment.

MIBRAG

NRG Energy indirectly purchased a 33 1/3% interest in the equity of Mitteldeutsche Braunkohlengesellschaft mbH (MIBRAG) in 1994 for \$10.6 million. In April 2001, NRG Energy purchased from PowerGen its 33.3% interest in MIBRAG Bv for \$35.3 million which was repaid by the project company in June 2001. By acquiring PowerGen's interest in MIBRAG, and following MIBRAG's buy back of the shares, NRG Energy acquired from PowerGen, NRG Energy increased its ownership of MIBRAG from 33.3% to 50%. The Washington Group International, Inc., MIBRAG's other shareholder owns the remaining 50% of MIBRAG. MIBRAG owns coal mining, power generation and associated operations, all of which are located south of Leipzig, Germany. MIBRAG was formed by the German government following the reunification of East and West Germany to hold two open-cast brown coal (lignite) mining operations, a lease on an additional mine, three lignite-fired industrial cogeneration facilities and briquette manufacturing and coal dust plants, all located in the former East Germany. MIBRAG's cogeneration operations consist of the 115 MW Mumsdorf facility, the 86 MW Deuben facility and the 37 MW Wahlitz facility. These facilities provide power and thermal energy for MIBRAG's coal mining operations and its briquette manufacturing plants. All power not consumed by MIBRAG's internal operations is sold under an eight-year power purchase agreement with

10

ENVIA the regional energy provider. MIBRAG's lignite mine operations include Profen and Schleenhain with total estimated reserves of 776 million metric tons, which are expected to last for more than 40 years. A dispute has arisen as to coal transportation compensation payments to be made to MIBRAG pursuant to the acquisition agreement by Bundesanstalt für vereinigungsbedingte Sonderaufgaben (BvS), a German governmental entity that facilitated the privatization of MIBRAG. The size of the annual coal transportation compensation payments fluctuates based on the volume of coal transported to the Schkopau facility. The parties have reached a settlement, pending approval by the European Union. The settlement is not expected to have a material adverse impact on MIBRAG's operations.

GLADSTONE POWER STATION

The Gladstone facility is a 1,680 MW coal-fired power generation facility located in Gladstone, Australia. NRG Energy acquired a 37.5% ownership interest in the Gladstone facility for \$64.9 million when the facility was privatized in March 1994.

NRG Energy is responsible for the operation and maintenance of the Gladstone facility pursuant to a 17-year operation and maintenance agreement that commenced in 1994, which includes an annual bonus based on availability targets. The Gladstone facility sells electricity to the Enertrade, a government owned entity, and to Boyne Smelters Limited. Pursuant to an interconnection and power pooling agreement, Enertrade is obligated to accept all electricity generated by the facility, subject to merit order dispatch, for an initial term of 35 years.

Enertrade also entered into a 35-year capacity purchase agreement with each of the project's owners for such owner's percentage of the capacity of the

Edgar Filing: NRG ENERGY INC - Form 10-K405

Gladstone facility, excluding that sold directly to Boyne Smelters. Under the capacity purchase agreements, Enertrade pays the facility owners both a capacity and an energy charge. The capacity charge is designed to cover the projected fixed costs allocable to Enertrade, including debt service and an equity return, and is adjusted to reflect variations in interest rates.

The owners of Boyne Smelters have also entered into a power purchase agreement with each of the project's owners, providing for the sale and purchase of such owner's percentage share of capacity allocated to Boyne Smelters. The term of each of these power purchase agreements is 35 years. The owners of Boyne Smelters are obligated to pay to each of the project's owners a demand charge that is intended to cover the fixed costs of supplying capacity to Boyne Smelters, including debt service and return on equity. The owners of Boyne Smelters are also obligated to pay an energy charge based on the fuel cost associated with the production of energy from the Gladstone facility.

ENERGY CENTER KLDNO

The Energy Center Kladno project, located in Kladno, the Czech Republic consists of two phases. In 1994, NRG Energy acquired an interest in the existing coal-fired electricity and thermal energy facility that can supply 28 MW of electrical energy and 150 MW equivalent of steam and heated water. This facility historically supplied electrical and thermal energy to a nearby industrial complex and to a municipal heating company. The second phase was the expansion of the existing facility, which started commercial operation in January 2000, by the addition of 345 MW of new capacity, 271 MW of which is coal-fired and 74 MW of which is gas/oil-fired, facility acceptance was awarded in December 2001. The original project is owned by Energy Center Kladno, a Czech limited liability company in which NRG Energy owns a 44.5% interest. The expansion is held separately through ECK Generating, a Czech limited liability company in which NRG Energy owns a 44.5% interest.

COLLINSVILLE POWER STATION

The Collinsville Power Station is a 192 MW coal-fired power generation facility located in Collinsville, Australia. In March 1996, NRG Energy acquired a 50% ownership interest in the idled Collinsville facility for \$11.9 million when the Queensland State government privatized it. The Collinsville facility was recommis-

11

sioned and commenced operations on August 11, 1998. Transfield Holdings Pty Ltd, the project's other 50% owner, and NRG Energy have entered into an 18-year power purchase agreement with Enertrade under which Enertrade will pay both a capacity and an energy charge to the project's owners. The capacity charge is designed to cover the projected fixed costs allocable to Enertrade, including debt service and an equity return. The energy charge is based on the fuel costs associated with the production of energy from the facility.

ENERGY DEVELOPMENTS LTD

Energy Developments Limited, a publicly traded company listed on the Australian Stock Exchange, owns and operates approximately 357 MW of generation with 77% of that generation located in Australia. Between February 1997 and April 1998, NRG Energy acquired a total of 14,609,670 common shares and 16,800,000 convertible, non-voting preference shares of Energy Developments. NRG Energy paid a total of approximately AUD\$69.1 million (US\$44.5 million at the time of acquisition), or AUD\$2.20 (US\$1.42) per share, for the shares, which represented approximately 29.1% ownership interest in Energy Developments. Since the acquisition NRG Energy's holding has been diluted to 26.3%. NRG Energy has

Edgar Filing: NRG ENERGY INC - Form 10-K405

agreed to restrictions on its ability to purchase more shares or to dispose of any existing shares of Energy Developments. The preference shares do not become convertible into common shares unless a takeover bid is made for Energy Developments. In such event, if Energy Developments fails to comply with an obligation to appoint directors, NRG Energy is entitled to nominate under the terms of the agreement with Energy Developments. In either of those circumstances, the preference shares can be converted at the option of the owner to common shares on a share-for-share basis.

LOY YANG POWER

NRG Energy has a 25.4% interest in Loy Yang Power, which owns and operates the 2,000 MW Loy Yang A brown coal fired thermal power station and the adjacent Loy Yang coal mine located in Victoria, Australia. This interest was purchased for AUD \$340 million (approximately US \$264.3 million at the time of the acquisition) in 1997. The power station has four units, each with a 500 MW boiler and turbo generator, which commenced commercial operation between July 1984 and December 1988. In addition, Loy Yang manages the common infrastructure facilities that are located on the Loy Yang site, which service not only the Loy Yang A facility, but also non-NRG facilities such as the adjacent Loy Yang B 1,000 MW power station, a pulverized dried brown coal plant, and several other nearby power stations.

The wholesale electricity market in Australia is regulated under the National Electricity Law, which provides for a legally enforceable National Electricity Code, which defines the market rules. The code also makes provision for the establishment of the National Electricity Market Management Company to manage the power system, maintain system security and administer the spot market. Under the rules of the National Electricity Market, the Loy Yang facility is required to sell all of its output of electricity through the competitive wholesale market for electricity operated and administered by the National Electricity Market. In the National Electricity Market power pool system, it is not possible for a generator such as Loy Yang to enter into traditional power purchase agreements. In order to provide a hedge against pool price volatility, generators have entered into "contracts for differences" with distribution companies, electricity retailers, industrial customers and other generators. These contracts for differences are financial hedging instruments, which have the effect of fixing the price for a specified quantity of electricity for a particular seller and purchaser over a defined period.

Energy prices in the Victoria region of the National Electricity Market of Australia into which the Loy Yang facility sells its power have been significantly lower than NRG Energy expected when it acquired its interest in the facility. Prices improved during 2001 producing a 14% increase in revenue improvement over the prior year.

Despite this improvement, a significant unplanned outage, beginning in late December 2001 and expected to last until April 2002, will result in a reduction in 2002 revenues and cash flows, and may cause the Loy Yang project company to fail its required coverage ratios under its loan agreements during the next 12 months,

which would constitute an event of default. In the case of default, the project company's lenders would be allowed to accelerate the project company's indebtedness. The ultimate financial impact of the outage is subject to continuing investigation, and is also subject to several events including; the receipt and timing of insurance proceeds, the cost and timing of repairs to the damaged unit, the potential installation of a replacement unit while repairs are carried out to the original unit and electricity market conditions. Management

Edgar Filing: NRG ENERGY INC - Form 10-K405

is actively pursuing each of these options to mitigate the impact of the outage. However, in the event all factors are unfavorable, NRG Energy may be required to infuse equity or write-off all or a portion of its \$250 million investment in this project as a result of such acceleration.

In its current circumstances, Loy Yang Power is prohibited by its loan agreements from making equity distributions to the project owners.

In February 2000, CMS Energy announced its intention to divest its 49.6% ownership in the Loy Yang project but has established no deadline for completion of the sale. CMS Energy indicated that it intended to sell its interest because the project was no longer of strategic value to its portfolio and had not met its financial expectations. Under certain circumstances CMS will require the approval of Loy Yang Power's lenders and other parties to enable the sale to proceed. The impact (if any) of the proposed sale on NRG Energy's existing investment in Loy Yang Power is not known at the date of this report.

WEST COAST POWER

In May 1999, Dynegy and NRG Energy formed West Coast Power LLC (West Coast Power), 50% owned by affiliates of each sponsor. West Coast Power serves as the holding company for a portfolio of operating companies that own generating assets in Southern California. These assets are currently comprised of the El Segundo Generating Station, the Long Beach Generating Station, the Encina Generating Station and 17 Combustion Turbines in the San Diego area (the San Diego Combustion Turbines).

El Segundo Generating Station: The El Segundo Generating Station is a 1,020 MW plant consisting of four units: two units at 175 MW each and two units at 335 MW each. El Segundo was purchased from the Southern California Edison Company through a competitive bid process for \$88.3 million during April 1998.

Long Beach Generating Station: The Long Beach Generating Station is a 530 MW combined cycle plant with seven 56 MW gas turbine generators and, one 80 MW steam turbine unit and one 58 MW steam turbine unit. The Long Beach plant was purchased from Southern California Edison Company during April 1998 through a competitive bid process for \$29.9 million.

Encina Generating Station: The Encina Generating Station is located in Carlsbad, California and consists of five steam-electric generating units and one combustion turbine with net generating capacity of 965 MW. The Encina Generating Station was purchased from San Diego Gas & Electric during May 1999, at a purchase price of \$283.2 million.

San Diego Combustion Turbines: The San Diego Combustion Turbine assets consist of 17 combustion turbine generator sets (the CT's) with an aggregate capacity of 253 MW, located on seven different sites in San Diego County. During May 1999, Dynegy and NRG Energy purchased the CT's from San Diego Gas & Electric through a competitive bid process. The CT's acquisition had a purchase price of \$69.1 million. The CT's have the ability to provide spinning reserve, black start capability, quick start capability, voltage support and quick load capability for the ancillary services market.

In December 2000, NRG Energy and its partner submitted permit applications in respect of a planned repowering of the jointly-owned El Segundo station. The planned repowering will add approximately 621 MW of generating capacity to the facility at a cost of approximately \$368 million. Prior to the repowering, approximately 350 MW at the El Segundo Station will be decommissioned. The repowering project is expected to be permitted by the third quarter of 2003.

For additional information regarding the California utility liquidity crisis see Item 7 -- Management's Discussion and Analysis of Financial Condition

Edgar Filing: NRG ENERGY INC - Form 10-K405

and Results of Operations -- California Liquidity Crisis.

13

KONDAPALLI

During 2001, NRG Energy acquired a 30% interest in Lanco Kondapalli Power Private Limited and 100% of Eastern Generation Services (India) Private Limited for US \$27 million. Kondapalli is a 355 MW combined cycle power plant located in Andhra Pradesh, India. Eastern Generation Services is the plant operator.

Kondapalli earns revenue under a 15 year power purchase agreement with the state owned distributor and retailer Andhra Pradesh Transmission Corporation. The plant is natural gas fired and uses diesel/naptha as a backup fuel supply.

NRG Energy is responsible for the operation and maintenance of the Kondapalli facility via Eastern Generation Services. The Operations and Management Agreement is a cost plus contract that provides financial incentives to ensure the plant is operated efficiently.

SAGUARO POWER COMPANY

In September 2001, NRG Energy, acquired, for \$66 million, a 50% interest in Saguario Power Company, L.P. Other partners include Manga Energy Systems, Inc and Black Mountain Power Company, a wholly owned subsidiary of Boulder Power, LLC. The partnership owns a 105 MW natural gas fired cogeneration facility in Henderson, Nevada, a suburb of Las Vegas. Nevada Power Company is obligated to purchase 90 MW per hour of electric energy under a long-term power purchase agreement. The facility is also capable of generating 50 to 160 thousand pounds per hour of export steam. Under long-term steam purchase and sales agreements, a combined total of 50 thousand pounds per hour of high-pressure steam is committed to be sold to both Pioneer Chlor Alkali Company, Inc. and Ocean Spray Cranberries, Inc. Fuel gas requirements are provided to the facility under a long-term purchase agreement with Burlington.

SIGNIFICANT MAJORITY- AND WHOLLY-OWNED OPERATIONS

The following are the more significant majority- and wholly-owned operations included in NRG Energy's Independent Power Generation segment.

CROCKETT COGENERATION

Pacific Crockett Energy, Inc., an indirect, wholly owned subsidiary of NRG Energy, is the general partner of the Crockett Cogeneration Project (Crockett). Crockett, a 240 MW gas fired plant, began operations in May 1996. Pacific Generation Company, another wholly owned subsidiary of NRG Energy, owns a 56.67 percent limited partnership interest in Crockett through ENI Crockett LP (ENI Crockett). ENI Crockett is a limited partnership in which Pacific Generation Company is the general partner and El Paso Energy is a limited partner. The project sells 240 MW of capacity and energy to Pacific Gas & Electric Company under a modified Standard Offer No. 4 Purchase Power Agreement (PPA) extending to 2026. The PPA provides for a fixed capacity payment and a variable energy payment based on the market price of gas. In addition, Crockett provides up to 450,000 lbs/hr of steam to the adjacent C&H Sugar refinery under a steam sales agreement that expires in 2026. Natural gas is supplied to the project by BP Canada Energy Marketing. ESOCO operates the project under a renewable 15-year contract that provides for reimbursement of all costs within an approved budget, plus a fee and provision for a performance bonus. Other limited partners include Energy Investors Fund LP and Energy Investors Fund II, LP and a subsidiary of Tomen Power Corp. Crockett was originally financed with a \$260 million construction and term loan facility provided by a commercial bank syndicate led

Edgar Filing: NRG ENERGY INC - Form 10-K405

by ABN-AMRO. On December 15, 1999, Crockett was refinanced with a \$255 million term loan facility provided by a commercial bank syndicate led by ABN-AMRO, maturing in December 31, 2014.

14

NRG NORTHEAST GENERATING LLC

NRG Energy has acquired, through subsidiaries, in five separate transactions, certain generating assets from Niagara Mohawk Power Corporation (NIMO), Consolidated Edison Company of New York (ConEd), Montaup Electric Company (MEC), a wholly owned subsidiary of Eastern Utilities Association (EUA), and Connecticut Light & Power Company (CL&P) for a total cost of approximately \$1.5 billion. NRG Energy has aggregated these assets into a regional generating company, NRG Northeast Generating LLC (NRG Northeast) (collectively, the NRG Northeast assets).

The NRG Northeast assets represent competitive, low cost units with favorable market dynamics and locations close to major load centers in the NYPP and NEPOOL.

Huntley and Dunkirk: In June 1999, NRG Energy completed the acquisition of the Huntley and Dunkirk generating stations from NIMO for \$355 million. The two coal-fired power generation facilities are located near Buffalo, New York and have a combined capacity rating of 1,360 MW. In connection with this acquisition, NRG Energy entered into a 4-year agreement with NIMO that requires NRG Energy to provide to NIMO, pursuant to a predetermined schedule, fixed quantities of energy and capacity at a fixed price.

Oswego: In October 1999, NRG Energy completed the acquisition of the 1,700 MW oil and gas fired Oswego generating station for approximately \$85 million from NIMO and Rochester Gas and Electric Corporation.

Astoria Gas Turbines and Arthur Kill: In June 1999, NRG Energy completed the acquisition of the Astoria gas turbine facility and the Arthur Kill Generating Station from ConEd for \$505 million. These facilities, which are located in the New York City area, have a combined capacity rating of 1,456 MW.

Somerset: In April 1999, NRG Energy completed the acquisition of the Somerset power station for approximately \$55 million from MEC. The Somerset station includes two coal fired base-load generating facilities supplying a total of 181 MW and two aeroderivative combustion turbine peaking units supplying a total of 48 MW, including 69 MW on deactivated reserve. It is located on the west bank of the Taunton River in Somerset, Massachusetts and is interconnected with the NEPOOL market.

Connecticut stations: In December 1999, NRG Energy completed the acquisition of four fossil fuel electric generating stations and six remote gas turbines totaling 2,235 MW from CL&P for \$460 million, plus adjustments for working capital. The assets acquired from CL&P (CL&P Assets) are comprised of the Middletown, Montville, Devon and Norwalk Harbor gas- and oil-fired steam generating stations totaling 2,108 MW and 127 MW of remote gas turbines at Branford, Torrington and Cos Cob, Connecticut. NRG Energy also entered into a 4-year standard offer agreement that requires NRG Energy to provide to CL&P a portion of its load requirements through the year 2003 at a substantially fixed price.

Middletown station, an 856 MW gas- and oil-fired plant, is located in Middletown, Connecticut. The 498 MW Montville Station in Uncasville, Connecticut is composed of one gas- or oil-fired unit, one oil-fired unit and two diesel generators. Norwalk Station, with 353 MW of capacity from two oil-fired units

Edgar Filing: NRG ENERGY INC - Form 10-K405

and one gas turbine, is located on Manresa Island at the mouth of Norwalk Harbor. Devon Station, consisting of 401 MW of generation capacity derived from two gas- or oil-fired units and five gas turbines, is located at Milford, Connecticut.

NRG SOUTH CENTRAL GENERATING LLC

In March 2000, the South Central facilities were acquired in a competitive bidding process following a Chapter 11 bankruptcy filing by their former owner, Cajun Electric. NRG Energy paid approximately \$1,055.9 million for these facilities. NRG South Central Generating LLC, an indirect wholly-owned subsidiary of NRG Energy, Inc, through its wholly-owned subsidiaries, Louisiana Generating LLC (Louisiana Generating), NRG New Roads Holdings LLC, NRG Sterlington Power LLC, Big Cajun I Peaking Power LLC (Big Cajun I Peakers), NRG Sabine River Works GP LLC, NRG Sabine River Works LP LLC and NRG Bayou Cove LLC owns approximately 2,679 MW of net electric generating capacity as of December 31, 2001 (including projects under construction).

15

Through its subsidiaries, Louisiana Generating and Big Cajun I Peakers, NRG South Central owns the Big Cajun I and Big Cajun II generating facilities in New Roads, Louisiana (the Cajun facilities). The Cajun facilities consist of 100% ownership of four gas-fired intermediate/peaking power generation units which NRG Energy collectively refers to as Big Cajun I. Two of these units were completed and commenced commercial operation in May and June 2001. The Cajun facilities also include 100% interest of two coal-fired, base-load power generation units, and a 58% interest in a third coal-fired, base load unit, which NRG Energy refers to collectively as Big Cajun II. The Cajun facilities were acquired through a competitive bidding process following a Chapter 11 bankruptcy filing by Cajun Electric Power Cooperative, Inc., a non-profit Louisiana electric membership cooperative corporation. Cajun Electric sold wholesale energy and capacity generated by the Cajun facilities to its cooperative members for more than 20 years under long-term, all-requirements power supply agreements. NRG Energy sells most of the energy and capacity of the Cajun facilities to 11 of Cajun Electric's former power cooperative members. Seven of these cooperatives have entered into 25-year power purchase agreements with NRG Energy, and four have entered into two to four year power purchase agreements. In addition, NRG Energy sells power under contract to two municipal power authorities and one investor-owned utility that were former customers of Cajun Electric.

In March 2000, NRG South Central formed NRG New Roads Holdings LLC (New Roads) to hold certain assets that were acquired in conjunction with the purchase of the Cajun facilities but which are not necessary for the operation of the Cajun facilities. NRG Sterlington Power LLC (Sterlington), which was acquired by NRG Energy and contributed to NRG South Central in August 2000, was formed for the purpose of developing, constructing, owning and operating an approximately 202 MW simple cycle gas peaking facility in Sterlington, Louisiana. Louisiana Generating has a right of first refusal on any sale of capacity or energy by Sterlington. In December 2000, NRG Sabine River Works LP and NRG Sabine River Works GP acquired, respectively, a 49% limited partnership interest and a 1% general partnership interest in SRW Cogeneration Limited Partnership, that owns and operates an approximately 420 MW natural gas-fired cogeneration plant at the DuPont Company's Sabine River Works petrochemical facility near Orange, Texas. Subsidiaries of Conoco, Inc. own the other 50% interest in SRW Cogeneration Limited Partnership. Commercial operation of the plant commenced in November 2001.

KILLINGHOLME

Edgar Filing: NRG ENERGY INC - Form 10-K405

In March 2000, NRG Energy acquired the 680 MW gas-fired Killingholme combined cycle, baseload facility in North Lincolnshire, England from National Power plc. The purchase price was L390 million (approximately U.S. \$615.0 million at the time of acquisition), subject to post closing adjustments. NRG Energy financed the acquisition with a 19-year non-recourse credit facility that provides for L235 million (approximately U.S. \$374 million at the time of acquisition) for the costs of the acquisition and L90 million (approximately U.S. \$143 million at the time of acquisition) for letters of credit and working capital needs. NRG Energy sells power from the facility into the wholesale electricity market of England and Wales. The facility has a ten and one half year contract to purchase up to 70% of its natural gas requirements from a subsidiary of Centrica plc. From January 1, 2000 through the date of the acquisition, NRG Energy entered into a tolling agreement with National Power pursuant to which NRG Energy received revenues based on the prevailing market prices for electricity in exchange for payments to National Power based on the incremental operating costs of the facility.

Prices for power in the wholesale electricity market of England and Wales have decreased since the acquisition date due to new trading rules that are expected to come into effect and increase competition in this market. NRG Energy has entered into short-term agreements to sell a portion of the output of the Killingholme facility, and, in the future, NRG Energy intends to enter into similar short-term and long-term agreements that will provide a degree of stability to its revenues from the facility.

FLINDERS POWER

In September 2000, NRG Energy completed the acquisition of Flinders Power, South Australia's final generation company to be privatized. NRG Energy paid approximately AUD \$314.4 million (approximately

16

U.S. \$180 million at the date of acquisition) for a 100-year lease of certain Flinders Power assets, including two power stations totaling 760 MW. In addition, NRG Energy received a 20-year lease, renewable for additional 10-year terms, for the Leigh Creek coal mine and a dedicated rail line. The 100-year lease agreement also includes managing the long-term fuel supply and power purchase agreement of the 180 MW Osborne Cogeneration Station. Since that original acquisition, NRG Energy has also announced that it will undertake a refurbishment of its 240 MW Playford Power Station, being one of the two coal-fired plants that form the central part of the Flinders business.

GRANITE POWER PARTNERS

NRG Energy has acquired, in two separate transactions a 5,339 MW portfolio of operating projects and projects in construction and advanced development from LS Power, LLC and Cogentrix for a total cost of approximately \$830 million. Through 2005, NRG has the opportunity to acquire ownership interests in an additional 3,000 MW of generation projects developed and offered for sale by LS Power and its partners.

Batesville: NRG Energy, through subsidiaries acquired approximately 100% ownership of a natural gas-fired combined-cycle electric generating facility with a design capacity of approximately 837 megawatts located in Batesville, Mississippi. All of the electric power generation is sold under long-term tolling agreements with Virginia Electric and Power and Aquila. Additionally, a 292 MW expansion scheduled for operation in 2005 is currently in development.

Mustang: NRG Energy acquired a 25% ownership interest in an approximately 122 MW electric generating facility located in Texas. The facility sells its energy under a long-term power purchase agreement.

Edgar Filing: NRG ENERGY INC - Form 10-K405

Kendall: Scheduled to be commercially operable in the second quarter 2002, the Kendall facility located just south of Chicago, Illinois will generate approximately 1,168 MW of electric power utilizing combined cycle gas turbines. Tolling agreements with Dynegy and Minnesota Power are in place for 870 MW with the remaining generation available for merchant markets. Additionally, a 584 MW expansion scheduled for operation in 2006 is currently in development.

Pike: Construction began in February 2002 for a 1,168 MW natural gas fired facility located near McComb, Mississippi. This facility will use combined cycle gas turbines and is scheduled to be commercially operable in 2003.

Nelson: Scheduled to be commercially operable in 2003, the Nelson facility to be located just west of Chicago, Illinois will generate approximately 1,168 MW of electric power utilizing combined cycle gas turbines.

SCHKOPAU POWER STATION

In 1993, NRG Energy acquired for \$18.2 million an indirect 50% interest in a German limited liability company, Saale Energie GmbH, which then acquired a 41.9% participation interest in a 960 MW coal-fired power plant that was under construction in the East German city of Schkopau. The first 425 MW unit of the Schkopau plant began operation in January 1996, the 110 MW turbine in February 1996, and the second 425 MW unit in July 1996. The coal is provided under a long-term contract by MIBRAG's Profen lignite mine.

Saale Energie sells its allocated 400 MW portion of the plant's capacity under a 25-year contract with VEAG, a major German utility that controls the high-voltage transmission of electricity in the former East Germany. VEAG pays a price that is made up of three components, the first of which is designed to recover installation and capital costs, the second to recover operating and other variable costs, and the third to cover fuel supply and transportation costs. In April 2001, NRG Energy acquired the remaining 50% of Saale Energie GmbH for \$37.3 million which effectively increased NRG Energy's participation interest in Schkopau to 41.9% totaling 400 MW.

17

COBEE

In December 1996, NRG Energy acquired for \$81.8 million a 49.1% interest in COBEE, the second largest generator of electricity in Bolivia. In June 2001, NRG Energy increased its interest in COBEE as part of a large portfolio acquisition of assets. COBEE has entered into contracts, which expire in 2008, with two Bolivian distribution companies pursuant to which COBEE supplies electricity. All payments under these contracts are made in United States dollars.

COBEE operates its electric generation business under a 40-year concession granted by the Bolivian government in 1990. Under this concession, COBEE is entitled to earn a return of 9.0% on assets within its rate base. The Bolivian Electricity Code also provides for the adjustment of rates to compensate COBEE for any shortfall or to recapture any excess in COBEE's actual rate of return during the previous year. COBEE periodically applies to the Superintendent of Electricity for rate increases sufficient to provide its 9.0% rate of return based on COBEE's current operating results and its projection of future revenues and expenses. Under COBEE's concession, COBEE's assets are required to be removed from the rate base in 2008.

CSEPEL

The Csepel facility is a 389 MW gas-fired power plant and a 116 MW thermal

Edgar Filing: NRG ENERGY INC - Form 10-K405

power plant, both of which are located on Csepel Island in Budapest, Hungary. In June 2001, NRG Energy acquired a 100% interest in the Csepel project for \$111.4 million. The Csepel facility was the first new independent power station in Hungary. Csepel commenced operations in November 2000.

The Csepel facility has a signed 20-year purchase power agreement with MVM, the Hungarian state owned utility. At commercial operation the purchase power agreement was replaced with an annual administrative price set by the Hungarian Energy office and approved by the Economic Ministry. Since commercial operation, the administrative price followed in line with the purchase power agreement pricing. In addition, the fuel is supplied to Csepel through a 20-year "back to back" gas supply agreement.

MIDATLANTIC

In June 2001 NRG Energy acquired 1,081 MW of baseload electric generating plants from Delmarva Power and Light, a subsidiary of Wilmington, Delaware-based Conectiv. As part of the agreement, NRG entered into both short- and long-term purchase power contracts with Delmarva Power to provide energy and capacity for the Delmarva Peninsula. Under the long-term agreement, Conectiv is obligated to purchase 500 MW through 2005 at contracted prices.

The 784 MW coal-fired Indian River Generating Station is located on the Delmarva Peninsula near Millsboro, Delaware. The Vienna Generating Station is a 170 MW oil-fired generating station located along the Nanticoke River in the town of Vienna, Maryland. Of the 1,711 MW coal-fired Conemaugh Generating Station, NRG acquired 64 MW. The plant is located on the Conemaugh River, approximately 60 miles east of Pittsburgh, Pennsylvania. NRG Energy also acquired 63 MW of the 1,711 MW coal-fired Keystone Generating Station, located approximately 50 miles east of Pittsburgh, Pennsylvania.

INDECK

In August 2001, NRG Energy acquired a 2,255 MW project portfolio from Indeck Energy Services, Inc. The portfolio primarily serves the Chicago, Illinois energy market.

NRG Energy acquired full ownership in five projects in operation, construction and advanced development. The portfolio includes combined-cycle and peaking power plants that employ natural gas-fueled combustion technology. Operational facilities include the Rockford I and Ilion Energy Centers. Projects under construction and development include the Rockford II Energy Center, Bourbonnais I and II Energy Centers.

Rockford I is a 342 MW simple cycle power generation plant designed to produce peaking electricity located in Rockford, Illinois. Power is contracted to ComEd under a long-term power sales agreement. Under

18

the agreement, ComEd delivers natural gas and the facility generates electricity to ComEd that amounts to a tolling arrangement. Ilion, located in central upstate New York, is a 60 MW combined cycle cogeneration plant. Ilion operates as a merchant power plant while selling its steam to Remington Arms Company. The Rockford II project is scheduled for commercial operation in 2002 while the Bourbonnais projects are planned for 2004 and 2005.

HSIN YU ENERGY DEVELOPMENT CO. LIMITED

During 2001, NRG Energy acquired approximately 60% ownership in Hsin Yu Energy Development Co. LTD for NT \$1.6 billion (approximately \$46.7 million at the date of acquisition). Hsin Yu is a Taiwan company that owns a 170 MW

Edgar Filing: NRG ENERGY INC - Form 10-K405

cogeneration facility located near Taipei. Hsin Yu is developing a 245 MW expansion of the facility and has rights to develop a 490 MW Greenfield project near Tainan. Hsin Yu sells power to industrial customer under short-term power purchase agreements and sells residual power to Tai Power. Hsin Yu secures gas supply through a 12-year contract with China Petroleum Corp. the state owned gas supplier.

SIGNIFICANT PENDING ACQUISITIONS AND PROJECTS UNDER DEVELOPMENT

Due to the many complexities inherent in the acquisition, development and financing of projects, there can be no assurance that any of NRG Energy's pending acquisitions and projects under development, including those described below, will be consummated.

FIRSTENERGY

In November 2001, NRG Energy signed purchase agreements to acquire or lease four coal-fired generating facilities totaling approximately 2,535 MW and two ash disposal sites from subsidiaries of FirstEnergy Corporation. The four generating facilities are located in Ohio, along the shore of Lake Erie, and the approximately 376 MW Ashtabula facility in Ashtabula, Ohio, the approximately 249 MW Lake Shore facility in downtown Cleveland, the approximately 1,262 MW Eastlake facility near Cleveland and the approximately 648 MW Bay Shore facility near Toledo. NRG Energy is also acquiring all of the equity interests in Bay Shore Power Company, which is a subsidiary of FirstEnergy and the owner of a 136 MW petroleum coke-fired steam generating project on the Bay Shore facility site. The acquisition is expected to close in the second quarter of 2002. In connection with the acquisition of these facilities, NRG Energy also entered into a Transition Power Purchase Agreement with FirstEnergy, pursuant to which NRG Energy will supply to FirstEnergy approximately 95% of the output from the facilities through 2005.

CONECTIV ASSETS

In June and October 2001, NRG Energy extended purchase agreements that NRG Energy entered into with a subsidiary of Conectiv in January 2000 to acquire 794 MW of coal and oil-fired electric generating capacity and other assets in New Jersey and Pennsylvania, including an additional 66 MW of Conemaugh Generating Station and an additional 42 MW of the Keystone Generating Station. By their terms these purchase agreements became terminable by either party after February 28, 2002, and on April 1, 2002 NRG Energy exercised its right to terminate the agreements.

REGULATION

NRG Energy is subject to a broad range of federal, state and local energy and environmental laws and regulations applicable to the development, ownership and operation of its United States and international projects. These laws and regulations generally require that permits and approvals be obtained before siting a power plant, during the plants construction, and after it becomes fully operational. Throughout each phase of the project's implementation, all operations must be conducted in compliance with the terms specified in such permits and approvals.

NRG Energy strives to comply with the terms of all applicable laws, regulations, permits and licenses and believes that all of its ongoing operations are in material compliance with all such requirements. Even so, due to the promulgation of increasingly stringent regulatory requirements and/or local opposition to its projects, NRG Energy cannot presently assure its ability

Edgar Filing: NRG ENERGY INC - Form 10-K405

to obtain all future permits and approvals nor guarantee 100% regulatory compliance. In order to approach such levels of regulatory certainty, prohibitive expenditures could force projects to be abandoned, create the risk of expensive delays or materially impair project values.

In particular, the competitive power markets in the United States, United Kingdom, Australia and other countries are dependent on the existing regulatory structure, and while NRG Energy strives to take advantage of the opportunities created by regulatory changes, it is impossible to predict the impact of regulatory changes on its operations. The level of environmental awareness and enforcement is growing in most countries, including most of the countries in which NRG Energy intends to develop and operate new projects. Accompanying such awareness is the requirement to achieve stringent emission limitations. NRG Energy believes that the nature and level of environmental regulation to which it is subject will become more stringent. Therefore, NRG Energy's policy is to integrate the consideration of potential environmental impacts into every decision it makes, and by doing so strive to improve its competitive advantage by meeting or exceeding environmental requirements pertaining to the management and operation of its assets.

COMPETITION

The independent power industry is characterized by numerous strong and capable competitors, some of which may have more extensive operating experience, more extensive experience in the acquisition and development of power generation facilities, larger staffs or greater financial resources than NRG Energy does. In recent years, the independent power industry has been characterized by increased competition for asset purchases and development opportunities. In recent months there have been announcements from several of NRG Energy's competitors that they will be scaling back their growth plans and delaying construction expenditures.

In addition, regulatory changes have also been proposed to increase access to transmission grids by utility and non-utility purchasers and sellers of electricity. Industry deregulation may encourage the disaggregation of vertically integrated utilities into separate generation, transmission and distribution businesses.

The United States electric utility industry is currently experiencing increasing competitive pressures, primarily in wholesale markets, as a result of consumer demands, technological advances, greater availability of natural gas-fired generation that is more efficient than NRG Energy's generation facilities and other factors. The Federal Energy Regulatory Commission (FERC) has implemented and continues to propose regulatory changes to increase access to the nationwide transmission grid by utility and non-utility purchasers and sellers of electricity.

Proposals have been introduced in Congress to repeal PURPA and PUHCA, and FERC has publicly indicated support for the PUHCA repeal effort. If the repeal of PURPA or PUHCA occurs, either separately or as part of legislation designed to encourage the broader introduction of wholesale and retail competition, the significant competitive advantages that independent power producers currently enjoy over certain regulated utility companies would be eliminated or sharply curtailed, and the ability of regulated utility companies to compete more directly with independent power companies would be increased. To the extent competitive pressures increase and the pricing and sale of electricity assumes more characteristics of a commodity business, the economics of domestic independent power generation projects may come under increasing pressure. Deregulation may not only continue to fuel the current trend toward consolidation among domestic utilities, but may also encourage the disaggregation of vertically-integrated utilities into separate generation, transmission and distribution businesses.

In addition, the independent system operators who oversee most of the wholesale power markets have in the past imposed, and may in the future continue to impose, price limitations and other mechanisms to address some of the volatility in these markets. For example, the independent system operator for the New York power Pool and the California independent system operator have recently imposed price limitations. These types of price limitations and other mechanisms in New York, California, the New England Power Pool and elsewhere may adversely impact the profitability of NRG Energy's generation facilities that sell energy into the

20

wholesale power markets. Finally, the regulatory and legislative changes that have recently been enacted in a number of states in an effort to promote competition are novel and untested in many respects. These new approaches to the sale of electric power have very short operating histories, and it is not yet clear how they will operate in times of market stress or pressure, given the extreme volatility and lack of meaningful long-term price history in many of these markets and the imposition of price limitations by independent system operators.

EMPLOYEES

At December 31, 2001, NRG Energy had 3,888 employees, approximately 496 of whom are employed directly by NRG Energy and approximately 3,392 of whom are employed by its wholly owned subsidiaries and affiliates. Approximately 1,825 employees are covered by bargaining agreements. NRG Energy has experienced no significant labor stoppages or labor disputes at its facilities.

CAUTIONARY STATEMENT REGARDING FORWARD LOOKING INFORMATION

The information presented in this annual report includes forward-looking statements in addition to historical information. These Statements involve known and unknown risks and relate to future events, or projected business results. In some cases forward-looking statements may be identified by their use of such words as "may," "expects," "plans," "anticipates," "believes," and similar terms. Forward-looking statements are only predictions, and actual results may differ materially from the expectations expressed in any forward-looking statement. While NRG Energy believes that the expectations expressed in such forward-looking statements are reasonable, we can give no assurances that these expectations will prove to have been correct. In addition to any assumptions and other factors referred to specifically in connection with such forward-looking statements, factors that could cause actual results to differ materially from those contemplated in any forward-looking statements include, among others, the following:

- General economic conditions including inflation rates and monetary or currency exchange rate fluctuations; the risk of a significant slowdown in growth in the U.S. economy or risk of delay in growth recovery in the U.S. as a consequence of the September 11, 2001 terrorist attacks and other factors;
- Trade, monetary, fiscal, taxation, and environmental policies of governments, agencies and similar organizations in geographic areas where NRG Energy has a financial interest;
- Customer business conditions including demand for their products or services and supply of labor and materials used in creating their products and services;
- Financial or regulatory accounting principles or policies imposed by the

Edgar Filing: NRG ENERGY INC - Form 10-K405

Financial Accounting Standards Board, the Securities and Exchange Commission, the Federal Energy Regulatory Commission and similar entities with regulatory oversight;

- Factors affecting the availability or cost of capital such as changes in interest rates; market perceptions of the power generation industry, the Company or any of its subsidiaries; or credit ratings;
- Factors affecting power generation operations such as unusual weather conditions; catastrophic weather-related damage; unscheduled generation outages, maintenance or repairs; unanticipated changes to fossil fuel, or gas supply costs or availability due to higher demand, shortages, transportation problems or other developments; environmental incidents; or electric transmission or gas pipeline system constraints;
- Employee workforce factors including loss or retirement of key executives, collective bargaining agreements with union employees, or work stoppages;
- Volatility of energy prices in a deregulated market environment;
- Increased competition in the power generation industry;
- Cost and other effects of legal and administrative proceedings, settlements, investigations and claims;

21

- Technological developments that result in competitive disadvantages and create the potential for impairment of existing assets;
- The completion of the Xcel Energy exchange offer transaction and the business plan Xcel Energy puts in place following such completion;
- Factors associated with various investments including conditions of final legal closing, partnership actions, competition, operating risks, dependence on certain suppliers and customers, domestic and foreign environmental and energy regulations;
- Limitations on NRG Energy's ability to control the development or operation of projects in which the Company has less than 100% interest;
- The lack of operating history at development projects, the lack of NRG Energy's operating history at the projects not yet owned and the limited operating history at the remaining projects provide only a limited basis for management to project the results of future operations;
- Risks associated with timely completion of projects under construction, including obtaining competitive contracts, obtaining regulatory and permitting approvals, local opposition, construction delays and other factors beyond NRG Energy's control;
- The failure to timely satisfy the closing conditions contained in the definitive agreements for the acquisitions of projects subject to definitive agreements but not yet closed, many of which are beyond NRG Energy's control;
- Factors challenging the successful integration of projects not previously owned or operated by NRG Energy, including the ability to obtain operating synergies;

Edgar Filing: NRG ENERGY INC - Form 10-K405

- Factors associated with operating in foreign countries including: delays in permitting and licensing, construction delays and interruption of business, political instability, risk of war, expropriation, nationalization, renegotiation, or nullification of existing contracts, changes in law, and the ability to convert foreign currency into United States dollars;
- Changes in government regulation or the implementation of government regulations, including pending changes within or outside of California as a result of the California energy crisis, which could result in NRG Energy's failure to obtain regulatory approvals required to close project acquisitions, and which could adversely affect the continued deregulation of the electric industry;
- Other business or investment considerations that may be disclosed from time to time in NRG Energy's Securities and Exchange Commission filings or in other publicly disseminated written documents, including NRG Energy's Registration Statement No. 333-62958, as amended, and all supplements therein.

NRG Energy undertakes no obligation or publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise. The foregoing review of factors that could cause our actual results to differ materially from those contemplated in any forward-looking statements included in this annual report should not be construed as exhaustive.

ITEM 2 -- PROPERTIES

Listed below are descriptions of NRG Energy's interests in facilities, operations and/or projects under construction as of December 31, 2001.

(1) Thermal production and transmission capacity is based on 1,000 Btus per pound of steam production or transmission capacity. The unit mmBtu is equal to one million Btus.

(2) Kladno also is included in the Independent Power Production and Cogeneration Facilities table on the preceding page, under the name ECK Generating.

OTHER PROPERTIES

In addition to the above, NRG Energy leases its corporate offices at 901 Marquette, Suite 2300, Minneapolis, Minnesota 55402 and various other office spaces.

25

ITEM 3 -- LEGAL PROCEEDINGS

FORTISTAR CAPITAL V. NRG ENERGY

In July 1999, Fortistar Capital Inc., a Delaware corporation, filed a complaint in District Court (Fourth Judicial District, Hennepin County) in Minnesota against NRG Energy asserting claims for injunctive relief and for damages as a result of NRG Energy's alleged breach of a confidentiality letter agreement with Fortistar relating to the Oswego facility in New York. NRG Energy disputed Fortistar's allegations and asserted numerous counterclaims, and in October 1999, NRG Energy, through a wholly-owned subsidiary, closed on the acquisition of the Oswego facility. In April and December 2000, NRG Energy filed summary judgment motions to dispose of the litigation. A hearing on these

Edgar Filing: NRG ENERGY INC - Form 10-K405

motions was held in February 2001 and certain of Fortistar's claims were dismissed. NRG Energy intends to continue to vigorously defend the suit and believes Fortistar's claims to be without merit. A trial date of May 13, 2002 has been set in respect of the remaining claims.

NEW YORK ENVIRONMENTAL LITIGATION

In January 2002 the New York Attorney General and the New York Department of Environmental Control (NYDEC) filed suit in the western district of New York against NRG Energy and Niagara Mohawk Power Corporation (Niagara Mohawk), the prior owner of the Huntley and Dunkirk facilities in New York. The lawsuit relates to physical changes made at those facilities prior to NRG Energy's assumption of ownership. The complaint alleges that these changes represent major modifications undertaken without the required permits having been obtained. Although NRG Energy has a right to indemnification by the previous owner for fines, penalties, assessments and related losses resulting from the previous owner's failure to comply with environmental laws and regulations, NRG Energy could be enjoined from operating the facilities if the facilities are found not to comply with applicable permit requirements.

In July 2001, Niagara Mohawk Power Corporation filed a declaratory judgment action in the Supreme Court for the State of New York, County of Onondaga, against NRG Energy and its wholly-owned subsidiaries, Huntley Power LLC and Dunkirk Power LLC. Niagara Mohawk requests a declaration by the Court that, pursuant to the terms of the Assets Sales Agreement under which NRG Energy purchased the Huntley and Dunkirk generating facilities from Niagara Mohawk (the ASA), defendants have assumed liability for any costs for the installation of emissions controls or other modifications to or related to the Huntley or Dunkirk plants imposed as a result of violations or alleged violations of environmental law. Niagara Mohawk also requests a declaration by the Court that, pursuant to the ASA, defendants have assumed all liabilities, including liabilities for natural resource damages, arising from emissions or releases of pollutants from the Huntley and Dunkirk plants, without regard to whether such emissions or releases occurred before, on or after the closing date for the purchase of the Huntley and Dunkirk plants. NRG Energy has counterclaimed against Niagara Mohawk, and the parties have exchanged discovery requests.

NYDEC OPACITY NOTICE OF VIOLATION

NRG Energy became part of an opacity consent order as a result of acquiring its Huntley, Dunkirk and Oswego plants from Niagara Mohawk. At the time of financial close on these assets, a consent order was being negotiated between Niagara Mohawk and the NYDEC; it required Niagara Mohawk to pay a stipulated penalty for each opacity event at these facilities. On January 14, 2002, the NYDEC issued NRG Energy Notices of Violations (NOV) for opacity events which had occurred since the time NRG Energy assumed ownership of the Huntley, Dunkirk and Oswego generating stations. The NOVs allege that a total of 7,231 events had occurred where the average opacity during a six minute block of time had exceeded 20%. The NYDEC set the penalty associated with the NOVs at \$900,000.

CALIFORNIA LITIGATION

NRG Energy and other power generators and power traders have been named as defendants in certain private plaintiff class actions filed in the Superior Court of the State of California for the County of San Diego in San Diego, California in November 2000 (Pamela R. Gordon v. Reliant Energy, Inc., et al. and Ruth Hendricks

v. Dynegy Power Marketing Inc., et al). NRG Energy has also been named in

Edgar Filing: NRG ENERGY INC - Form 10-K405

another suit filed in January 2001 in San Diego County and brought by three California water districts, as consumers of electricity (Sweetwater Authority v. Dynegy, Inc., et al.), and in two suits filed in San Francisco County, one brought by the San Francisco City Attorney on behalf of the people of the State of California (The People of the State of California v. Dynegy Power Marketing, Inc., et al.) and one brought by Pier 23 Restaurant as a class action (Pier 23 Restaurant v. PG&E Energy Trading, et al.). Certain NRG Energy affiliates in NRG Energy's West Coast power partnership with Dynegy (Cabrillo I and II, Long Beach Generation and El Segundo Power) have been named as defendants in a state court action in Los Angeles County (Bustamonte v. Dynegy, Inc., et al.).

Although the complaints contain a number of allegations, the basic claim is that, by underbidding forward contracts and exporting electricity to surrounding markets, the defendants, acting in collusion, were able to drive up wholesale prices on the Real Time and Replacement Reserve markets, through the Western Coordinating Council and otherwise. The complaints allege that the conduct violated California antitrust and unfair competition laws. NRG Energy does not believe that it has engaged in any illegal activities, and intends to vigorously defend these lawsuits. These six civil actions brought against NRG Energy and other power generators and power traders in California have been consolidated and assigned to the presiding judge of the San Diego County Superior Court, and a pre-trial conference has been scheduled for March 2002. The plaintiffs in these six consolidated civil actions have filed a master amended complaint with the Superior Court of the State of California, County of San Diego. The plaintiffs reiterate the allegations contained in their complaints and allege that defendants' anti-competitive conduct damaged the general public and class members in an amount in excess of \$1.0 billion.

On March 20, 2002 the Attorney General of California filed at the Federal Energy Regulatory Commission a complaint against specific named generators and marketers (including Dynegy Power Marketing, Inc., which serves as the scheduling coordinator for certain NRG affiliates) and against "all other public utility sellers of energy and ancillary services into markets operated by the California Power Exchange and California Independent System Operator." The complaint alleges that defendants have violated FERC's grant of market-based rate authority by failing to file their rates, as required by Section 205(c) of the Federal Power Act and numerous FERC orders requiring the filing of transaction-specific information about defendants' sales and purchases at market-based rates. The plaintiff seeks injunctive relief to compel defendants' prospective compliance with Section 205 of the Federal Power Act, as well as refunds on behalf of California purchasers to the extent prior transactions are found to exceed just and reasonable price levels.

On March 27, 2002, the Attorney General of California requested that Xcel, Inc., NRG Energy, Inc., Dynegy, Inc., Dynegy Power Marketing, Inc., and certain NRG affiliates agree to toll the statute of limitations for a threatened action under the Clayton Antitrust Act. The Attorney General has neither provided a draft complaint nor served an actual complaint, but the Company expects to see a draft complaint within the next several weeks.

SHAREHOLDER LITIGATION

On February 15, 2002, Xcel Energy announced its intention to commence an exchange offer to acquire all of the outstanding publicly held shares of NRG Energy. Following this announcement, nine separate but similar civil actions were filed in the Court of Chancery of the State of Delaware in and for New Castle County by owners of NRG Energy common stock, against Xcel Energy, NRG Energy and NRG Energy's directors. The complaints contain a number of allegations, but the basic claim is that Xcel proposes to acquire the remaining ownership of NRG Energy for inadequate consideration and without full and complete disclosure of all material information, in breach of defendants' fiduciary duties. The complaints request the court to enjoin the proposed

Edgar Filing: NRG ENERGY INC - Form 10-K405

transaction and, in the event the exchange offer is consummated, to award damages to plaintiffs. An NRG Energy stockholder has also filed a class action complaint challenging the transaction in a Minnesota state court against Xcel Energy, NRG Energy, and seven of the nine NRG Energy directors, alleging essentially the same charges.

27

ANCILLARY SERVICES

On March 11, 2002, the Attorney General of California filed a civil complaint against NRG Energy, certain NRG Energy affiliates, Xcel Energy, Dynegy, Inc. and Dynegy Power Marketing, Inc., alleging antitrust violations in the ancillary services market. The complaint alleges that defendants repeatedly sold electricity generating capacity to the California ISO for use as a reserve and subsequently, and impermissibly, sold the same capacity into the "spot" market for wholesale power, unlawfully collecting millions of dollars. Similar complaints were filed against other power generators. The plaintiff seeks an injunction against further similar acts by the defendants, and also seeks restitution, disgorgement of all proceeds, including profits, gained from these sales, and certain civil penalties.

There are no other material legal proceedings pending to which NRG Energy is a party. There are no material legal proceedings to which an officer or director is a party or has a material interest adverse to NRG Energy or its subsidiaries. There are no other material administrative or judicial proceedings arising under environmental quality or civil rights statutes pending or known to be contemplated by governmental agencies to which NRG Energy is or would be a party.

ITEM 4 -- SUBMISSION OF MATTERS TO A VOTE OF SECURITY HOLDERS

No matters were considered during the fourth quarter of 2001.

PART II

ITEM 5 -- MARKET PRICE FOR THE REGISTRANT'S COMMON EQUITY AND RELATED STOCKHOLDER MATTERS

QUARTERLY STOCK DATA

NRG Energy's common stock is traded principally on the New York Stock Exchange (the Exchange). The common stock was first traded on the Exchange on May 31, 2000, concurrent with the underwritten initial public offering of shares of NRG Energy's common stock at an initial price to the public of \$15.00 per share. The following table reflects the range of high and low selling prices of NRG Energy's common stock by quarter from May 31, 2000 through December 31, 2001. This information is based on selling prices as reported by the New York Stock Exchange.

	2001		2000	
	HIGH	LOW	HIGH	LOW
First Quarter.....	\$36.40	\$22.19	N.A.	N.A.
Second Quarter.....	\$35.75	\$21.38	\$18.15	\$16.25
Third Quarter.....	\$25.30	\$13.72	\$36.50	\$18.15
Fourth Quarter.....	\$20.47	\$12.24	\$36.50	\$22.50

Edgar Filing: NRG ENERGY INC - Form 10-K405

N.A. -- Not available -- stock not publicly traded

HOLDERS

At March 6, 2002, there were approximately 278 holders of record of common stock and 1 holder of Class A common stock.

28

DIVIDENDS ON COMMON STOCK

NRG Energy has not paid and does not currently intend to distribute any earnings as dividends.

ITEM 6 -- SELECTED FINANCIAL DATA

The following table presents selected financial data of NRG Energy. This historical data should be read in conjunction with the Consolidated Financial Statements and the related notes thereto in Item 8 and "Management's Discussion and Analysis of Financial Condition and Results of Operations" in Item 7.

	YEAR ENDED DECEMBER 31,

29

ITEM 7 -- MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

FOR THE YEAR ENDED DECEMBER 31, 2001 COMPARED TO THE YEAR ENDED DECEMBER 31, 2000

EARNINGS PER SHARE

Edgar Filing: NRG ENERGY INC - Form 10-K405

Earnings per share on a fully diluted basis for 2001 were \$1.35, compared to \$1.10 for 2000, an increase of \$0.25 or approximately 22.7%. During the year 2001, earnings per share were adversely affected through additional dilution resulting from the issuance of 18.4 million shares of common stock in March 2001 and through the issuance and exercise of stock options throughout the year, as compared to 2000.

NET INCOME

Net income for 2001 was \$265.2 million, compared to \$182.9 million for 2000, an increase of \$82.3 million or approximately 45.0%. Net income for 2001 increased by \$82.3 million due to the factors described below.

REVENUES AND EQUITY IN EARNINGS OF UNCONSOLIDATED AFFILIATES

For the year ended December 31, 2001, NRG Energy had total revenues and equity earnings of \$3.0 billion, compared to \$2.2 billion for 2000, an increase of \$850.7 million or approximately 39.4%.

REVENUES FROM MAJORITY-OWNED OPERATIONS

NRG Energy's operating revenues from majority-owned operations were \$2.8 billion compared to \$2.0 billion, an increase of \$780 million or approximately 38.6%. Revenues from majority-owned operations for the year ended December 31, 2001, consisted primarily of power generation revenues from domestic operations of approximately \$1.8 billion, operations in Europe of \$490.9 million, Asia-Pacific \$239.1 million and Other Americas \$34.7 million, resulting in increases of \$256.5 million, \$293.2 million, \$144.4 million and \$34.4 million compared to 2000, respectively. In addition, NRG Energy recognized revenues from majority-owned operations from its alternative energy, thermal and other operations of approximately \$79.5 million, \$108.3 million and \$10.9 million respectively, resulting in increases of \$37.9 million, \$20.5 million and a decrease of \$6.9 million compared to 2000, respectively.

The increase of \$256.5 million related to NRG Energy's domestic power generation operations is due primarily to additional sales at NRG Energy's Mid Atlantic region facilities which were acquired in June 2001 from Conectiv and increased sales at NRG Energy's South Central region facilities which were primarily acquired in March 2000 from Cajun Electric and expanded with the acquisition of the Batesville facility from LS Power in January 2001 and completion of the Sterlington and Big Cajun 1 peaking facilities in 2001.

The increase of \$293.2 million related to NRG Energy's Europe power generation operations is due primarily to operations at Entrade, the Csepel facility in Hungary and Saale Energia in Germany (SEG). Entrade was acquired in November 2000, Csepel was acquired in June 2001 and SEG through an increase in ownership became consolidated in March 2001.

The increase of \$144.4 million related to NRG Energy's Asia-Pacific's power generation operations is due primarily to a full year of operations at the Flinders Power facilities which was acquired in August 2000 and to a lesser degree the addition of the Hsin Yu Development Company facilities in July 2001.

The increase of \$34.4 million related to NRG Energy's Other America's power generation operations is due primarily to the consolidation in 2001 of the COBEE and Bulo Bulu facilities which were previously accounted for under the equity method.

EQUITY IN EARNINGS OF UNCONSOLIDATED AFFILIATES

For the year ended December 31, 2001, NRG Energy had equity in earnings of

Edgar Filing: NRG ENERGY INC - Form 10-K405

unconsolidated affiliates of \$210.0 million, compared to \$139.4 million for 2000, an increase of \$70.6 million or approximately 50.7%. The increase of \$70.6 million is primarily comprised of favorable results from NRG Energy's domestic and

30

international power generation equity investments. During 2001, NRG Energy's domestic power generation investment in West Coast Power contributed \$41.0 million of this increase. NRG Energy's international power generation investments in MIBRAG, Loy Yang and Kladno (ECKG) also favorably contributed to equity in earnings for 2001 in comparison to 2000. MIBRAG favorably contributed \$13.3 million, Loy Yang favorably contributed \$11.7 million due to improved market prices in Australia, Kladno contributed \$6.6 million, Enfield contributed \$7.4 million and Kondapalli contributed \$3.8 million. These increases were partially offset by unfavorable results at NRG Energy's other investments accounted for under the equity method and continued reductions in the equity earnings attributable to NEO Corporation. NEO Corporation derives a significant portion of its net income from Section 29 tax credits.

OPERATING COSTS AND EXPENSES

For the year ended December 31, 2001, cost of majority-owned operations was \$1.9 billion compared to \$1.3 billion for 2000, an increase of \$566.2 million or approximately 43.9%. For the years ended December 31, 2001 and 2000, cost of majority-owned operations represented approximately 66.3% and 63.9% of revenues from majority-owned operations, respectively. Cost of majority-owned operations consists primarily of cost of energy (primarily fuel costs), labor, operating and maintenance costs and non-income based taxes related to NRG Energy's majority-owned operations.

Approximately 89% of the increase in operating costs and expenses for 2001 compared to 2000 of \$566.2 million is primarily due to increased cost of energy incurred at NRG Energy's generating facilities.

The majority of the growth in cost of majority owned operations was due to NRG Energy's recent international acquisitions. In the third and fourth quarters of 2000, NRG Energy completed the Flinders and Entrade acquisitions, during the second quarter of 2001, NRG Energy increased its ownership in the Schkopau, Cobee and Bulu Bulu projects as well as acquired the Csepel facility in Hungary. During the third quarter NRG Energy acquired a 60% interest in the Hsin Yu Energy Development Company. These recent acquisitions accounted for approximately \$370.7 million of the increase in the cost of majority-owned operations the remaining increase is due primarily to increased operating costs at the South Central region generating facilities, the recently acquired Mid-Atlantic generating facilities and costs incurred by NRG Energy's power marketing operations.

DEPRECIATION AND AMORTIZATION

For the year ended December 31, 2001, depreciation and amortization was \$212.5 million, compared to \$122.9 million for the year ended December 31, 2000, an increase of \$89.5 million or approximately 72.8%. This increase is primarily due to the addition of property, plant and equipment related to NRG Energy's recently completed acquisitions of electric generating facilities. Approximately \$57.2 million of this increase is related to increased depreciable balances resulting from recently completed domestic acquisitions and the remainder is related to recently completed international acquisitions. Through primarily acquisitions NRG Energy's net property, plant and equipment balance has grown to \$9.4 billion, at the end of 2001 from \$4.0 billion, at the end of 2000, an increase of \$5.4 billion, or approximately 133.4%.

Edgar Filing: NRG ENERGY INC - Form 10-K405

GENERAL, ADMINISTRATIVE AND DEVELOPMENT

For the year ended December 31, 2001, general, administrative and development costs were \$225.7 million, compared to \$172.5 million, an increase of \$53.2 million or approximately 30.8%. This increase is primarily due to increased business development activities, associated legal, technical and accounting expenses, employees and equipment resulting from expanded operations and pending acquisitions. This also includes a \$10.3 million expense related to Enron's bankruptcy. This amount includes a pre-tax charge of \$22.4 million to establish bad debt reserves, which was partially offset by a pre-tax gain of \$12.1 million on a credit swap agreement entered into as part of the NRG Energy's credit risk management program.

31

OTHER INCOME (EXPENSE)

For the year ended December 31, 2001, total other expense was \$416.2 million, compared to \$297.4 million for the year ended December 31, 2000, an increase of \$118.8 million or approximately 40.0%. The increase in total other expense of \$118.8 million, from 2000, consisted primarily of an increase in interest expense that was partially offset by an increase in other income and a reduction in minority interest in earnings of consolidated subsidiaries.

For the year ended December 31, 2001, interest expense (which includes both corporate and project level interest expense) was \$443.7 million, compared to \$293.9 million in 2000, an increase of \$149.8 million or approximately 51.0%. This increase is due to increased corporate and project level debt issued during 2001. During 2001, NRG Energy issued substantial amounts of long-term debt at both the corporate level (recourse debt) and project level (non-recourse debt) to either directly finance the acquisition of electric generating facilities or refinance short-term bridge loans incurred to finance such acquisitions. NRG Energy also completed its issuance of a \$2 billion construction revolver during 2001 of which approximately \$697.5 million is outstanding as of December 31, 2001. NRG Energy's outstanding debt balances has grown to \$9.2 billion at the end of 2001 from \$3.8 billion at the end of 2000. The growth in the outstanding debt balance has contributed directly to the growth in interest expense during 2001, as compared to 2000.

For the year ended December 31, 2001, minority interest in earnings of consolidated subsidiaries was \$6.6 million, compared to \$11.3 million, a decrease of \$4.7 million or approximately 42.1%, as compared to 2000. The decrease is primarily due to lower earnings from the Crockett Cogeneration project which resulted from bad debt reserves established in 2001.

For the year ended December 31, 2001, other income, net, was \$34.1 million, as compared to \$7.9 million, for the year ended December 31, 2000, an increase of \$26.2 million, or approximately 333.8%. Other income, net consists primarily of interest income on cash balances and loans to affiliates, and miscellaneous other items, including the income statement impact of certain foreign currency translation adjustments and the impact of gains and losses on the dispositions of investments. Approximately \$18.0 million of the increase relates to interest on cash balances and loans to affiliates, primarily West Coast Power. The increase also includes gains on foreign currency translation adjustments and miscellaneous asset sales that were partially offset by a \$3.8 million charge to write-off capitalized costs associated with the Estonia project.

INCOME TAX

For the year ended December 31, 2001, income tax expense was \$33.4 million,

Edgar Filing: NRG ENERGY INC - Form 10-K405

compared to an income tax expense of \$92.7 million for the year ended December 31, 2000, a decrease of \$59.3 million, or approximately 64.0%. Approximately \$14.7 million of the decrease is attributed to additional IRC Section 29 energy credits that were recorded in 2001, as compared to the same period in 2000. NRG Energy reported a worldwide effective tax rate of approximately 27.5% (before tax credits) for the year ended December 31, 2001, compared to approximately 46.0% for the year ended December 31, 2000. The overall reduction in tax rates was primarily due to the implementation of state tax planning strategies and a higher percentage of NRG's overall earnings derived from foreign projects in lower tax jurisdictions.

FOR THE YEAR ENDED DECEMBER 31, 2000 COMPARED TO THE YEAR ENDED DECEMBER 31, 1999

For the year ended December 31, 2000, net income was \$182.9 million compared to \$57.2 million for 1999, an increase of \$125.7 million or 219.8%. This increase was due to the factors described below.

REVENUES AND EQUITY IN EARNINGS OF UNCONSOLIDATED AFFILIATES

For the year ended December 31, 2000, NRG Energy had total revenues and equity earnings of \$2.2 billion, compared to \$500.0 million for the year ended December 31, 1999, an increase of \$1.7 billion or approximately 331.6%. NRG Energy's operating revenues from majority-owned operations were \$2.0 billion compared to \$432.5 million, an increase of \$1.6 billion or approximately 366.7%. The increase in revenues from majority-owned operations is primarily due to increased sales resulting from recently completed acquisitions of electric generating facilities, primarily during the later portion of 1999 and the first and third

32

quarters of 2000. During the later portion of 1999, NRG Energy acquired certain electric generating facilities in the northeastern region of the United States. In addition, NRG Energy acquired certain electric generating facilities located in Louisiana and the United Kingdom at the end of the first quarter of 2000. During the third quarter of 2000, NRG Energy acquired Flinders Power and certain thermal operations. In addition, NRG Energy's increased ownership in Crockett Cogeneration has contributed significantly to its revenue growth during 2000, as compared to 1999.

For the year ended December 31, 2000, NRG Energy had equity in earnings of unconsolidated affiliates of \$139.4 million, compared to \$67.5 million for the year ended December 31, 1999, an increase of \$71.9 million or 106.5%. The increase in equity earnings of unconsolidated affiliates is due primarily to NRG Energy's investment in West Coast Power LLC, which benefited from favorable market conditions in California. In addition, NRG Energy's investment in Rocky Road LLC, in the fourth quarter of 1999, also contributed favorably to the increase in equity earnings, compared to the prior year. These increases were partially offset by reductions in the earnings attributable to NRG Energy's international equity investments and its investment in NEO Corporation. NEO Corporation derives a significant portion of its net income from Section 29 tax credits.

OPERATING COSTS AND EXPENSES

For the year ended December 31, 2000, cost of majority-owned operations, was \$1.3 billion, compared to \$269.9 million, an increase of \$1.0 billion or approximately 377.8%. For the year ended December 31, 2000 and 1999, cost of majority-owned operations represented approximately 59.8% and 54.0% of total operating revenues and equity earnings, respectively.

Edgar Filing: NRG ENERGY INC - Form 10-K405

For the year ended December 31, 2000, the increase of \$1.0 billion is primarily due to NRG Energy's recent acquisitions of electric generating facilities during the later portion of 1999 and primarily the first and third quarters of 2000. During the later portion of 1999, NRG Energy acquired certain electric generating facilities in the northeastern region of the United States. In addition, NRG Energy acquired certain electric generating facilities located in Louisiana and the United Kingdom at the end of the first quarter of 2000. During the third quarter of 2000, NRG Energy acquired Flinders Power and certain thermal operations. In addition, NRG Energy's ownership in Crockett Cogeneration has contributed significantly to the growth the cost of majority-owned operations during 2000, as compared to 1999.

DEPRECIATION AND AMORTIZATION

For the year ended December 31, 2000, depreciation and amortization was \$122.9 million, compared to \$37.0 million for the year ended December 31, 1999, an increase of \$85.9 million or 232.1%. This increase is primarily due to the addition of property, plant and equipment related to NRG Energy's recently completed acquisitions of electric generating facilities during the later portion of 1999 and primarily the first and third quarters of 2000. In addition the consolidation of NRG Energy's investment in Crockett Cogeneration at the end of 1999 also contributed to the increase in depreciation and amortization during 2000. Through these acquisitions NRG Energy's net property, plant and equipment balance has grown to \$4.0 billion at the end of 2000 from \$2.0 billion at the end of 1999, an increase of \$2.0 billion or approximately 104.6%.

GENERAL, ADMINISTRATIVE AND DEVELOPMENT

For the year ended December 31, 2000, general, administrative and development costs were \$172.5 million, compared to \$83.6 million, an increase of \$88.9 million or approximately 106.4%. This increase is primarily due to increased business development activities, associated legal, technical and accounting expenses, employees and equipment resulting from expanded operations and pending acquisitions. NRG Energy's asset base has grown to \$6.0 billion at the end of 2000, compared to \$3.4 billion at the end of 1999, an increase of \$2.5 billion or approximately 74.2%. NRG Energy expects this trend to continue as it continues to be successful in expanding its operations through closure of its pending acquisitions and business development activities.

33

OTHER INCOME (EXPENSE)

For the year ended December 31, 2000, total other expense was \$297.4 million, compared to \$78.4 million for the year ended December 31, 1999, an increase of \$219.0 million or approximately 279.3%.

The increase in total other expense of \$219.0 million, as compared to 1999, consisted primarily of an increase in Interest expense and Minority interest in earnings of consolidated subsidiary. These increases were partially offset by decreases in other income, net and gain on sale of interest in projects, in comparison to 1999.

For the year ended December 31, 2000, interest expense (which includes both corporate and project level interest expense) was \$293.9 million, as compared to \$93.4 million in 1999, an increase of \$200.5 million or approximately 214.8%. This increase is due to increased corporate and project level debt issued during 2000 as compared to 1999. During 2000, NRG Energy issued substantial amounts of long term debt at both the corporate level (recourse debt) and project level (non-recourse debt) to either directly finance the acquisition of electric generating facilities or refinance short term bridge loans incurred to finance

Edgar Filing: NRG ENERGY INC - Form 10-K405

such acquisitions. NRG Energy's outstanding long-term debt balances have grown to \$3.8 billion at the end of 2000 from \$2.0 billion at the end of 1999. The growth of such outstanding debt balances has contributed directly to the growth in interest expense during 2000 as compared to 1999.

For the year ended December 31, 2000, minority interest in earnings of consolidated subsidiaries was \$11.3 million, compared to \$2.5 million, an increase of \$8.8 million or approximately 361.5% as compared to 1999. The increase is due to the consolidation of NRG Energy's 58% interest in Crockett Cogeneration at the end of 1999 and the recognition of the minority interest in the project.

For the year ended December 31, 2000, NRG Energy did not recognize any gains on the sale of any project interests. During 1999 NRG Energy recognized a gain of \$11.0 million related to the reduction in its ownership of Cogeneration Corporation of America (CogenAmerica). For the year ended December 31, 2000, other income, net, was \$7.9 million, as compared to \$6.4 million, for the year ended December 31, 1999, an increase of \$1.5 million, or approximately 22.2%. Other income, net consists primarily of interest income on loans to affiliates, and miscellaneous other items, including the income statement impact of certain foreign currency translation adjustments and the impact of project write-downs and gains and losses on the dispositions of investments. The increase of \$1.5 million is primarily due to an increase in interest income in 2000.

INCOME TAX

For the year ended December 31, 2000, income tax expense was \$92.7 million, compared to an income tax benefit of \$26.1 million, an increase of \$118.8 million or approximately 455.6%, compared to 1999. The increase in tax expense in 2000 compared to 1999 is due primarily to higher domestic taxable income. This increase was partially offset by additional IRC Section 29 energy credits. For the year ended December 31, 2000, NRG Energy's overall effective income tax rate was approximately 34%. NRG Energy's effective income tax rate before recognition of tax credits is 46%. This rate is higher than a combined federal and Minnesota statutory rate because a significant portion of NRG Energy's income is generated in New York City, an area with high state and local tax rates. In addition, NRG Energy has recorded a valuation allowance on certain state and foreign tax losses, also increasing the effective tax rate.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES

NRG Energy's discussion and analysis of its financial condition and results of operations are based upon NRG Energy's consolidated financial statements, which have been prepared in accordance with accounting principles generally accepted in the United States. The preparation of these financial statements and related disclosures in compliance with generally accepted accounting principles (GAAP) requires the application of appropriate technical accounting rules and guidance as well as the use of estimates and judgments that affect the reported amounts of assets, liabilities, revenues and expenses, and related disclosures of contingent assets and liabilities. The application of these policies necessarily involves judgments regarding future events, including the likelihood of success of particular projects, legal and regulatory challenges. These judgments, in and of themselves, could materially impact the financial statements and disclosures based on varying

assumptions, which may be appropriate to use. In addition, the financial and operating environment also may have a significant effect, not only on the operation of the business, but on the results reported through the application of accounting measures used in preparing the financial statements and related

Edgar Filing: NRG ENERGY INC - Form 10-K405

disclosures, even if the nature of the accounting policies have not changed.

On an ongoing basis, NRG Energy, evaluates its estimates, utilizing historic experience, consultation with experts and other methods NRG Energy considers reasonable in particular circumstances. In any case, actual results may differ significantly from NRG Energy's estimates. Any effects on NRG Energy's business, financial position or results of operations resulting from revisions to these estimates are recorded in the period in which the facts that give rise to the revision become known.

NRG Energy's significant accounting policies are summarized in Item 8 -- Note 2 of the Consolidated Financial Statements. The following table identifies certain of the significant accounting policies listed in Item 8 -- Note 2 of the Consolidated Financial Statements. The table also identifies the judgments required and uncertainties involved in the application of each. These policies, along with the underlying assumptions and judgments made by NRG Energy's management in their application, have a significant impact on NRG Energy's consolidated financial statements. NRG Energy identifies its most critical accounting policies as those that are the most pervasive and important to the portrayal of NRG Energy's financial position and results of operations, and that require the most difficult, subjective and/or complex judgments by management regarding estimates about matters that are inherently uncertain.

ACCOUNTING POLICY -----	JUDGMENTS/UNCERTAINTIES AFFECTING APPLICATION -----
Consolidation Policy	<ul style="list-style-type: none"> - Determination of control of investments with less than or equal to 50% interest - Consistent application of accounting policies of partnerships and joint ventures
Capitalization Practices	<ul style="list-style-type: none"> - Determination of beginning and ending of capitalization periods
Asset Valuation/Purchase Accounting	<ul style="list-style-type: none"> - Recoverability of investment through future operations - Regulatory and political environments and requirements - Estimated useful lives of assets

ACCOUNTING POLICY

Income Tax Reserves

JUDGMENTS/UNCERTAINTIES AFFECTING APPLICATION

- Application of tax statutes and regulations to transactions
- Anticipated future decisions of tax authorities
- Ability of tax authority decisions/positions to withstand legal challenges and appeals
- Ability to utilize tax benefits through future earnings

Of all of the accounting policies identified in the above table, NRG Energy believes that the following policies and the application thereof to be those having the most direct impact on NRG Energy's financial position and results of operations.

CONSOLIDATION POLICY

NRG Energy's consolidated financial statements include NRG Energy's accounts and those of its subsidiaries. The accounting policies for all of NRG Energy's operations are in accordance with accounting principles generally accepted in the United States. NRG Energy has investments in partnerships, joint ventures and projects, investments such as these in which NRG Energy does not have control, but has the ability to exercise significant influence over the operating and financial policies, are accounted for under the equity method.

CAPITALIZATION PRACTICES, ASSET VALUATION AND PURCHASE ACCOUNTING

As of December 31, 2001, NRG Energy has a carrying value of approximately \$9.4 billion of net property, plant and equipment, \$2.9 billion of which is under construction, representing approximately 73.1% and 22.8% of total assets, respectively. The majority of the carrying value of property, plant and equipment is the result of NRG Energy's recent asset acquisitions. These amounts represent the estimated fair values at the date of acquisition. These estimates may be adjusted based upon completion of certain procedures including third party valuations. For those assets that were or are being constructed by NRG Energy the carrying value reflects the application of NRG Energy's property, plant and equipment policies which incorporate estimates, assumptions and judgments by management relative to the capitalized costs and useful lives of NRG Energy's generating facilities. NRG Energy periodically evaluates the recoverability of the carrying value of its property, plant and equipment when events or changes in circumstances indicate that the carrying value of such assets may be impaired. Asset impairment evaluations are, by nature highly subjective.

REVENUE RECOGNITION AND UNCOLLECTIBLE RECEIVABLES

NRG Energy is primarily an electric generation company, operating a portfolio of majority-owned electric generating plants and certain plants in which its ownership is 50% or less which are accounted for under the equity method of accounting. NRG Energy also produces thermal energy for sale to customers and collects methane gas from landfill sites, which is then used for the generation of electricity. Both physical and financial transactions are entered into to optimize the financial performance of NRG Energy's generating facilities. Electric energy is recognized upon transmission to the customer. Capacity and ancillary revenue is recognized when contractually earned. Revenues from operations and maintenance services, is recognized when the services are performed. NRG Energy uses the equity method of accounting to recognize its pro rata share of the net income or loss of its unconsolidated investments. NRG Energy continually assesses the collectibility of its receivables and in the

Edgar Filing: NRG ENERGY INC - Form 10-K405

event it believes a receivable to be uncollectible an allowance for doubtful accounts is recorded or in the event of a contractual dispute the receivable and corresponding revenue may be considered unlikely of recovery and not recorded in the financial statements until management is satisfied that it will be collected.

DERIVATIVE FINANCIAL INSTRUMENTS

In January 2001, NRG Energy adopted SFAS No. 133, Accounting for Derivative Instruments and Hedging Activities, as amended by SFAS No. 137 and SFAS No. 138. SFAS No. 133 requires NRG Energy to record all derivatives on the balance sheet at fair value. Changes in the fair value of non-hedge derivatives

36

are immediately recognized in earnings. Changes in the fair value of derivatives accounted for as hedges are either recognized in earnings as offset to the charges in the fair value of the related hedged assets, liabilities and firm commitments or for forecasted transactions, deferred and recorded as a component of accumulated other comprehensive income (OCI) until the hedged transactions occur and are recognized in earnings. NRG Energy primarily applies SFAS No. 133 to long-term power sales contracts, long-term gas purchase contracts and other energy related commodities financial instruments used to mitigate variability in earnings due to fluctuations in spot market prices, hedge fuel requirements at generation facilities and protect investments in fuel inventories. SFAS No. 133 also applies to interest rate swaps and foreign currency exchange rate contracts. The application of SFAS No. 133 results in increased volatility in earnings due to the impact market prices have on the market positions and financial instruments that NRG Energy has entered into. In determining the fair value of these derivative/financial instruments NRG Energy uses estimates, various assumptions, judgement of management and when considered appropriate third party experts in determining the fair value of these derivatives.

LIQUIDITY AND CAPITAL RESOURCES

Historically, NRG Energy and its subsidiaries have obtained cash from operations, issuance of debt and equity securities, borrowings under credit facilities, capital contributions from Xcel Energy, reimbursement by Xcel Energy of tax benefits pursuant to a tax sharing agreement and proceeds from non-recourse project financings. NRG Energy has used these funds to finance operations, service debt obligations, fund the acquisition, development and construction of generation facilities, finance capital expenditures and meet other cash and liquidity needs.

NRG Energy targets a financial strategy that sustains investment grade ratings and diversifies investment risk. Specifically, NRG Energy seeks to fund an average of 50% of its project investments with non-recourse project level debt, 20% with senior unsecured recourse debt, and 30% with equity and internal cash generation. The proportion of project financing varies depending on the dispatch and the quantity of revenues under contract so that base load or highly contracted plants will typically support greater than 50% non-recourse debt; whereas merchant or peaking assets will support less than 50% financing. When taken in total NRG Energy has and will continue to arrange 50% of its financing with non-recourse project level debt.

Substantially all of NRG Energy's operations are conducted by project subsidiaries and project affiliates. NRG Energy's cash flow and ability to service corporate-level indebtedness when due is dependent upon receipt of cash dividends and distributions or other transfers from NRG Energy's projects and other subsidiaries. The debt agreements of NRG Energy's subsidiaries and project affiliates generally restrict their ability to pay dividends, make distributions

Edgar Filing: NRG ENERGY INC - Form 10-K405

or otherwise transfer funds to NRG Energy. As of December 31, 2001, six of NRG Energy's subsidiaries and project affiliates are restricted from making cash payments to NRG Energy. Loy Yang, Killingholme, Energy Center Kladno and Louisiana Generating do not currently meet the minimum debt service coverage ratios required for these projects to make payments to NRG Energy; Batesville is resolving equipment problems that will cause its debt service coverage ratio to fall below the minimum required for distribution, though, irrespective of the debt service coverage ratio, no distributions to NRG Energy were anticipated from Batesville in 2002; and Crockett Cogeneration is limited in its ability to make distributions to NRG Energy and the other partners.

NRG Energy believes that the situations at Louisiana Generating, Energy Center Kladno, Batesville and Killingholme do not create an event of default and will not allow the lenders to accelerate the project financings. The forced outage of one 500 MW unit at Loy Yang combined with current market prices may lead to an event of default and the possible acceleration of the Loy Yang project debt in the fourth quarter of 2002, but if insurance claims are paid and budgeted revenues and costs are achieved, along with replacement of the damaged unit as scheduled, default will be avoided. Loy Yang then has an AUD \$500 million repayment due in May 2003 that will need to be refinanced prior to maturity.

The bankruptcy of PG&E creates the potential for a covenant default that would result in the acceleration of the debt at Crockett if not resolved with the lenders. Management has engaged in active discussions with the lenders to Crockett since PG&E filed for bankruptcy in April 2001, and Crockett is being paid each month

37

by PG&E since the bankruptcy filing. Thus NRG Energy believes that an acceleration of the Crockett debt is unlikely. The U.S. Federal Bankruptcy Court recently approved the power purchase agreement thereby increasing the likelihood that Crockett soon will be permitted by the lenders to distribute any excess cash flows to the partners.

In all of these cases NRG Energy's corporate-level financial obligations to project lenders is limited to no more than six-months debt service.

CASH FLOWS

	2001 ----	2000 ----	1999 ----
Net cash provided by (used in) operating activities (in thousands).....	\$276,014	\$361,678	(\$11,380)

Net cash provided by operating activities decreased during 2001 compared with 2000, primarily due to adverse changes to working capital and increased undistributed equity earnings from unconsolidated affiliates. These decreases to net cash were partially offset by increases in net income after non-cash adjustments for depreciation and amortization in 2001 as compared to 2000. The adverse changes to working capital are primarily due to increases in inventory balances, accrued income taxes receivables and changes in other long term assets and liabilities, partially offset by a favorable change in other current liabilities.

Net cash provided by operating activities increased during 2000 compared

Edgar Filing: NRG ENERGY INC - Form 10-K405

with 1999, primarily due to increased earnings during the year, increased depreciation and amortization and deferred income tax and investment tax credits, non-cash reductions in earnings and improved working capital.

	2001 ----	2000 ----	1999 ----
Net cash used in investing activities (in thousands).....	(\$4,335,641)	(\$2,204,148)	(\$1,668,613)

Net cash used in investing activities increased in 2001, compared with 2000, primarily due to additional acquisitions of electric generating facilities and increased capital expenditures and project investments. Net cash used in investing activities increased in 2000, compared with 1999, primarily due to acquisitions of electric generating facilities and increased capital expenditures and project investments.

	2001 ----	2000 ----	1999 ----
Net cash provided by financing activities (in thousands).....	\$4,153,546	\$1,905,870	\$1,705,095

Net cash provided by financing activities during 2001 increased, compared to 2000 due to the issuance of debt and equity securities to finance asset acquisitions. Net cash provided by financing activities during 2000 increased, compared to 1999, primarily due to the issuance of debt and equity securities to finance asset acquisitions.

PROSPECTIVE CAPITAL REQUIREMENTS

In 2002, NRG Energy expects to complete the acquisition from FirstEnergy, for approximately \$1.6 billion in cash and assumed debt, of a portfolio of assets. The FirstEnergy acquisition is expected to be financed with an \$875 million lease with limited recourse to NRG Energy, the assumption of \$145 million of municipal debt secured by the Bay Shore facility, and \$575 million of capital raised directly by NRG Energy through internal cash flow and the sale of existing assets.

CONSTRUCTION PROGRAM REQUIREMENTS

As of December 31, 2001, NRG Energy estimates its capital expenditure program to be approximately \$7.5 billion for the period 2002 - 2006. NRG Energy expects to spend approximately \$1.9 billion in 2002, \$1.8 billion in 2003 and \$1.6 billion in 2004. These estimated expenditures are primarily for NRG Energy's project development program. For 2002, NRG Energy's capital requirements reflect the expected construction costs for those projects currently under construction and those expected to begin construction in the near future. In January 2002, NRG Energy announced that it planned to scale back its previously announced acquisition and construction plans in order to enhance its financial position and improve liquidity in 2002. The

above amounts reflect this previously announced scaled back construction

Edgar Filing: NRG ENERGY INC - Form 10-K405

schedule. In March 2002, Xcel Energy commenced an exchange offer by which Xcel Energy would acquire all of the outstanding publicly held shares of NRG Energy. If successful, Xcel Energy has stated that it intends to delay or cancel \$1.6 billion of planned projects, among other actions. The proposed delays or cancellations have not been factored into the above expected capital expenditures.

NRG Energy's capital expenditure program is subject to continuing review and modification. Actual expenditures may differ significantly depending upon such factors as the success, timing of and the level of involvement in projects under consideration.

ACQUISITION AND CONSTRUCTION PROGRAM CAPITAL SOURCES

NRG Energy has generally financed the acquisition and development of its projects under financing arrangements to be repaid solely from each of its project's cash flows, which are typically secured by the plant's physical assets and equity interests in the project company.

Financing needs are subject to continuing review and can change depending on market and business conditions and changes, if any, in the capital requirements of NRG Energy and its subsidiaries. During the year ended December 31, 2001, NRG Energy financed its acquisition program and construction activities through a combination of the following corporate level and project level financings and operating cash flows. The specifics of such financing arrangements are detailed below:

As of December 31, 2001, NRG Energy had a \$500 million recourse revolving credit facility under a commitment fee arrangement that matures in March of 2002. This facility provided short-term financing in the form of bank loans. At December 31, 2001, NRG Energy had \$170 million outstanding under this facility. In March 2002, the revolving credit facility terminated and was replaced with a \$1.0 billion 364-day corporate level unsecured revolving line of credit with ABN AMRO Bank, N.V. as Administrative Agent.

NRG Energy's \$1.0 billion 364-day revolving line of credit terminates on March 7, 2003. The facility is unsecured and provides for borrowings of "Base Rate Loans" and "Eurocurrency Loans". The Base Rate Loans bear interest at the greater of the Administrative Agent's prime rate or the sum of the prevailing per annum rates for overnight funds plus 0.5% per annum, plus an additional margin which varies based upon NRG Energy's utilization of the facility and its then-current senior debt credit rating. The Eurocurrency loans bear interest at an adjusted rate based on LIBOR plus an adjustment percentage which varies depending on NRG Energy's senior debt credit rating and the amount outstanding under the facility. The facility contains covenants that, among other things, restrict the incurrence of liens and require NRG Energy to maintain a net worth of at least \$500 million plus 25% of NRG Energy's consolidated net income from January 1, 2002 through the determination date. In addition, NRG Energy must maintain a debt to capitalization ratio of not more than 0.68 to 1.00, and must maintain an interest coverage ratio of not less than 2.00 to 1.00, as determined at the end of each fiscal quarter. The failure to comply with any of these covenants would be an Event of Default under the terms of the credit agreement.

In May 2001, NRG Energy's wholly-owned subsidiary, NRG Finance Company I LLC, entered into a \$2 billion revolving credit facility. The facility has been and will be used to finance the acquisition, development and construction of power generating plants located in the United States and to finance the acquisition of turbines for such facilities. The facility provides for borrowings of base rate loans and Eurocurrency loans and is secured by mortgages and security agreements in respect of the assets of the projects financed under the facility, pledges of the equity interests in the subsidiaries or affiliates of the borrower that own such projects, and by guaranties from each such

Edgar Filing: NRG ENERGY INC - Form 10-K405

subsidiary or affiliate. Provided that certain conditions are met that assure the lenders that sufficient security remains for the remaining outstanding loans, the borrower may repay loans relating to one project and have the liens relating to that project released. Loans that have been repaid may be re-borrowed, as permitted by the terms of the facility. The facility terminates on May 8, 2006. The facility is non-recourse to NRG Energy other than its obligation to contribute equity at certain times in respect of projects and turbines financed under the facility. As of December 31, 2001, the aggregate amount outstanding under this facility was \$697.5 million.

39

In January 2001, NRG Energy entered into a bridge credit agreement, with a final maturity date of December 31, 2001. Approximately \$600 million was borrowed under this facility to partially finance NRG Energy's acquisition of the LS Power generation assets.

During March of 2001, NRG Energy raised net proceeds of approximately \$473.4 million through a second common stock offering of 18.4 million shares of common stock. In addition, approximately \$278.4 million of net proceeds were raised through the issuance of 11.5 million equity units. Each equity unit initially comprises a \$25 principal amount of NRG Energy's senior debentures and an obligation to acquire shares of NRG Energy's common stock no later than May 18, 2004. A portion of the combined net proceeds were used to repay a \$600 million bridge credit agreement entered into in January 2001 to acquire certain generating facilities and projects from LS Power; the remaining net proceeds were used for general corporate purposes.

In April 2001, NRG Energy issued \$690 million of senior notes in two tranches. The first tranche of \$350 million matures in April 2011 and bears an interest rate of 7.75%. The second tranche of \$340 million matures in April 2031 and bears an interest rate of 8.625%. The net proceeds of the issuance were used for repayment of short-term indebtedness incurred to fund acquisitions, for investments, general corporate purposes and to provide capital for future planned acquisitions.

In June 2001, NRG Energy entered into a \$600 million term loan facility. The facility was unsecured and provided for borrowings of base rate loans and Eurocurrency loans. The facility had a termination date of June 21, 2002. As of December 31, 2001, the aggregate amount outstanding under this facility was \$600 million. NRG Energy repaid this facility in March 2002 in conjunction with the closing of its new \$1.0 billion unsecured corporate level revolving line of credit and the receipt of \$300 million of cash from Xcel Energy.

On June 22, 2001, NRG Mid Atlantic Generating LLC (Mid Atlantic), a wholly owned subsidiary of NRG Energy, borrowed approximately \$420.9 million under a five year term loan agreement (Agreement) to finance, in part, the acquisition of certain generating facilities from Conectiv. The Agreement terminates in November 2005 and provides for a total credit facility of \$580 million.

In June 2001, NRG Energy through its wholly owned subsidiaries, Brazos Valley Energy LP and Brazos Valley Technology LP, entered into a \$180 million non-recourse construction credit facility to fund the construction of the 600 MW Brazos Valley gas-fired combined cycle merchant generation facility located in Fort Bend County, Texas. As of December 31, 2001, there exists an outstanding balance of \$159.8 million under this credit agreement.

In connection with NRG Energy's acquisition of the Audrain facilities, NRG Energy has recognized a capital lease on its balance sheet in the amount of \$239.9 million, as of December 31, 2001. The capital lease obligation is recorded at the net present value of the minimum lease obligation payable. The

Edgar Filing: NRG ENERGY INC - Form 10-K405

lease terminates in May 2023. In addition, approximately \$326 million was drawn down on NRG Energy's construction revolver to refinance NRG Energy's investment in the Audrain County Municipal bonds originally issued to finance the construction of the Audrain generating facility.

In July 2001, NRG Energy completed the sale of \$500 million of unsecured senior notes. The senior notes were issued in two tranches, the first tranche of \$340 million of 6.75% Senior Notes is due July 2006 and the second tranche of \$160 million of 8.625% Senior Notes is due April 2031. NRG Energy received net proceeds from the sale of both series of notes of approximately \$505.2 million, including interest on the senior notes due 2031, accrued from April 5, 2001. The net proceeds were used to repay all amounts outstanding under NRG Energy's revolving credit agreement and for investments, other general corporate purposes and to provide capital for planned acquisitions.

In August 2001, NRG Energy entered into a 364-day term loan of up to \$296 million. The credit facility was structured as a senior unsecured loan and was partially non-recourse to NRG Energy. The proceeds were used to finance the McClain generating facility acquisition. In November 2001 the credit facility was repaid from the proceeds of a \$181.0 million term loan and \$8.0 million working capital facility entered into by NRG McClain LLC, with Westdeutsche Landesbank Girozentrale, New York branch, as agent (Non-recourse to

40

NRG Energy). The final maturity date of the facility is November 30, 2006. As of December 31, 2001, the aggregate amount outstanding under this facility was \$159.9 million.

REGISTRATION STATEMENTS

In December 2000, NRG Energy filed a universal shelf registration statement with the SEC. Based on this registration, NRG Energy could issue up to \$1.65 billion of debt securities, preferred stock, common stock, depositary shares, warrants and convertible securities. This registration statement included \$150 million of securities that were carried forward from a previous shelf registration. During March 2001, NRG Energy issued 18.4 million shares of common stock and 11.5 million corporate units under this shelf registration. There are no remaining amounts available under this shelf registration as of December 31, 2001.

In June 2001, NRG Energy filed a shelf registration with the SEC to sell up to \$2 billion in debt securities, common and preferred stock, warrants and other securities. NRG Energy expects to use the net proceeds for general corporate purposes, which may include the financing and development of new facilities, working capital and debt reduction. In July 2001, NRG Energy completed the sale of \$500 million of unsecured senior notes under this shelf registration, approximately \$1.5 billion remains available under this facility at December 31, 2001.

PREVIOUSLY EXISTING DEBT AND DEBT ASSUMED UPON ACQUISITION

For additional information on NRG Energy's short term and long term borrowing arrangements, see Item 8 -- Note 9 to the Consolidated Financial Statements.

PROJECTED FINANCING NEEDS

NRG Energy expects to meet its future financing requirements through a combination of internally generated cash, corporate and project level long term and short term debt, equity securities and equity like securities. As outlined above, NRG Energy is expected to need approximately \$7.5 billion during the

Edgar Filing: NRG ENERGY INC - Form 10-K405

period 2002 - 2006 in order to meet its planned construction schedule. NRG Energy plans to issue equity in the total amount of \$1.1 billion during the period 2002 - 2006, and project level long term debt financing in the amount of \$6.3 billion during this same period of time. If Xcel Energy successfully completes its tender offer, NRG Energy's equity capital requirements would come from cash infusions from Xcel Energy. NRG Energy believes it will be able to raise the necessary funding in the capital markets in the near term because most of the project level construction financing has already been committed either through the \$2.0 billion construction revolver or project specific construction financings.

IMPACT OF A DOWNGRADE OF CREDIT RATING

NRG Energy's unsecured credit rating is BBB- from Standard & Poors's and Baa3 from Moody's Investors Service. In December 2001, Moody's placed NRG Energy's credit rating on review for potential downgrade. NRG Energy's credit rating remains under review by Moody's for potential downgrade.

As of December 31, 2001, NRG Energy's off-balance sheet obligations pursuant to its guarantees of performance, equity and indebtedness obligations of its subsidiaries totaled approximately \$721.7 million. NRG Energy is directly liable for the obligations of certain of its project affiliates and other subsidiaries pursuant to guarantees relating to certain of their indebtedness, equity and operating obligations. In addition, in connection with the purchase and sale of fuel emission credits and power generation products to and from third parties with respect to the operation of some of NRG Energy's generation facilities in the United States, NRG Energy may be required to guarantee a portion of the obligations of certain of its subsidiaries.

If Moody's or Standard & Poor's were to downgrade NRG Energy, many of the corporate guarantees and commitments currently in place would need to be supported with letters of credit or cash collateral within 5 to 30 days. As of December 31, 2001, the amount of collateral required, if NRG Energy were downgraded, was approximately \$960 million, to satisfy certain of the above mentioned guarantees and obligations associated with the \$2 billion construction/acquisition revolver. Of the \$960 million in collateral that could be required,

41

approximately \$200 million relates to NRG Energy's guarantees of debt service reserve accounts required by some of its project-level financings; approximately \$400 million relates to NRG Energy's power marketing activities; and \$360 million would be required to support its Contingent Equity Guarantee associated with the \$2 billion construction/acquisition revolver.

Because NRG Energy limits the amount of the guarantees it issues to support NRG Power Marketing's activities, and because of the relatively small number of margin accounts in place, even very large changes in market conditions would not have a material impact on the \$400 million of collateral that would be required for NRG Power Marketing in the event of a downgrade.

In the event of a downgrade, NRG Energy would expect to meet its collateral obligations with cash on hand, available credit lines provided under its revolving line of credit potentially from, liquidity support from Xcel Energy and the issuance of debt into capital markets. Xcel Energy has stated its plan to infuse approximately \$600 million of equity into NRG Energy in 2002 in connection with its exchange offer and merger. Of this amount, \$300 million has already been provided in the form of a convertible subordinated note that Xcel Energy has said it will cancel if its exchange offer and merger are completed. If the offer and merger are not completed, Xcel Energy has said it will continue

Edgar Filing: NRG ENERGY INC - Form 10-K405

to evaluate the terms and timing of any additional investment in NRG Energy. In March 2002, NRG Energy successfully replaced its corporate level \$500 million unsecured revolving line of credit facility with a new 364-day \$1.0 billion corporate level unsecured revolving line of credit. In addition, NRG Energy will maintain its \$125 million letter of credit facility and plans to secure an additional \$125 million credit facility for total credit facilities of \$1.25 billion to be available in 2002.

The Contingent Equity Guarantee associated with NRG Energy's construction/acquisition revolver could increase to a maximum of \$850 million by the end of 2002 as NRG Energy utilizes the capacity of the construction/acquisition revolver. Therefore, the amount of collateral required by the end of 2002 could increase to \$1.45 billion.

ASSET SALES

In January 2002, NRG Energy also announced that it has reviewed its portfolio of operating assets and has identified approximately 650 MW of less strategic facilities that it plans to put up for sale in the near term and expects to raise an additional \$350-\$400 million cash after paying off any project level debt.

OFF BALANCE-SHEET ITEMS

As of December 31, 2001, NRG Energy does not have any significant relationships with structured finance or special purpose entities that provide liquidity, financing or incremental market risk or credit risk. However, as noted in Item 8 -- Note 9 to the Consolidated Financial Statements, NRG Energy issued \$250 million of 8.70% ROARS due March 2020 through an unconsolidated guarantor trust. The sole assets of the trust consist of \$160 million of Reset senior notes due March 2020. NRG Energy has numerous investments of generally less than 50% interests in numerous energy and energy related entities that are accounted for under the equity method of accounting as disclosed in Item 8 -- Note 6 to the Consolidated Financial Statements. NRG Energy's pro-rata share of non-recourse debt held by unconsolidated affiliates was approximately \$940 million as of December 31, 2001. In the normal course of business NRG Energy may be asked to loan funds to these entities on both a long and short-term basis. Such transactions are generally accounted for as accounts payables and receivables to/from affiliates and notes receivables from affiliates and if appropriate, bear market based interest rates. For additional information regarding amounts accounted for as notes receivables to affiliates see Item 8 -- Note 8 to the Consolidated Financial Statements.

CONTRACTUAL OBLIGATIONS AND COMMERCIAL COMMITMENTS

NRG Energy has a variety of contractual obligations and other commercial commitments that represent prospective cash requirements in addition to its capital expenditure programs. The following is a summarized

42

table of contractual obligations. See additional discussion in Item 8 -- Notes 9 and 17 to the Consolidated Financial Statements.

PAYMENTS DUE BY PERIOD AS OF DECEMBER 31, 2001 (IN THOUSANDS)					
	TOTAL	SHORT TERM	1-3 YEARS	4-5 YEARS	AFTER 5 YEARS
CONTRACTUAL CASH OBLIGATIONS					

Edgar Filing: NRG ENERGY INC - Form 10-K405

Long term debt.....	\$ 7,791,660	\$ 477,638	\$274,914	\$2,052,963	\$4,986,145
Capital lease obligations.....	552,326	22,516	45,010	45,010	439,790
Operating leases.....	87,779	10,742	19,111	16,311	41,615
Unconditional purchase obligations.....	1,900,000	1,900,000	--	--	--

INTERDEPENDENT RELATIONSHIPS

NRG Energy does not have any significant interdependent relationships. Since it is a majority owned subsidiary of Xcel Energy there are certain related party transactions that take place in the normal course of business. For additional information regarding NRG Energy's related party transactions see Item 8 -- Note 7 to the Consolidated Financial Statements and Item 13 -- Certain Relationships and Related Transactions.

DOMESTIC ENVIRONMENTAL MATTERS

The construction and operation of power projects are subject to stringent environmental protection and land use regulation in the United States. These laws and regulations generally require lengthy and complex processes to obtain licenses, permits and approvals from federal, state and local agencies. If such laws and regulations are tightened and NRG Energy's facilities are not exempted from coverage, extensive modifications to further reduce environmental impacts could be required.

NRG Energy and its subsidiaries continue to strive to exceed compliance with all environmental regulations currently applicable to their operations. However, it is not possible at this time to determine when or to what extent additional facilities or modifications of existing or planned facilities will be required as a result of changes to environmental regulations, interpretations or enforcement policies or, generally, what effect future laws or regulations may have upon NRG Energy's operations. For more information on Environmental Matters see Item 8 -- Note 17 to the Consolidated Financial Statements.

FEDERAL INITIATIVES

Numerous Federal and legislative initiatives are being undertaken to control pollutant emissions from fossil-fuel-fired combustion units. All of NRG Energy's power plants will be affected in some manner by

43

changes that are expected to occur. In Congress, legislation is being proposed that would impose annual caps on U.S. power plant emissions of nitrogen oxide (NO(X)), sulfur dioxide (SO(2)), mercury, and, in some instances, carbon dioxide (CO(2)). NRG Energy is currently participating in the debates around such legislative proposals as a member of the Electric Power Supply Association. The U.S. Environmental Protection Agency (USEPA) is set to propose in December 2003 rules governing mercury emissions from power plants; these rules are set to be finalized on December 2004. In support of maintaining this schedule, a thorough review of existing power plant mercury emissions data is underway by USEPA and critical stakeholders.

Federal rules governing ozone season NO(X) emissions across the eastern United States have been finalized and will now occur in two phases. The first phase of restrictions will occur in the Ozone Transport Commission region during the 2003 and subsequent ozone seasons; all of NRG Energy's existing, wholly owned generating units in the Northeast and Mid-Atlantic regions are included in this part of the program. The second phase of NO(X) reductions will extend to states within the ozone transport assessment region and restrict 2004 and subsequent ozone season NO(X) emissions in most states east of the Mississippi River.

New rules governing cooling water intake structures at existing facilities are to be proposed during the first quarter of 2002 and finalized in August of 2003. These rules will specify rules governing the location, design, construction, and capacity of cooling water intake structures and reflect the best technology available for minimizing adverse environmental impact therewith.

Other Federal initiatives that would govern regional haze and fine particulate matter are underway, but under extended compliance timeframes.

REGIONAL INITIATIVES

WEST COAST REGION

The California Air Resources Board (CARB) is required under Senate Bill 28 (SB 28) to develop a schedule for retrofitting, by December 31, 2004, emission controls on existing power generation facilities. SB 28 requires that the emission control retrofit schedule be completed by CARB on or before July 1, 2002. CARB's current schedule for implementing the requirements of SB 28 show final rulemaking by spring of 2003. Because the SB 28 emission control retrofit requirements are not intended to change local or regional air quality control requirements, it is difficult to predict what, if any, additional emission controls would be required on NRG Energy's California assets.

The El Segundo and Long Beach Generating Stations are both regulated by the South Coast Air Quality Management District's (SCAQMD) Regional Clean Air Incentives Market (RECLAIM) program. This program, which regulates NO(X) emissions in the Los Angeles area, was amended on May 11, 2001 and included major changes with respect to power generation facilities. New RECLAIM Rule 2009 requires all existing power generation facilities to meet Best Available Retrofit Control Technology (BARCT) for NO(X) emissions from all utility boilers by January 1, 2003, and for all gas turbine units by January 1, 2004. Under the new rule, existing power generation facilities were required to submit compliance plans by September 1, 2001, listing how each unit at the stations

Edgar Filing: NRG ENERGY INC - Form 10-K405

would meet BARCT by the deadlines. El Segundo's compliance plan did not plan for any additional NO(X) controls to meet BARCT since Units 3 & 4 are already equipped with SCR technology (first installed on Unit 4 in 1995 and on Unit 3 in 2001) and Units 1 & 2 are expected to be decommissioned in order to build a new 621 MW combined cycle plant. The SCAQMD denied the El Segundo Compliance Plan in late 2001, citing that the SCRs on Units 3 & 4 could be cost effectively modified to meet a lower NO(X) emission rate. El Segundo Power, LLC has appealed this denial because the SCAQMD criteria for cost effectiveness assumes the units operate at 100% capacity factor, which is not how they truly operate and is contradictory to SCAQMD rules. The appeal case is still pending. The Long Beach Generating Station's compliance plan demonstrated that SCR technology is neither technically feasible nor cost effective and called for approximately \$1 million in modifications to the existing steam injection system to meet BARCT. This compliance plan is still pending a decision by SCAQMD.

44

NORTHEAST REGION

Final rules implementing changes in air regulations in the states of Massachusetts and Connecticut were promulgated in 2000. The Connecticut rules required that existing facilities reduce their emissions of SO(2) in two steps, the first of which took place on January 1, 2002. The second milestone change is set to occur on January 1, 2003. NRG Energy is operating in full compliance with the first phase now and expects to comply with step phase changes in accordance with the established schedule. Connecticut's rules governing emissions of NO(X) were modified to restrict the average, non-ozone season NO(X) emission rate to 0.15 pound per million Btu heat input. NRG Energy will comply with the new NO(X) rules, in part, through selective firing of natural gas.

The new Massachusetts rules set forth schedules under which six existing coal-fired power plants were required to meet stringent emission limits for NO(X), SO(2), mercury, and CO(2). Control of carbon monoxide and particulate matter emissions were reserved for future consideration. NRG Energy has submitted an Emission Control Plan (ECP) to the Massachusetts Department of Environmental Protection (MADEP) which identified natural gas reburn technology as an option for meeting the NO(X) and SO(2) limits specified in the new rule. NRG Energy is conducting ongoing discussions with MADEP with respect to finalizing its ECP. By December 1, 2002, MADEP is to complete an evaluation of the technological and economic feasibility of controlling and eliminating emissions of mercury from the combustion of solid fossil fuel in Massachusetts. Within six months of completing the feasibility evaluation, MADEP must propose emission standards for mercury, with a proposed compliance date of October 1, 2006. NRG Energy is still considering its options with respect to how it will address MADEP's CO(2) emission standards. Such options include filing a legal challenge with respect to MADEP's legal authority to regulate CO(2) emissions.

New rules reducing allowable SO(2) and NO(X) emissions from large, fossil-fuel-fired combustion units in New York State were expected to be proposed in January 2002. No word has been released with regard to the reason the proposal of these rules has been delayed. NRG Energy has provided comments as part of New York State coalition of electricity producers on major conceptual flaws contained in pre-publication releases of the proposed rule.

SOUTH-CENTRAL REGION

The Louisiana Department of Environmental Quality has promulgated State Implementation Plan revisions to bring the Baton Rouge ozone non-attainment area into compliance with National Ambient Air Quality Standards. NRG Energy participated in development of the revisions which require NO(X) emissions to be reduced at the Big Cajun II Power Station to 0.21 pounds per million Btu heat

Edgar Filing: NRG ENERGY INC - Form 10-K405

input. This revision of the Louisiana air rules would appear to constitute a change-in-law covered by agreement between Louisiana Generating LLC and the electric cooperatives allowing the costs of added controls to be passed through to the cooperatives.

MID-ATLANTIC AND NORTH-CENTRAL REGION

No material impending rule changes affecting NRG Energy's existing facilities have been proposed in either of these regions.

INTERNATIONAL ENVIRONMENTAL MATTERS

Most of the foreign countries in which NRG Energy owns or may acquire or develop independent power projects have laws or regulations relating to the ownership or operation of electric power generation facilities. These laws and regulations are typically significant for independent power producers because they are still changing and evolving.

NRG Energy retains appropriate advisors in foreign countries and seeks to design its international development and acquisition strategy to comply with and take advantage of opportunities presented by each

45

country's energy laws and regulations. There can be no assurance that changes in such laws or regulations could not adversely affect NRG Energy's international operations.

RECENT ACCOUNTING DEVELOPMENTS

In June 2001, the Financial Accounting Standards Board (FASB) issued Statement of Financial Accounting Standards (SFAS) No. 142, "Goodwill and Other Intangible Assets". SFAS No. 142 requires that goodwill and intangible assets with indefinite useful lives no longer be amortized but instead be tested for impairment in accordance with SFAS No. 121, "Accounting for the Impairment of Long-lived assets and for Long-lived Assets to Be Disposed Of." Goodwill will no longer be amortized to comply with the provisions of SFAS No. 142. Instead, goodwill and intangible assets that will not be amortized should be tested for impairment annually and on an interim basis if an event occurs or a circumstance changes between annual tests that may reduce the fair value of a reporting unit below its carrying value. An impairment test is required to be performed within six months of the date of adoption, and the first annual impairment test must be performed in the year the statement is initially adopted.

NRG Energy and its subsidiaries, as required, adopted SFAS No. 142 on January 1, 2002. At December 31, 2001, NRG Energy had intangible assets of \$97.1 million, including \$56.6 million of goodwill. These amounts and all intangible assets and goodwill acquired in the future will be accounted for under the new accounting standard. The new accounting standard is expected to initially increase earnings by an immaterial amount due to the elimination of regular amortization expense, but occasionally cause reductions in earnings when impairment write-downs of goodwill and/or intangible assets are required. Expense recognized for amortization of goodwill in 2001 was \$3.8 million. NRG Energy does not expect to recognize any asset impairments as a result of adopting SFAS No. 142 in the first quarter of 2002.

In June 2001, FASB issued SFAS No. 143, "Accounting for Asset Retirement Obligations." This statement addresses financial accounting and reporting for obligations associated with the retirement of tangible long-lived assets and the associated asset retirement costs. SFAS No. 143 requires an entity to recognize the fair value of a liability for an asset retirement obligation in the period

Edgar Filing: NRG ENERGY INC - Form 10-K405

in which it is incurred. Upon initial recognition of a liability for an asset retirement obligation, an entity shall capitalize an asset retirement cost by increasing the carrying amount of the related long-lived asset by the same amount as the liability. SFAS No. 143 is effective for financial statements issued for fiscal years beginning after June 15, 2002. NRG Energy has not completed its analysis of SFAS No. 143.

In October 2001, the FASB issued SFAS No. 144, "Accounting for the Impairment or Disposal of Long-Lived Assets." This statement addresses financial accounting and reporting for the impairment or disposal of long-lived assets. SFAS No. 144 retains and expands upon the fundamental provisions of existing guidance related to the recognition and measurement of the impairment of long-lived assets to be held and used and the measurement of long-lived assets to be disposed of by sale. Generally, the provisions of SFAS No. 144 are effective for financial statements issued for fiscal years beginning after December 15, 2001.

CALIFORNIA LIQUIDITY CRISIS

NRG Energy's California generation assets include a 57.67% interest in Crockett Cogeneration, a 39.5% interest in the Mt. Poso facility and a 50% interest in the West Coast Power partnership with Dynegy.

In March 2001, the California PX filed for bankruptcy under Chapter 11 of the Bankruptcy Code, and in April 2001, Pacific Gas & Electric Company (PG&E) also filed for bankruptcy under Chapter 11. PG&E's filing delayed collection of receivables owed to the Crockett facility. In September 2001, PG&E filed a proposed plan of reorganization. Under the terms of the proposed plan, which is subject to challenge by interested parties, unsecured creditors such as NRG Energy's California affiliates would receive 60% of the amounts owed upon approval of the plan. The remaining 40% would be paid in negotiable debt with terms from 10 to 30 years. The California Power Exchange's (PX) ability to repay its debt is dependent on the extent to which it receives payments from PG&E and SCE. On December 21, 2001, the California bankruptcy court affirmed the Mt. Poso and Crockett Power Purchase Agreement (it had previously affirmed Mt. Poso's agreement) with PG&E and, in respect of the Crockett Power Purchase Agreement, approved a twelve-month

46

repayment schedule of all past due amounts totaling \$49.6 million, plus interest. The first payment of \$6.2 million, including accrued interest, was received on December 31, 2001.

NRG Energy's share of the net amounts owed to West Coast Power by the California ISO and PX totaled approximately \$85.1 million as of December 31, 2001, compared to \$101.8 million at December 31, 2000. These amounts reflect NRG Energy's share of (a) total amounts owed to West Coast Power less (b) amounts that are currently treated as disputed revenues and are not recorded as accounts receivable in the financial statements of West Coast Power LLC, and reserves taken against accounts receivable that have been recorded in the financial statements. The decrease is primarily attributed to cash collections from the California ISO during the fourth quarter of 2001.

ENRON EXPOSURE

During the fourth quarter of 2001, NRG Energy recorded a net after-tax expense of approximately \$6.7 million related to Enron Corp.'s bankruptcy. This amount includes a \$14.2 million after-tax charge to establish bad debt reserves, which was partially offset by a \$7.5 million after-tax gain on a credit swap agreement entered into as part of NRG Energy's credit risk management program. NRG Energy has fully provided for its exposure to Enron; however, as with any

Edgar Filing: NRG ENERGY INC - Form 10-K405

receivable, NRG Energy will pursue collection of all amounts outstanding through the ordinary course of business.

In addition, an Enron subsidiary, NEPCO, is serving as the construction contractor for two greenfield development projects, the Kendall and Nelson projects (2,336 MW combined) currently under construction in Illinois. Enron guaranteed NEPCO's obligations under the construction contracts. To date, the actual construction and engineering work on both projects has continued without disruption and NRG Energy expects the projects to achieve commercial operations on schedule. NRG Energy believes its overall construction costs for these two projects will increase by approximately \$22 per kilowatt, as a result of the need to restructure the underlying construction contracts following the Enron bankruptcy.

CERTAIN TRADING ACTIVITIES

The tables below disclose the trading activities that include non-exchange traded contracts accounted for at fair value. Specifically, these tables disaggregate realized and unrealized changes in fair value; identifies changes in fair value attributable to changes in valuation techniques; disaggregates estimated fair values at December 31, 2001 based on whether fair values are determined by quoted market prices or more subjective means; and indicates the maturities of contracts at December 31, 2001.

TRADING ACTIVITY (Gains/(Losses), in thousands)

Fair Value of contracts outstanding at the beginning of the period.....	\$ (75,188)
Contracts realized or otherwise settled during the period...	(38,097)
Fair value of new contract when entered into during the period.....	--
Changes in fair values attributable to changes in valuation techniques.....	--
Other changes in fair values.....	185,521

Fair value of contracts outstanding at the end of the period.....	\$ 72,236

48

ITEM 7A -- QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

NRG Energy uses a variety of financial instruments to manage its exposure to fluctuations in foreign currency exchange rates on its international project cash flows, interest rates on its cost of borrowing and energy and energy related commodities prices.

CURRENCY EXCHANGE RISK

NRG Energy has an investment in the Kladno project in the Czech Republic. Statement of Financial Accounting Standard (SFAS) No. 52, "Foreign Currency Translation," requires foreign currency gains and losses to flow through the income statement if settlement of an obligation is in a currency other than the local currency of the entity. A portion of the Kladno project debt is in a non-local currency (U.S. dollars and German deutsche marks). As of December 31, 2001, if the value of the Czech koruna decreases by 10% in relation to the U.S. dollar and the German deutsche mark, NRG Energy would record a \$4.2 million loss (after tax) on the currency transaction adjustment. If the value of the Czech koruna increased by 10%, NRG Energy would record a \$4.2 million gain (after tax) on the currency transaction adjustment. Additionally, NRG Energy has an investment in Hsin Yu in Taiwan which holds a payable denominated in U.S. Dollars. If the New Taiwan Dollar increased by 10%, NRG Energy would record a \$0.8 million gain (after tax) on the currency adjustment. These currency fluctuations are inherent to the debt structure of the projects and not indicative of the long-term earnings potential of the investments.

NRG Energy is also subject to currency risks associated with foreign denominated distributions from international investments. In the normal course of business NRG Energy receives distributions denominated in Australian Dollar, British Pound, Euro, Hungarian Forint and Czech Koruna. Upon completion of the Itiquira plant in Brazil, NRG Energy will also be subject to currency risk with the Brazilian Real. NRG Energy engages in a Board approved strategy of hedging foreign denominated cash flows through a program of matching currency inflows and outflows, and to the extent required, fixing the U.S. Dollar equivalent of net foreign denominated distributions with currency forward and swap agreements with highly credit worthy financial institutions.

As of December 31, 2001, NRG Energy had two foreign currency exchange contracts with notional amounts of \$46.3 million. If the contracts had been discontinued on December 31, 2001, NRG Energy would have owed the counter-parties approximately \$2.4 million.

INTEREST RATE RISK

In order to minimize NRG Energy's exposure to changes in interest rates, NRG Energy attempts to maintain 60-70% of its debt as fixed rate, which has proven historically to provide the lowest volatility and price, when calculated on an annual basis. When necessary, NRG Energy will employ the use of interest rate swaps with highly credit worthy counter-parties to maintain this mix of fixed and floating rates.

As of December 31, 2001, NRG energy had various interest rate swap agreements with notional amounts totaling approximately \$2.4 billion. If the swaps had been discontinued on December 31, 2001, NRG Energy would have owed the counter parties approximately \$81.5 million. Based on the investment grade

Edgar Filing: NRG ENERGY INC - Form 10-K405

rating of the counter parties, NRG Energy believes that its exposure to credit risk due to nonperformance by the counter-parties to its hedging contracts is insignificant.

NRG Energy and its subsidiaries have both long and short-term debt instruments that subject it to the risk of loss associated with movements in market interest rates. As of December 31, 2001, a 100 basis point change in the benchmark rate on NRG Energy's variable rate debt would impact net income by approximately \$16.6 million. As of December 31, 2000, NRG Energy did not have a material interest rate exposure as a result of interest rate swaps, which convert floating rate debt into fixed rate debt.

COMMODITY PRICE

NRG Energy is exposed to commodity price variability in electricity, emission allowances and natural gas, oil and coal used to meet fuel requirements. To manage earnings volatility associated with these

49

commodity price risks, NRG Energy enters into financial instruments, which may take the form of fixed price, floating price or indexed sales or purchases, and options, such as puts, calls, basis transactions and swaps.

NRG Energy utilizes a "Value-at-Risk" (VAR) model to estimate a maximum potential loss in the fair value of its commodity portfolio including generation assets, load obligations and bilateral physical and financial transactions. The key assumptions for the NRG Energy VaR model include (1) a lognormal distribution of price returns (2) three day holding period and (3) a 95% confidence interval. The volatility estimate is based on the implied volatility for at the money call options. This model encompasses the following generating regions: Entergy, NEPOOL, NYPP, PJM, WSCC, SPP and Main.

The estimated maximum potential three-day loss in fair value of its commodity portfolio, calculated using the VAR model is as follows:

	(IN MILLIONS)

Year end December 31, 2001.....	\$ 71.7
Average.....	78.8
High.....	126.6
Low.....	58.6
Year end December 31, 2000.....	\$116.0
Average.....	80.0
High.....	125.0
Low.....	50.0

CREDIT RISK

NRG Energy is exposed to credit risk in its risk management activities. Credit risk relates to the risk of loss resulting from the nonperformance by a counter party of its contractual obligations. NRG Energy actively manages its counter-party credit risk. NRG Energy has an established credit policy in place to minimize overall credit risk. Important elements of this policy include ongoing financial reviews of all counter-parties, established credit limits, as well as monitoring, managing, and mitigating credit exposure.

ITEM 8 -- FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

Edgar Filing: NRG ENERGY INC - Form 10-K405

The consolidated financial statements of NRG Energy, Inc. as of December 31, 2001 and 2000, and for the years then ended together with the Report of Independent Accountants are included in this Form 10-K on the pages indicated below.

	PAGE NO.

REPORT OF INDEPENDENT ACCOUNTANTS

To the Board of Directors and Stockholders
of NRG Energy, Inc.:

In our opinion, the consolidated financial statements listed in the accompanying index present fairly, in all material respects, the financial position of NRG Energy, Inc. and its subsidiaries at December 31, 2001 and 2000, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2001, in conformity with accounting principles generally accepted in the United States of America. In addition, in our opinion, the financial statement schedule listed in the accompanying index presents fairly, in all material respects, the information set forth therein when read in conjunction with the related consolidated financial statements. These financial statements and financial statement schedule are the responsibility of the Company's management; our responsibility is to express an opinion on these financial statements and financial statement schedule based on our audits. We conducted our audits of these statements in accordance with auditing standards generally accepted in the United States of America, which require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management and evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

As discussed in Note 21 to the financial statements, the Company adopted Statement of Financial Accounting Standards No. 133, "Accounting for Derivative Instruments and Hedging Activities" on January 1, 2001.

NOTE 1 -- ORGANIZATION

NRG Energy, Inc., (NRG Energy), was incorporated as a Delaware corporation on May 29, 1992. Beginning in 1989, NRG Energy conducted business through its predecessor companies, NRG Energy, Inc. and NRG Group, Inc., Minnesota corporations, which were merged into NRG Energy subsequent to its incorporation. NRG Energy, together with its majority owned subsidiaries and affiliates, is a leading global energy company primarily engaged in the acquisition, development, ownership and operation of power generation facilities and the sale of energy, capacity and related products.

On June 5, 2000, NRG Energy completed its initial public offering. Prior to completing its initial public offering, NRG Energy was a wholly owned subsidiary of Northern States Power Company (NSP). During August 2000, NSP and New Century Energies, Inc. completed their merger. The surviving company operates under the new name Xcel Energy, Inc. (Xcel Energy). The shares of NRG Energy's class A common stock previously held by NSP are now owned by Xcel Energy. As of December 31, 2001, Xcel Energy owned a 74% interest in NRG Energy's outstanding common and class A common stock, representing 97% of the total voting power of NRG Energy's common stock and class A common stock.

In February 2002, Xcel Energy announced its intention to commence an exchange offer to acquire all of NRG Energy's outstanding common stock, and stated its intention to close this transaction in April 2002 (See Note 23).

NOTE 2 -- SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

PRINCIPLES OF CONSOLIDATION AND BASIS OF PRESENTATION

The consolidated financial statements include NRG Energy's accounts and those of its subsidiaries. All significant intercompany transactions and balances have been eliminated in consolidation. Accounting policies for all of NRG Energy's operations are in accordance with accounting principles generally accepted in the United States of America. As discussed in Note 6, NRG Energy has investments in partnerships, joint ventures and projects. Investments in such businesses in which NRG Energy does not have control, but has the ability to exercise significant influence over the operating and financial policies, are accounted for under the equity method. Earnings from equity in international investments are recorded net of foreign income taxes.

CASH AND CASH EQUIVALENTS

Cash equivalents include highly liquid investments (primarily commercial paper) with an original maturity of three months or less at the time of purchase.

RESTRICTED CASH

Restricted cash consists primarily of cash collateral for letters of credit issued in relation to project development activities and funds held in trust accounts to satisfy the requirements of certain debt agreements.

INVENTORY

Edgar Filing: NRG ENERGY INC - Form 10-K405

Inventory is valued at the lower of weighted average cost or market and consists principally of fuel oil, spare parts, coal, kerosene, emission allowance credits and raw materials used to generate steam.

PROPERTY, PLANT AND EQUIPMENT

Property, plant and equipment are stated at original cost or the present value of minimum lease payments for assets under capital leases. Significant additions or improvements extending asset lives are capitalized,

57

while repairs and maintenance are charged to expense as incurred. Depreciation is computed using the straight-line method over the following estimated useful lives:

Facilities and improvements.....	10-45 years
Machinery and equipment.....	7-30 years
Office furnishings and equipment.....	3-5 years

The assets and related accumulated depreciation amounts are adjusted for asset retirements and disposals with the resulting gain or loss included in operations. NRG Energy analyzes property, plant and equipment quarterly for potential impairment, assessing the appropriateness of lives and recoverability of net balances in accordance with Statement of Financial Accounting Standards (SFAS) No. 121, "Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to be Disposed of."

IMPAIRMENT OF LONG LIVED ASSETS

Long-lived assets and intangibles are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. Recoverability of assets to be held and used is measured by a comparison of the carrying amount of the assets to the future net cash flows expected to be generated by the asset. If such assets are considered to be impaired, the impairment to be recognized is measured by the amount by which the carrying amount of the assets exceeds the fair value of the assets. Assets to be disposed of are reported at the lower of the carrying amount or fair value less the cost to sell.

CAPITALIZED INTEREST

Interest incurred on funds borrowed to finance projects expected to require more than three months to complete is capitalized. Capitalization of interest is discontinued when the asset under construction is ready for its intended use. Capitalized interest was approximately \$27,175,000, \$2,667,000, and \$287,000 in 2001, 2000 and 1999, respectively.

CAPITALIZED PROJECT COSTS

Development costs and capitalized project costs include third party professional services, permits, and other costs which are incurred incidental to a particular project. Such costs are expensed as incurred until an acquisition agreement or letter of intent is signed, and the project has been approved by NRG Energy's Board of Directors. Additional costs incurred after this point are capitalized. When a project begins operation, previously capitalized project costs are reclassified to equity investments in affiliates or property plant and

Edgar Filing: NRG ENERGY INC - Form 10-K405

equipment and amortized on a straight-line basis over the lesser of the life of the project's related assets or revenue contract period.

DEBT ISSUANCE COSTS

Debt issuance costs are capitalized and amortized over the terms of the related debt.

INTANGIBLE ASSETS

Goodwill results when NRG Energy purchases a business at a price higher than the underlying fair value of the net assets. Effective January 1, 2002, NRG Energy implemented SFAS No. 142, "Goodwill and Other Intangible Assets." (SFAS No. 142). At December 31, 2001, NRG Energy had intangible assets of \$97.1 million including \$56.6 million of goodwill. These amounts and all intangible assets and goodwill acquired in the future will be accounted for under the new accounting standard. The new accounting can be expected to initially increase earnings due to the elimination of regular amortization expense, but periodically cause reductions in earnings when impairment write-downs of goodwill and/or intangible assets are required.

58

INCOME TAXES

In March 2001, NRG Energy was deconsolidated from Xcel Energy for Federal income tax purposes. Prior to March 13, 2001, NRG Energy was included in the consolidated tax returns of Xcel Energy. NRG Energy calculated its income tax provision on a separate return basis under a tax sharing agreement with Xcel Energy as discussed in Note 10. Current Federal and certain state income taxes were payable to or receivable from Xcel Energy.

Deferred income taxes are recognized for the tax consequences in future years of differences between the tax basis of assets and liabilities and their financial reporting amounts at each year end based on enacted tax laws and statutory tax rates applicable to the periods in which the differences are expected to affect taxable income. Income tax expense is the tax payable for the period and the change during the period in deferred tax assets and liabilities.

REVENUE RECOGNITION

NRG Energy is primarily an electric generation company, operating a portfolio of majority-owned electric generating plants and certain plants in which its ownership interest is 50% or less and which are accounted for under the equity method. In connection with its electric generation business, NRG Energy also produces thermal energy for sale to customers, principally through steam and chilled water facilities. NRG Energy also collects methane gas from landfill sites, which is then used for the generation of electricity. In addition, NRG Energy sells small amounts of natural gas and oil to third parties. NRG Energy's wholly owned subsidiary, NRG Power Marketing, Inc. enters into both physical and financial transactions on behalf of the entities which own the electric generating plants in order to optimize the financial performance of the plants.

Electrical energy revenue is recognized upon transmission to the customer. Capacity and ancillary revenue is recognized when contractually earned. Disputed revenues are not recorded on the financial statements and will not be recognized as income until disputes are resolved and collection is assured.

NRG Energy also performs operations and maintenance services for some of the projects in which it has an interest. Revenue is recognized as service

Edgar Filing: NRG ENERGY INC - Form 10-K405

contract revenue on these contracts when the services are performed.

NRG Energy uses the equity method of accounting to recognize as revenue its pro rata share of the net income or loss of the unconsolidated investment until such time as the company's investment is reduced to zero, at which time equity income is generally recognized only upon receipt of cash distributions from the investee.

NRG Energy recognizes other income for interest income on loans to affiliates as the interest is earned and realizable.

FOREIGN CURRENCY TRANSLATION

The local currencies are generally the functional currency of NRG Energy's foreign operations. Foreign currency denominated assets and liabilities are translated at end-of-period rates of exchange. Revenues, expenses and cash flows are translated at weighted-average rates of exchange for the period. The resulting currency adjustments are accumulated and reported as a separate component of stockholders' equity and are not included in the determination of the results of operations.

CONCENTRATIONS OF CREDIT RISK

Financial instruments which potentially subject NRG Energy to concentrations of credit risk consist primarily of cash, accounts receivable, and notes receivable. Cash accounts are generally held in Federally insured banks. Accounts receivable, notes receivable and derivative instruments are concentrated within entities engaged in the energy industry. These industry concentrations may impact NRG Energy's overall exposure to credit risk, either positively or negatively, in that the customers may be similarly affected by changes in economic, industry or other conditions. Receivables are generally not collateralized; however, NRG

59

Energy believes the credit risk posed by industry concentration is offset by the diversification and creditworthiness of its customer base. See Note 17.

FAIR VALUE OF FINANCIAL INSTRUMENTS

The carrying amount of cash and cash equivalents, receivables, accounts payables, and accrued liabilities approximate fair value because of the short maturity of these instruments. The carrying amounts of long-term receivables approximate fair value as the effective rates for these instruments are comparable to market rates at year end, including current portions. The carrying amount of long term debt was approximately \$8.3 billion and \$3.8 billion at December 31, 2001 and 2000, respectively. The estimated fair value of long-term debt is based on borrowing rates currently available with similar terms and average maturities.

STOCK BASED COMPENSATION

In 1995, the Financial Accounting Standard Board (FASB) issued Statement of Financial Accounting Standard (SFAS) No. 123, "Accounting for Stock Based Compensation." NRG Energy has elected to continue to account for stock-based compensation using the intrinsic value method prescribed in Accounting Principle Board Opinion No. 25, "Accounting for Stock Issued to Employees." Accordingly, NRG Energy records expense in an amount equal to the excess of the quoted market price on the grant date over the option price. Such expense is recognized at the grant date for options fully vested. For options with a vesting period, the expense is recognized over the vesting period. NRG Energy has recognized

Edgar Filing: NRG ENERGY INC - Form 10-K405

approximately \$1.9 million and \$7.3 million of stock based compensation expense for the periods ended December 31, 2001 and 2000, respectively.

NET INCOME PER SHARE

Basic net income per share is calculated based on the weighted average of common shares outstanding during the period. Net income per share, assuming dilution is computed by dividing net income by the weighted average number of common and common equivalent shares outstanding. NRG Energy's only common equivalent shares are those that result from dilutive common stock options and NRG Energy's Corporate Units (see Note 15).

USE OF ESTIMATES

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements, disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from these estimates.

In recording transactions and balances resulting from business operations, NRG Energy uses estimates based on the best information available. Estimates are used for such items as plant depreciable lives, tax provisions, un-collectible accounts and actuarially determined benefit costs and the valuation of long-term energy commodities contracts, among others. As better information becomes available (or actual amounts are determinable), the recorded estimates are revised. Consequently, operating results can be affected by revisions to prior accounting estimates.

NEW ACCOUNTING PRONOUNCEMENTS

In June 2001, the FASB issued SFAS No. 142, "Goodwill and Other Intangible Assets." SFAS No. 142 requires that goodwill and intangible assets with indefinite useful lives no longer be amortized but instead be tested for impairment in accordance with SFAS No. 121, "Accounting for the Impairment of Long-lived assets and for Long-lived Assets to Be Disposed Of." Goodwill will no longer be amortized to comply with the provisions of SFAS No. 142. Instead, goodwill and intangible assets that will not be amortized should be tested for impairment annually and on an interim basis if an event occurs or a circumstance changes between annual tests that may reduce the fair value of a reporting unit below its carrying value. An impairment test is

60

required to be performed within six months of the date of adoption, and the first annual impairment test must be performed in the year the statement is initially adopted.

NRG Energy and its subsidiaries, as required, adopted SFAS No. 142 on January 1, 2002. At December 31, 2001, NRG Energy had intangible assets of \$97.1 million, including \$56.6 million of goodwill. These amounts and all intangible assets and goodwill acquired in the future will be accounted for under the new accounting standard. The new accounting standard is expected to initially increase earnings by an immaterial amount due to the elimination of regular amortization expense, but occasionally cause reductions in earnings when impairment write-downs of goodwill and/or intangible assets are required. Expense recognized for amortization of goodwill in 2001 was \$3.8 million (pre-tax). NRG Energy does not expect to recognize any asset impairments as a result of adopting SFAS No. 142 in the first quarter of 2002.

Edgar Filing: NRG ENERGY INC - Form 10-K405

In June 2001, the FASB issued SFAS No. 143, "Accounting for Asset Retirement Obligations." This statement addresses financial accounting and reporting for obligations associated with the retirement of tangible long-lived assets and the associated asset retirement costs. SFAS No. 143 requires an entity to recognize the fair value of a liability for an asset retirement obligation in the period in which it is incurred. Upon initial recognition of a liability for an asset retirement obligation, an entity shall capitalize an asset retirement cost by increasing the carrying amount of the related long-lived asset by the same amount as the liability. SFAS No. 143 is effective for financial statements issued for fiscal years beginning after June 15, 2002. NRG Energy has not completed its analysis of SFAS No. 143.

In October 2001, the FASB issued SFAS No. 144, "Accounting for the Impairment or Disposal of Long-Lived Assets." This statement addresses financial accounting and reporting for the impairment or disposal of long-lived assets. SFAS No. 144 retains and expands upon the fundamental provisions of existing guidance related to the recognition and measurement of the impairment of long-lived assets to be held and used and the measurement of long-lived assets to be disposed of by sale. Generally, the provisions of SFAS No. 144 are effective for financial statements issued for fiscal years beginning after December 15, 2001.

RECLASSIFICATIONS

Certain prior-year amounts have been reclassified for comparative purposes. These reclassifications had no effect on net income or total stockholders' equity as previously reported.

NOTE 3 -- ASSET ACQUISITIONS

During the year ended December 31, 2001, NRG Energy completed numerous acquisitions. These acquisitions have been recorded using the purchase method of accounting. Accordingly, these purchase prices have been preliminarily allocated to assets acquired and liabilities assumed based on their estimated fair values at the date of acquisition. These estimates may be adjusted based upon completion of certain procedures including third party valuations. Operations of the acquired companies have been included in the operations of NRG Energy since the date of the respective acquisitions.

In January 2001, NRG Energy purchased from LS Power, LLC a 5,339 MW portfolio of operating projects and projects in construction and advanced development that are located primarily in the north central and south central United States. Each facility employs natural gas-fired, combined-cycle technology. Through December 31, 2005, NRG Energy also has the opportunity to acquire ownership interests in an additional 3,000 MW of generation projects developed and offered for sale by LS Power and its partners.

In March 2001, NRG Energy purchased from Cogentrix the remaining 430 MW, or 51.37% interest, in an 837 MW natural gas-fired combined-cycle plant in Batesville, Mississippi. NRG Energy acquired a 48.63% interest in the plant in January 2001 from LS Power.

In June 2001, NRG Energy purchased a 640 MW natural gas-fired power plant in Audrain County, Missouri from Duke Energy North America LLC.

In June 2001, NRG Energy closed on the construction financing for the Brazos Valley generating facility, a 633 MW gas-fired power plant in Fort Bend County, Texas that NRG Energy will build, operate and

Edgar Filing: NRG ENERGY INC - Form 10-K405

manage. At the time of the closing, NRG Energy also became the 100% owner of the project by purchasing STEAG Power LLC's 50% interest in the project. NRG Energy expects the project to begin commercial operation in February 2003.

In June 2001, NRG Energy purchased 1,081 MW of interests in power generation plants from a subsidiary of Conectiv. NRG Energy acquired a 100% interest in the 784 MW coal-fired Indian River Generating Station located near Millsboro, Delaware and in the 170 MW oil-fired Vienna Generating Station located in Vienna, Maryland. In addition, NRG Energy acquired 64 MW of the 1,711 MW coal-fired Conemaugh Generating Station located approximately 60 miles east of Pittsburgh, Pennsylvania and 63 MW of the 1,711 MW coal-fired Keystone Generating Station located approximately 50 miles east of Pittsburgh, Pennsylvania.

In June 2001, NRG Energy purchased a 389 MW gas-fired power plant and a 116 MW thermal power plant, both of which are located on Csepel Island in Budapest, Hungary, from PowerGen. In April 2001, NRG Energy also purchased from PowerGen its interest in Saale Energie GmbH and its 33.3% interest in MIBRAG BV. By acquiring PowerGen's interest in Saale Energie, NRG Energy increased its ownership interest in the 960 MW coal-fired Schkopau power station located near Halle, Germany from 200 MW to 400 MW.

By acquiring PowerGen's interest in MIBRAG, an integrated energy business in eastern Germany consisting primarily of two lignite mines and three power stations, and following MIBRAG's buy back of the shares NRG Energy acquired from PowerGen, NRG Energy increased its ownership of MIBRAG from 33.3% to 50%. The Washington Group International, Inc., owns the remaining 50% of MIBRAG.

In August 2001, NRG Energy acquired an approximately 2,255 MW portfolio of operating projects and projects in advanced development, including projects that NRG Energy intends to develop, that are located in Illinois and upstate New York from Indeck Energy Services, Inc.

In August 2001, NRG Energy acquired Duke Energy's 77% interest in the approximately 520 MW natural-gas fired McClain Energy Generating Facility located near Oklahoma City, Oklahoma. The Oklahoma Municipal Power Authority owns the remaining 23% interest. The McClain facility commenced operations in June 2001.

In September 2001, NRG Energy acquired a 50% interest in TermoRio SA, a 1,040 MW gas-fired cogeneration facility currently under construction in Rio de Janeiro State, Brazil, from Petroleos Brasileiros SA (Petrobras). Commercial operation of the facility is expected to begin in March 2004. NRG Energy has the option to put its interest in the project back to Petrobras after March 2002 if by that time certain milestones have not been met, including final agreement on the terms of all project documents.

During fiscal year 2001, NRG Energy also acquired other minor interests in projects in Taiwan, India, Peru and the State of Nevada.

62

The respective purchase prices have been allocated to the net assets of the acquired entities as follows:

NOTE 6 -- INVESTMENTS ACCOUNTED FOR BY THE EQUITY METHOD

NRG Energy has investments in various international and domestic energy projects. The equity method of accounting is applied to such investments in affiliates, which include joint ventures and partnerships, because the ownership structure prevents NRG Energy from exercising a controlling influence over operating and financial policies of the projects. Under this method, equity in pretax income or losses of domestic

63

partnerships and, generally, in the net income or losses of international projects, are reflected as equity in earnings of unconsolidated affiliates.

A summary of NRG Energy's equity-method investments of 200 MW or more which were in operation at December 31, 2001 is as follows:

NAME	GEOGRAPHIC AREA	ECONOMIC INTER
-----	-----	-----
Gladstone Power Station.....	Australia	37.50%
Loy Yang Power A.....	Australia	25.37%
Lanco Kondapalli Power.....	India	30.00%

NOTE 7 -- RELATED PARTY TRANSACTIONS

NRG Energy and Xcel Energy have entered into material transactions and agreements with one another and are expected to enter into material transactions and agreements from time to time in the future. Certain material agreements and transactions currently existing between NRG Energy and Xcel Energy are described below.

OPERATING AGREEMENTS

NRG Energy has two agreements with Xcel Energy for the purchase of thermal energy. Under the terms of the agreements, Xcel Energy charges NRG Energy for certain costs (fuel, labor, plant maintenance, and auxiliary power) incurred by Xcel Energy to produce the thermal energy. NRG Energy paid Xcel Energy \$7.1 million, \$5.5 million and \$4.4 million in 2001, 2000 and 1999, respectively, under these agreements. One of these agreements expires on December 31, 2002 and the other expires on December 31, 2006.

64

NRG Energy has a renewable 10-year agreement with Xcel Energy, expiring on December 31, 2006, whereby Xcel Energy agreed to purchase refuse-derived fuel for use in certain of its boilers and NRG Energy agrees to pay Xcel Energy a burn incentive. Under this agreement, NRG Energy received \$1.6 million, \$1.5 million and \$1.4 million from Xcel Energy, and paid \$2.8 million, \$2.8 million and \$2.7 million to Xcel Energy in 2001, 2000 and 1999, respectively.

ADMINISTRATIVE SERVICES AND OTHER COSTS

NRG Energy has an administrative services agreement in place with Xcel Energy. Under this agreement NRG Energy reimburses Xcel Energy for certain overhead and administrative costs, including benefits administration, engineering support, accounting, and other shared services as requested by NRG Energy. In addition, NRG Energy employees participate in certain employee benefit plans of Xcel Energy as discussed in Note 11. NRG Energy reimbursed Xcel Energy in the amounts of \$12.2 million, \$5.9 million and \$6.4 million, during 2001, 2000 and 1999, respectively, under this agreement.

NOTE 8 -- NOTES RECEIVABLE

Notes receivable consists primarily of fixed and variable rate notes secured by equity interests in partnerships and joint ventures. The notes receivable as of December 31, are as follows:

	=====	=====

Saale Energie GmbH (SEG) has a long-term electricity supply contract with its sole customer, VEAG. SEG supplies its total available electricity capacity to VEAG. The contract has a term of 25 years. VEAG is obligated to pay on a monthly basis a price that covers 1) the availability of power supply capacity and 2) the operating costs incurred to produce electricity. During the nine months subsequent to NRG Energy's consolidation of SEG in March 2001, approximately \$56.3 million was recognized as revenue under this agreement.

SHORT TERM DEBT

As of December 31, 2001, NRG Energy had a \$500 million recourse revolving credit facility under a commitment fee arrangement that matures in March of 2002. This facility provides short-term financing in the form of bank loans and replaced an earlier facility with substantially similar terms and conditions, that matured in March 2001. At December 31, 2001, NRG Energy had \$170 million outstanding under this facility. In March 2002, the revolving credit facility was terminated and was replaced with a \$1.0 billion 364-day corporate-level unsecured revolving line of credit with ABN AMRO Bank N.V. as Administrative Agent. During the period ended December 31, 2001 the facility bore interest at a floating rate based on LIBOR and Prime rates throughout the period and had a weighted average interest rate of 5.89%.

As of December 31, 2001, NRG Energy, through its wholly owned subsidiary, NRG South Central Generating LLC, had outstanding approximately \$40 million under a project level, non-recourse revolving credit agreement which matures in March 2002. During the period ended December 31, 2001, the weighted average interest rate of such outstanding advances was 4.46%. The maximum available under this facility is \$40 million. NRG Energy intends to renew this facility with a facility having substantially similar terms and conditions.

In January 2001, NRG Energy entered into a bridge credit agreement with a final maturity date of December 31, 2001. Approximately \$600 million was borrowed under this facility to partially finance NRG Energy's acquisition of the LS Power generation assets. In March 2001, the bridge credit facility was repaid with proceeds from NRG Energy's offering of common stock and equity units.

In June 2001, NRG Energy entered into a \$600 million term loan facility. The facility is unsecured and provides for borrowings of base rate loans and Eurocurrency loans. The facility terminates on June 21, 2002. As of December 31, 2001, the aggregate amount outstanding under this facility was \$600 million. During the period ended December 31, 2001 the weighted average interest rate of such outstanding advances was 3.94%. NRG Energy repaid this facility in March 2002, in connection with the closing of its new \$1.0 billion unsecured corporate-level revolving line of credit and the receipt of \$300 million of cash from Xcel Energy.

NRG Energy had \$170 million and \$63 million in outstanding letters of credit as of December 31, 2001 and 2000, respectively.

LONG-TERM DEBT AND CAPITAL LEASES

In May 2001, NRG Energy's wholly-owned subsidiary, NRG Finance Company I LLC, entered into a \$2 billion revolving credit facility. The facility will be used to finance the acquisition, development and construction of power generating plants located in the United States and to finance the acquisition of turbines for such facilities. The facility provides for borrowings of base rate loans and Eurocurrency loans and is secured by mortgages and security agreements in respect of the assets of the projects financed under the facility, pledges of the equity interests in the subsidiaries or affiliates of the borrower that own such projects, and by guaranties from each such subsidiary or affiliate.

Edgar Filing: NRG ENERGY INC - Form 10-K405

Provided that certain conditions are met that assure the lenders that sufficient security remains for the remaining outstanding loans, the borrower may repay loans

67

relating to one project and have the liens relating to that project released. Loans that have been repaid may be re-borrowed, as permitted by the terms of the facility. The facility terminates on May 8, 2006. The facility is non-recourse to NRG Energy other than its obligation to contribute equity at certain times in respect of projects and turbines financed under the facility. As of December 31, 2001, the aggregate amount outstanding under this facility was \$697.5 million. During the period ended December 31, 2001, the weighted average interest rate of such outstanding advances was 4.83%.

As part of NRG Energy's acquisition of the LS Power assets in January 2001, NRG Energy, through its wholly owned subsidiary, LSP Kendall Energy LLC, has acquired a \$554.2 million credit facility. The facility is non-recourse to NRG Energy and consists of a construction and term loan, working capital and letter of credit facilities. As of December 31, 2001, there were borrowings totaling approximately \$499.5 million outstanding under the facility at a weighted average annual interest rate of 5.12%.

Upon the acquisition of the LS Power assets, NRG Energy assumed approximately \$326 million of bonds outstanding originally issued to finance the construction of the Batesville generation plant. In May 1999, LSP Energy Limited Partnership (Partnership) and LSP Batesville Funding Corporation (Funding) issued two series of Senior Secured Bonds (Bonds) in the following total principle amounts: \$150 million 7.16% Series A Senior Secured Bonds due 2014 and \$176 million 8.160% Series B Senior Secured Bonds due 2025. Interest is payable semiannually on each January 15 and July 15. In March 2000, a registration statement was filed by Partnership and Funding and became effective. The registration statement was filed to allow the exchange of the Bonds for two series of debt securities (Exchange Bonds), which are in all material respects substantially identical to the Bonds. The Exchange Bonds are secured by substantially all of the personal property and contract rights of the Partnership and Funding. The Exchange Bonds are redeemable, at the option of Partnership and Funding, at any time in whole or from time to time in part, on not less than 30 nor more than 60 days prior notice to the holders of that series of Exchange Bonds, on any date prior to their maturity at a redemption price equal to 100% of the outstanding principal amount of the Exchange Bonds being redeemed and a make whole premium. In no event will the redemption price ever be less than 100% of the principal amount of the Exchange Bonds being redeemed plus accrued and unpaid interest thereon. Principal payments are payable on each January 15 and July 15 beginning July 15, 2001.

On March 13, 2001, NRG Energy completed the sale of 11.5 million equity units for an initial price of \$25 per unit. The 11.5 million equity units sold included 1.5 million units sold pursuant to the underwriters' over-allotment option. NRG Energy received gross proceeds from the issuance of \$287.5 million. Net proceeds from this issuance were \$278.4 million after deducting underwriting discounts, commissions and estimated offering expenses. Each equity unit initially consists of a corporate unit comprising a \$25 principal amount of NRG Energy's senior debentures and an obligation to acquire shares of NRG Energy common stock no later than May 18, 2004 at a price ranging from between \$27.00 and \$32.94. Approximately \$4.1 million of the gross proceeds have been recorded as additional paid in capital to reflect the value of the obligation to purchase NRG Energy's common stock. Interest payments will be payable on the debentures quarterly in arrears on each February 16, May 16, August 16 and November 16, commencing May 16, 2001. Interest will be payable initially at an annual rate of 6.50% of the principal amount of \$25 per debenture to, but excluding, February

Edgar Filing: NRG ENERGY INC - Form 10-K405

17, 2004, or May 18, 2004 if the interest rate is not reset three business days prior to February 17, 2004 or three business days prior to May 18, 2004, the debentures will bear interest from February 17, 2004, or May 18, 2004, as applicable, at the reset rate to, but excluding, May 16, 2006. In addition, original issued discount will accrue on the debentures. The net proceeds were used in part to reduce amounts outstanding under NRG Energy's \$600 million short-term bridge credit agreement, which was used to finance in part NRG Energy's acquisition of LS Power generation assets.

In March 2001, NRG Energy increased its ownership interest in PERC, which resulted in the consolidation of its equity investment in PERC. As a result, the assets and liabilities of PERC became part of the assets and liabilities of NRG Energy. Upon completion of the transaction, NRG Energy recorded approximately \$37.9 million of outstanding Finance Authority of Maine (FAME) Electric Rate Stabilization Revenue Refunding Bonds Series 1998 (FAME bonds) which were issued on PERC's behalf by FAME in June 1998. The face amount of the bonds that were initially issued was approximately \$44.9 million and was used to repay the Floating Rate Demand Resource Revenue Bonds issued by the Town of Orrington, Maine

68

on behalf of PERC. The FAME bonds are fixed rate bonds with yields ranging from 3.75% to 5.2%. The weighted average yield on the FAME bonds is approximately 5.1%. The FAME bonds are subject to mandatory redemption in annual installments of varying amounts through July 1, 2018. Beginning July 1, 2008 the FAME bonds are subject to redemption at the option of PERC at a redemption price equal to 102% through June 30, 2009, 101% for the period July 1, 2009 to June 30, 2010 and 100% thereafter, of the principal amount outstanding, plus accrued interest. The loan agreement with FAME contains certain restrictive covenants relating to the FAME bonds, which restrict PERC's ability to incur additional indebtedness, and restricts the ability of the general partners to sell, assign or transfer their general partner interests. The bonds are collateralized by liens on substantially all of PERC's assets.

In April 2001, NRG Energy issued \$690 million of senior notes in two tranches. The first tranche of \$350 million matures in April 2011 and bears an interest rate of 7.75%. The second tranche of \$340 million matures in April 2031 and bears an interest rate of 8.625%. Interest on the notes is due semi-annually each April and October. The net proceeds of the issuance were used for repayment of short-term indebtedness incurred to fund acquisitions, for investments, general corporate purposes and to provide capital for future planned acquisitions.

On June 22, 2001, NRG MidAtlantic Generating LLC (MidAtlantic), a wholly owned subsidiary of NRG Energy, borrowed approximately \$420.9 million under a five year term loan agreement (Agreement) to finance, in part, the acquisition of certain generating facilities from Conectiv. The Agreement terminates in November 2005 and provides for a total credit facility of \$580 million. Interest is payable quarterly. The debt is guaranteed by MidAtlantic and its wholly owned subsidiaries. The Agreement provides for a variable interest rate at either the higher of the Prime rate or the Federal Funds rate plus 0.50%, or the London Interbank Offered Rate (LIBOR) of interest. During the period ended December 31, 2001, the weighted average interest rate for amounts outstanding under the Agreement was 4.56%. MidAtlantic is obligated to pay a commitment fee of 0.375% of the unused portion of the credit facility. The Agreement requires MidAtlantic to comply with certain covenants concerning limitations on additional borrowings, sales of assets, capital expenditures, and payment of dividends or other distributions to shareholders.

In June 2001, in connection with NRG Energy's acquisition of the Csepel facilities, NRG Energy assumed a non-recourse credit facility agreement that

Edgar Filing: NRG ENERGY INC - Form 10-K405

provides for borrowings of approximately \$78.5 million and DEM 203.6 million. As of December 31, 2001, there exists an outstanding balance of approximately \$169.7 million under this credit facility. The facility terminates in 2017 with principle payments due quarterly in varying amounts throughout the term of the agreement. Interest is payable quarterly at a variable rate.

In June 2001, NRG Energy through its wholly owned subsidiaries, Brazos Valley Energy LP and Brazos Valley Technology LP, entered into a \$180 million non-recourse construction credit facility to fund the construction of the 600 MW Brazos Valley gas-fired combined cycle merchant generation facility located in Fort Bend County, Texas. As of December 31, 2001, there exists an outstanding balance of \$159.8 million under this credit agreement. The weighted average interest rate as of December 31, 2001 was 4.61%, interest is payable quarterly.

In connection with NRG Energy's acquisition of the COBEE facilities, NRG Energy recorded on its balance sheet approximately \$56.3 million of non-recourse long-term debt that is due in 18 semi-annual installments of varying amounts beginning January 31, 1999 and ending July 31, 2007. The loan agreement provides an A Loan of up to \$30 million and a B Loan of up to \$45 million. Interest is payable semi-annual in arrears at a rate equal to 6-month LIBOR plus a margin of 4.5% on the A Loan and 6-month LIBOR plus a margin of 4.0% on the B Loan. The A Loan and the B Loan are collateralized by a mortgage on substantially all of COBEE's assets.

In August 2001, NRG Energy entered into a 364-day term loan of up to \$296 million. The credit facility was structured as a senior unsecured loan and was partially non-recourse to NRG Energy. The proceeds were used to finance the McClain generating facility acquisition. In November 2001, the credit facility was repaid from the proceeds of a \$181.0 million term loan and \$8.0 million working capital facility entered into by NRG McClain LLC, with Westdeutsche Landesbank Girozentrale, New York branch, as agent (non-recourse to NRG Energy). The final maturity date of the facility is November 30, 2006. As of December 31, 2001, the

69

aggregate amount outstanding under this facility was \$159.9 million. During the period ended December 31, 2001, the weighted average interest rate of such outstanding borrowings was 5.07%.

In connection with NRG Energy's acquisition of the Audrain facilities, NRG Energy has recognized a capital lease on its balance sheet within long-term debt in the amount of \$239.9 million, as of December 31, 2001. The capital lease obligation is recorded at the net present value of the minimum lease obligation payable. The lease terminates in May 2023. NRG Energy will make interest payments only over the term of the lease and no principal payments until the end of the lease term. In addition, NRG Energy has recorded in notes receivable, an amount of approximately \$239.9 million, which represents its investment in the bonds that the county of Audrain issued to finance the project.

In connection with NRG Energy's purchase of PowerGen's interest in Saale Energie GmbH, NRG Energy has recognized a non-recourse capital lease on its balance sheet within long-term debt in the amount of \$311.9 million, as of December 31, 2001. The capital lease obligation is recorded at the net present value of the minimum lease obligation payable over the lease's remaining period of 20 years. In addition, a direct financing lease was recorded in notes receivable in the amount of approximately \$318.9 million.

The NRG Energy Center, Inc. notes are secured principally by long-term assets of the Minneapolis Energy Center (MEC). In accordance with the terms of the note agreement, MEC is required to maintain compliance with certain financial covenants primarily related to incurring debt, disposing of MEC

Edgar Filing: NRG ENERGY INC - Form 10-K405

assets, and affiliate transactions. MEC was in compliance with these covenants at December 31, 2001.

The NRG Energy senior notes are unsecured and are used to support equity requirements for projects acquired and in development. Interest is paid semi-annually.

The \$240 million NRG Energy Senior notes due November 1, 2013 are remarketable or redeemable Security (ROARS). November 1, 2003 is the first remarketing date for these notes. Interest is payable semi-annually on May 1, and November 1, of each year through 2003, and then at intervals and interest rates as discussed in the indenture. On the remarketing date, the notes will either be mandatorily tendered to and purchased by Credit Suisse Financial Products or mandatorily redeemed by NRG Energy at prices discussed in the indenture. The notes are unsecured debt that rank senior to all of NRG Energy's existing and future subordinated indebtedness.

The various NEO notes are term loans. The loans are secured principally by long-term assets of NEO Landfill Gas collection system. NEO Landfill Gas is required to maintain compliance with certain covenants primarily related to incurring debt, disposing of the NEO Landfill Gas assets, and affiliate transactions. NEO was in compliance with these covenants at December 31, 2001.

The Camas Power Boiler LP notes are secured principally by its long-term assets. In accordance with the terms of the note agreements, Camas Power Boiler LP is required to maintain compliance with certain financial covenants primarily related to incurring debt, disposing of assets, and affiliate transactions. Camas Power Boiler was in compliance with these covenants at December 31, 2001.

The Crockett Corporation term loan is secured primarily by the long-term assets of the Crockett Cogeneration project. Crockett is required to maintain compliance with certain financial covenants primarily related to incurring debt, disposing of assets and complying with the terms of the contract to sell energy, capacity and steam to Pacific Gas & Electric and its other customer. Crockett was in compliance with these covenants at December 31, 2001, but the bankruptcy of Pacific Gas & Electric, the counterparty on a material contract that provides security to the lenders, gives rise to a situation that could result in the acceleration of the loan. The Crockett partnership has been working with the lenders to resolve this issue, and it is the view of NRG Energy management that the lenders will not exercise their right to accelerate this loan.

On February 22, 2000, NRG Northeast Generating LLC, an indirect, wholly-owned subsidiary of NRG Energy, issued \$750 million of project level senior secured bonds, to refinance short-term project borrowings and for certain other purposes. The bond offering included three tranches: \$320 million with an interest rate of 8.065% due in 2004, \$130 million with an interest rate of 8.842% due in 2015 and \$300 million with an interest rate of 9.292% due in 2024. Interest and principal payments are due quarterly. The bonds are jointly and

70

severally guaranteed by each of NRG Northeast's existing and future subsidiaries. The bonds are secured by a security interest in NRG Northeast's membership or other ownership interests in the guarantors and its rights under all inter-company notes between NRG Northeast and the guarantors. In December 2000, NRG Northeast Generating LLC exchanged all of its outstanding bonds for bonds registered under the Securities Act of 1933. As of December 31, 2001, there remains \$610 million of outstanding bonds.

In March 2000, NRG Energy issued \$250 million of 8.70% ROARS due March 15, 2005. Each security represents a fractional interest in the assets of an

Edgar Filing: NRG ENERGY INC - Form 10-K405

unconsolidated grantor trust that pays interest semi-annually on March 15, and September 15, of each year through 2005. The sole assets of the Trust consists of (pounds)160 million of Reset senior notes due March 15, 2020 issued by NRG Energy pursuant to the Indenture and certain other defined rights. The Reset senior notes were used principally to finance NRG Energy's acquisition of the Killingholme facility. On March 15, 2005, these senior notes may be remarketed by Bank of America, N.A. at a fixed rate of interest through the maturity date or, at a floating rate of interest for up to one year and then at a fixed rate of interest through 2020, or redeemed by NRG Energy. Interest is payable semi-annually on these securities beginning September 15, 2000 through March 15, 2005, and then at intervals and interest rates established in the remarketing process.

Additionally, three of NRG Energy's foreign subsidiaries entered into a (pounds)325 million (US \$517 million at March 31, 2000) secured borrowing facility agreement with Bank of America International Limited. Under this facility, the financial institutions have made available to our subsidiaries various term loans totaling (pounds)235 million (US \$374 million at March 31, 2000) for purposes of financing the acquisition of the Killingholme facility and (pounds)90 million (US \$143 million at March 31, 2000) of revolving credit and letter of credit facilities to provide working capital for operating the Killingholme facility. The final maturity date of the facility is the earlier of June 30, 2019, or the date on which all borrowings and commitments under the largest tranche of the term facility have been repaid or cancelled.

In March 2000, NRG South Central Generating LLC, an indirect wholly owned subsidiary of NRG Energy, issued \$800 million of senior secured bonds in a two-part offering, to finance its acquisition of the Cajun generating facilities. The first tranche was for \$500 million with a coupon of 8.962% and a maturity of 2016. The second tranche was for \$300 million with a coupon of 9.479% and a maturity of 2024. Interest and principal payments are due quarterly. The bonds are secured by a security interest in NRG Central U.S. LLC's and South Central Generating Holding LLC's membership interests in NRG South Central and NRG South Central's membership interests in Louisiana Generating and all of the assets related to the Cajun facilities including its rights under a guarantor loan agreement and all inter-company notes between it and Louisiana Generating, and a revenue account and a debt service reserve account. In January 2001, NRG South Central Generating LLC exchanged all of its outstanding bonds for bonds registered under the Securities Act of 1933. As of December 31, 2001, there remains \$763.5 million of outstanding bonds.

In September 2000, Flinders Power Finance Pty, an Australian wholly owned subsidiary, entered into a twelve year AUD \$150 million promissory note (US \$81.4 million at September 2000). The interest has a fixed and variable component. At December 31, 2001, the effective interest rate was 5.89% and is paid semi annually.

In December 2000, NRG Energy filed a shelf registration with the SEC to issue up to \$1,650.0 million of an indeterminate amount of debt securities, preferred stock, common stock, depository shares, debt warrants, stock purchase contracts, stock purchase units and hybrid securities. This shelf registration includes \$150 million of securities that were carried forward from NRG Energy's previous shelf registration filed in December 1999.

In June 2001, NRG filed a shelf registration with the SEC to sell up to \$2 billion in debt securities, common and preferred stock, warrants and other securities. NRG expects to use the net proceeds of offering under the shelf for general corporate purposes, which may include the financing and development of new facilities, working capital and debt reduction. In July 2001, NRG Energy completed the sale of \$500 million of unsecured senior notes under this shelf registration. The senior notes were issued in two tranches, the first tranche of \$340 million of 6.75% Senior Notes is due July 2006 and the second tranche of

Edgar Filing: NRG ENERGY INC - Form 10-K405

\$160 million of 8.625% Senior Notes is due April 2031. Interest payments are due semi-annually on January 15 and July 15

71

until maturity for the Senior Notes due 2006 and April 1 and October 1 until maturity for the Senior Notes due 2031. NRG received net proceeds from the sale of both series of notes of approximately \$505.2 million, including interest on the senior notes due 2031, accrued from April 5, 2001. The net proceeds were used to repay all amounts outstanding under NRG's revolving credit agreement and for investments and other general corporate purposes and to provide capital for planned acquisitions.

Annual maturities of long-term debt and capital leases for the years ending after December 31, 2001 are as follows:

(THOUSANDS OF DOLLARS)	TOTAL
-----	-----
2002.....	\$ 500,154
2003.....	159,095
2004.....	160,829

	=====

Total accumulated amortization related to the assets recorded with respect to NRG Energy's capital leases at December 31, 2001 was \$0.

NRG ENERGY CREDIT RATING

Edgar Filing: NRG ENERGY INC - Form 10-K405

NRG Energy's unsecured credit rating is BBB- from Standard & Poor's and Baa3 from Moody's Investors Service. In December 2001, Moody's placed NRG Energy's credit rating on review for potential downgrade. NRG Energy's credit rating remains under review by Moody's for potential downgrade.

As of December 31, 2001, and 2000, NRG Energy's off-balance sheet obligations pursuant to its guarantees of performance, equity and indebtedness obligations of its subsidiaries totaled approximately \$721.7 million and \$493 million, respectively. NRG Energy is directly liable for the obligations of certain of its project affiliates and other subsidiaries pursuant to guarantees relating to certain of their indebtedness, equity and operating obligations. In addition, in connection with the purchase and sale of fuel emission credits and power generation products to and from third parties with respect to the operation of some of NRG Energy's generation facilities in the United States, NRG Energy may be required to guarantee a portion of the obligations of certain of its subsidiaries.

If Moody's or Standard & Poor's were to downgrade NRG Energy, many of the corporate guarantees and commitments currently in place would need to be supported with letters of credit or cash collateral within 5 to 30 days.

72

As of December 31, 2001, the amount of collateral required, if NRG Energy were downgraded, was approximately \$960 million to satisfy certain of the above mentioned guarantees and certain obligations associated with the \$2 billion construction/acquisition revolver. Of the \$960 million in collateral that could be required, approximately \$200 million relates to NRG Energy's guarantees of debt service reserve accounts required by some of its project-level financings, approximately \$400 million relates to NRG Energy's power marketing activities; and \$360 million would be required to support its Contingent Equity Guarantee associated with the \$2 billion Construction/Acquisition Revolver.

Because NRG Energy places a maximum amount on its guarantees in place to support power marketing activities, and because of the relatively small number of margin accounts in place, even very large changes in market conditions would not have a material impact on the approximately \$400 million of collateral that would be required for NRG Power Marketing in the event of a downgrade.

In the event of a downgrade, NRG Energy would expect to meet its collateral obligations with cash on hand, available credit lines provided under its revolving line of credit, liquidity support from Xcel Energy and potentially from the issuance of debt into capital markets. Xcel Energy has stated its plan to infuse \$600 million of equity into NRG Energy in 2002 in connection with its exchange offer and merger. Of this amount, \$300 million has already been provided (March 2002) in the form of a convertible subordinated note that Xcel Energy has said it will cancel if its exchange offer and merger are completed. If the offer and merger are not completed, Xcel Energy has said it will continue to evaluate the terms and timing of any additional investment in NRG Energy. NRG Energy's revolving line of credit is expected to be increased from \$500 million to \$1 billion in March 2002. In addition, NRG Energy will maintain its \$125 million letter of credit facility and plans to secure an additional \$125 million credit facility for total credit facilities of \$1.25 billion to be available in 2002.

The Contingent Equity Guarantee associated with NRG Energy's construction revolver could increase to a maximum of \$850 million by the end of 2002 as NRG Energy utilizes the capacity of the Construction/ Acquisition Revolver. Therefore, the amount of collateral required by the end of 2002 could increase to \$1.45 billion.

Edgar Filing: NRG ENERGY INC - Form 10-K405

NOTE 10 -- INCOME TAXES

Through March 12, 2001, NRG Energy had a tax sharing agreement with its parent, Xcel Energy, that included the following significant provisions: (1) if NRG Energy, along with its subsidiaries, is in a taxable income position, NRG Energy will be currently charged with an amount equivalent to its federal income tax computed as if the group had actually filed a separate return, and (2) if NRG Energy, along with its subsidiaries, is in a tax loss position, NRG Energy will be currently reimbursed to the extent its combined losses are utilized in a consolidated return, and (3) NRG Energy will be currently reimbursed for the tax credits it generates to the extent its tax credits are utilized in a consolidated return.

Due to the 2001 public equity offering, NRG Energy and its subsidiaries will file a federal income tax return separate from Xcel Energy for the period March 13, 2001 through December 31, 2001. This

73

deconsolidation for tax purposes has had no material impact on current or deferred taxes recorded for NRG Energy. The provision (benefit) for income taxes for the years ended December 31, consists of the following:

	2001	2000	1999

	=====	=====
Net deferred tax liability.....	\$445,736	\$ 55,642
	=====	=====

The effective income tax rates for the years ended December 31, 2001 and 2000 differ from the statutory federal income tax rate of 35% as follows:

	2001		2000	
	-----		-----	
Income before income taxes.....	\$298,608		\$ 275,673	
	=====		=====	
Tax at 35%.....	104,512	35.0%	96,486	35.0%
State taxes (net of federal benefit).....	7,576	2.5%	29,541	10.7%
Foreign operations.....	(29,386)	(9.8)%	(10,692)	(3.8)%
Tax credits.....	(48,788)	(16.3)%	(34,083)	(12.3)%
Permanent differences, reserves, other.....	(510)	(0.2)%	11,486	4.1%
	-----		-----	
Income Tax Expense.....	\$ 33,404	11.2%	\$ 92,738	33.6%
	=====	=====	=====	=====

For the year ended December 31, 2001, income tax expense was \$33.4 million, compared to an income tax expense of \$92.7 million for the year ended December 31, 2000, a decrease of \$59.3 million. The decrease in tax expense compared to 2000 was primarily due to increased IRC Section 29 energy credits, a reduction in

the state effective tax rate, and a higher percentage of NRG's overall earnings derived from foreign projects in lower tax jurisdictions. For the year ended December 31, 2001, NRG Energy's overall effective tax rate was 11.2%, compared to 33.6% for the same period in 2000. For the year ended December 31, 2001, NRG Energy's overall effective income tax rate before recognition of tax credits was 27.5% compared to 46.0%, for the same period in 2000.

The effective income tax rate for the year ended December 31, 2000 differs from the statutory federal income tax rate of 35% primarily due to state tax, foreign tax and tax credits as shown above.

NRG Energy intends to reinvest the earnings of foreign operations except to the extent the earnings are subject to current U.S. income taxes. Accordingly, U.S. income taxes and foreign withholding taxes have not been provided on a

Edgar Filing: NRG ENERGY INC - Form 10-K405

cumulative amount of un-remitted earnings of foreign subsidiaries of approximately \$346 million and \$238 million at December 31, 2001 and 2000, respectively. The additional U.S. income tax and foreign withholding tax on the un-remitted foreign earnings, if repatriated, would be offset in whole or in part by foreign tax credits. Thus, it is not practicable to estimate the amount of tax that might be payable.

NOTE 11 -- BENEFIT PLANS AND OTHER POSTRETIREMENT BENEFITS PENSION BENEFITS

Substantially all of NRG Energy's employees participate in defined benefit pension plans. The majority of the employees participate in Xcel Energy's noncontributory, defined benefit pension plan which was formerly sponsored by NSP. Other employees participate in noncontributory, defined benefit pension plans that are sponsored by NRG Energy or NRG Energy affiliates. Benefits are generally based on a combination of an employee's years of service and earnings. Some formulas also take into account Social Security benefits. Plan assets principally consist of the common stock of public companies, corporate bonds and U.S. government securities. In addition, NRG Energy provides postretirement health and welfare benefits (health care and death benefits) for certain groups of its employees. Generally, these are groups that were acquired in recent years and for whom prior benefits are being continued (at least for a certain period of time or as required by union contracts). Cost sharing provisions vary by acquisition group and terms of any applicable collective bargaining agreements. Certain former NRG retirees are covered under the legacy Xcel plan, which was terminated for non-bargaining employees retiring after 1998 and for bargaining employees retiring after 1999.

Xcel's pension and other postretirement health and welfare benefit obligations and assets/(liability) at December 31, 2001 and 2000 were as follows:

	PENSION BENEFITS		OTHER BENEFITS	
	2001	2000	2001	2000
	(THOUSANDS OF DOLLARS)			
Benefit obligation at Dec. 31.....	\$1,366,912	\$1,275,815	\$191,114	\$170,932

76

NRG Energy participates in Xcel Energy's defined contribution 401(K) plan that covers substantially all employees. Total contributions to the plan were approximately \$1.7 million, \$1.1 million and \$0.5 million for the years ended December 31, 2001, 2000 and 1999, respectively.

NRG EQUITY PLAN

During 1998 and 1999, NRG Energy's employees were eligible to participate in its Equity Plan (the Plan). The Plan granted, to employees, phantom equity units that were intended to simulate Stock options. Grant size was based on the participant's position in NRG Energy and base salary. Equity unit valuations were performed annually by an outside valuation firm. The value of an equity unit was the approximate value per share of NRG Energy's stockholder equity as of the valuation date, less the value of Xcel Energy's (formerly NSP) equity investments. The units were awarded to employees annually at the respective year's calculated share price (grant price). The Plan provided employees with a cash pay out for the unit's appreciation in value over the vesting period. The Plan had a seven year vesting schedule with actual payments beginning after the end of the third year and continuing at 20% each year for the subsequent five years. During 2001, 2000 and 1999, NRG Energy recorded compensation expense of approximately \$0, \$6.0 million and \$13.0 million, respectively, for the Plan.

The Plan included a change of control provision, which allowed all shares to vest if NRG Energy's ownership were to change. Subsequent to the completion of NRG Energy's initial public offering in June 2000, the Plan was converted to a new stock option plan (see Note 14).

Edgar Filing: NRG ENERGY INC - Form 10-K405

401(K) PLANS

NRG Energy also assumed several contributory, defined contribution employee savings plans as a result of its 2000 and 1999 acquisition activity. These plans comply with Section 401(k) of the Internal Revenue Code and cover substantially all of our employees who are not covered by Xcel Energy's 401(k) Plan. NRG Energy matches specified amounts of employee contributions to the plan. Employer contributions made to these plans were approximately \$1.5 million, \$1.1 million and \$0.3 million in 2001, 2000 and 1999, respectively.

PENSION AND OTHER BENEFITS -- 2001 ACQUISITIONS

During 2001, NRG Energy acquired several generating assets and assumed benefit obligations for a number of employees associated with those acquisitions. The plans assumption included noncontributory defined benefit pension plans, matched 401(k) savings plans, and contributory post-retirement welfare plans. Of the 2001 acquisitions where these obligations were assumed, approximately 79% percent of such employees are represented by one local union under collective bargaining agreements, which expire on July 1, 2004. Plan liability and expense amounts for these acquisitions are included in the pension and postretirement health care amounts shown above.

PENSION AND OTHER BENEFITS

NRG Energy assumed the Hsin Yu Energy Development Co., LTD. defined pension obligation upon NRG Energy's approximate 60% acquisition of Hsin Yu Development Co. LTD during fiscal year 2001. The approximate net periodic benefit cost for the year related to this plan was \$0.07 million.

NRG Energy also assumed the pension obligation related to Killingholme due to NRG Energy's acquisition of the gas-fired combined cycle, baseload facility in March of 2000. Pension costs relating to this plan for FY 2001 were approximately \$0.5 million.

NOTE 12 -- SALES TO SIGNIFICANT CUSTOMERS

During 2001, sales to two customers accounted for 26.7% and 13.8% of total revenues from majority owned operations in 2001. During 2000, sales to two customers accounted for 22.2% and 12.2% of total

77

revenues from majority owned operations in 2000. Sales to three customers accounted for 21.0%, 19.7% and 10.5% of total revenues from majority owned operations in 1999.

NOTE 13 -- FINANCIAL INSTRUMENTS

The estimated December 31 fair values of NRG Energy's recorded financial instruments are as follows:

2001		2000	
CARRYING AMOUNT	FAIR VALUE	CARRYING AMOUNT	FAIR VALUE
(IN THOUSANDS)			

Edgar Filing: NRG ENERGY INC - Form 10-K405

Cash and Cash equivalents.....	\$ 186,107	\$ 186,107	\$ 95,243	\$ 9
Restricted cash.....	161,842	161,842	12,135	1
Notes receivable, including current portion....	777,602	777,602	77,012	7
Long-term debt, including current portion.....	8,343,986	8,217,452	3,797,318	3,83

For cash and cash equivalents and restricted cash, the carrying amount approximates fair value because of the short-term maturity of those instruments. The fair value of notes receivable is based on expected future cash flows discounted at market interest rates. The fair value of long-term debt is estimated based on the quoted market prices for the same or similar issues.

DERIVATIVE FINANCIAL INSTRUMENTS

Foreign currency exchange rates

At December 31, 2001 and 2000, NRG Energy had various foreign currency exchange instruments with combined notional amounts of \$46.3 million and \$8.8 million, respectively. These foreign currency exchange instruments were hedges of expected future cash flows. If the hedges had been terminated at December 31, 2001 and 2000, NRG Energy would have owed the counterparties \$2.4 million and \$0.7 million, respectively.

Interest rates

At December 31, 2001 and 2000, NRG Energy had various interest-rate swap agreements with combined notional amounts of \$2.4 billion and \$530 million, respectively. These contracts are used to manage NRG Energy's exposure to changes in interest rates. If these swaps had been terminated at December 31, 2001 and 2000, NRG Energy would have owed the counterparties \$81.5 million and \$28.9 million, respectively.

Energy related commodities

At December 31, 2001 and 2000 NRG Energy had various energy related commodities financial instruments with combined notional amounts of \$1.0 billion and \$309.0 million, respectively. These financial instruments take the form of fixed price, floating price or indexed sales or purchases, and options, such as puts, calls, basis transactions and swaps. These contracts are used to manage NRG Energy's exposure to commodity price variability in electricity, emission allowances and natural gas, oil and coal used to meet fuel requirements. If these contracts were terminated at December 31, 2001 and 2000, NRG Energy would have received \$224.1 million and \$52.8 million from counterparties, respectively.

Credit Risk

Management believes that NRG Energy's exposure to credit risk due to nonperformance by the counter-parties to its hedging contracts is insignificant, based on the investment grade rating of the counterparties. Counter-parties consist principally of financial institutions and major energy companies. NRG Energy actively manages its exposure to counter-party risk. NRG Energy has an established credit policy in place to minimize overall credit risk. Important elements of this policy include ongoing financial reviews of all counterparties, established credit limits, as well as monitoring, managing and mitigating credit exposure.

Edgar Filing: NRG ENERGY INC - Form 10-K405

During the fourth quarter of 2001, NRG Energy recorded a net after-tax expense of approximately \$6.7 million related to Enron Corp.'s bankruptcy. This amount includes a \$14.2 million after-tax charge to establish bad debt reserves, which was partially offset by a \$7.5 million after-tax gain on a credit swap agreement entered into as part of NRG Energy's credit risk management program. NRG Energy has fully provided for its exposure to Enron; however, as with any receivable, NRG Energy will pursue collection of all amounts outstanding through the ordinary course of business.

In addition, an Enron subsidiary, NEPCO, is serving as the construction contractor for two greenfield development projects, the Kendall and Nelson projects (2,336 MW combined) currently under construction in Illinois. Enron guaranteed NEPCO's obligations under the construction contracts. To date, the actual construction and engineering work on both projects has continued without disruption and NRG Energy expects the projects to achieve commercial operations on schedule. NRG Energy believes its overall construction costs for these two projects will increase by approximately \$22 per kilowatt, as a result of the need to restructure the underlying construction contracts following the Enron bankruptcy.

NOTE 14 -- CAPITAL STOCK

SALE OF STOCK

In March 2001, NRG Energy completed the sale of 18.4 million shares of common stock for an initial price of \$27 per share. The offering was completed with all 18.4 million shares of common stock being sold including the over-allotment shares of 2.4 million. NRG Energy received gross proceeds from the issuance of \$496.6 million. Net proceeds from the issuance were \$473.4 million after deducting underwriting discounts, commissions and estimated offering expenses. The net proceeds were used in part to reduce amounts outstanding under NRG Energy's short-term bridge credit agreement, which was used to finance in part NRG Energy's acquisition of the LS Power assets. At December 31, 2001, there were approximately 50,939,875 shares of common stock, and 147,605,000 shares of Class A common stock issued and outstanding.

In June 2000, NRG Energy sold 32.4 million shares of common stock at \$15 per share. Net proceeds from the offering were \$453.7 million. NRG Energy has authorized capital stock consisting of 550,000,000 shares of common stock, and 250,000,000 shares of Class A common stock. At December 31, 2000, there were approximately 32,396,000 shares of common stock, and 147,605,000 shares of Class A common stock issued and outstanding.

INCENTIVE COMPENSATION PLAN

In June 2000, NRG Energy adopted a new incentive compensation plan (the New Stock Plan), which was approved by shareholders in June 2001 and which will be administered by a committee appointed by the Board of Directors. The New Stock Plan provides for awards in the form of stock options, stock appreciation rights, restricted stock, performance units, performance shares, or cash based awards as determined by the Board of Directors. All officers, certain other employees, and non-employee directors are eligible to participate in the plan. Nine million shares of common stock are authorized for issuance under the Stock Plan. Initially, only stock option grants will be made to certain officers, independent directors and employees under the plan.

Each new option granted is valued at the fair market value per share at date of grant. The difference between the option price and the market value of the stock at the date of grant, if any, of each option on the date of grant is recorded as compensation expense over a vesting period. Options granted prior to June 2001 vest over a period of five years, with 25% vesting in each of the years two through five and generally expire ten years from the date of grant.

Edgar Filing: NRG ENERGY INC - Form 10-K405

Options granted in June 2001 and subsequently, vest over a four year period, with 25% vesting each year and generally expire ten years from the date of grant. The board's independent directors' options vested immediately upon being granted. The average exercise price of vested options at December 31, 2001 and 2000 was \$14.39 and \$9.51, respectively, all of which were granted in replacement of units previously outstanding under the equity plan. Compensation expense related to options granted totaled \$1.9 million and \$7.3 million, for the year ended December 31, 2001 and 2000, respectively.

79

At December 31, 2000, no employee stock options were exercisable. Other options currently granted under the equity plan will fully vest periodically and become exercisable through the year 2005 at prices ranging from \$5.75 to \$17.25. Stock option transactions were (shares in thousands):

\$28.62 - \$31.80.....	60	9.2	31.80	--
	-----	---	-----	-----
Total.....	7,427	7.2	\$14.39	1,368
	=====	===	=====	=====

The fair value of each option grant was estimated on the date of grant using the Black-Scholes option-pricing model, with the following weighted-average assumptions used for grants in 2001 and 2000.

	2001	2000
	-----	-----
Dividends per year.....	--	--
Expected volatility.....	60.54	50.26
Risk-free interest rate.....	5.47	5.01
Expected life (years).....	7	7

Using the Black-Scholes option-pricing model, the weighted-average fair value of NRG Energy's stock options granted for 2001 and 2000 is \$13.26 and \$14.38 per share, respectively.

80

NRG Energy accounts for its stock option plan in accordance with Accounting Principles Board Opinion No. 25, "Accounting for Stock Issued to Employees," under which, no compensation cost has been recognized. Had compensation cost been determined consistent with SFAS No. 123, "Accounting for Stock-Based Compensation" (SFAS No. 123), NRG Energy's net income and per share amounts would have approximated the following pro forma amounts for the years ended December 31:

		2001	2000
		-----	-----
Net income.....	As reported	\$265,204	\$182,9
	Pro Forma	\$260,404	182,2
Earnings per share data:			
Basic earnings per share.....	As reported	\$ 1.36	\$ 1.
	Pro Forma	1.34	1.
Diluted earnings per share.....	As reported	1.35	1.
	Pro Forma	1.33	1.

The effects of applying SFAS No. 123 on pro forma disclosures of net income and earnings per share for the years ended December 31, 2001 and 2000 are not likely to be representative of the pro forma effects on net income and earnings per share in future years for the following reasons: 1) the number of future shares to be issued under this plan is not known, 2) the effect of an additional year of vesting no options granted in prior years is not considered in the

Edgar Filing: NRG ENERGY INC - Form 10-K405

assumptions as of December 31, 2001 and 3) the assumptions used to determine the fair value can vary significantly.

NOTE 15 -- EARNINGS PER SHARE

Basic earnings per common share were computed by dividing net income by the weighted average number of Class A common stock and common stock shares outstanding during each year. Shares issued during the year are weighted for the portion of the year that they were outstanding. Diluted earnings per share is computed in a manner consistent with that of basic earnings per share while giving effect to all potentially dilutive common shares that were outstanding during the period. The dilutive effect of the potential exercise of outstanding options to purchase shares of common stock is calculated using the treasury stock method. The dilutive effect of the issuance of common stock in the future due to the outstanding warrants (11.5 million shares) to buy NRG Energy common stock issued in connection with NRG Energy's Corporate Units issuance in March 2001 is calculated using the treasury stock method. The reconciliation of basic earnings per common share to diluted earnings per share is shown in the following table (in thousands, except per share data):

FOR THE YEARS ENDED DECEMBER 31,							
2001			2000				
INCOME	SHARES	PER SHARE AMOUNT	INCOME	SHARES	PER SHARE AMOUNT	INCOME	
<hr/>							
Basic earnings per share							
Income before							
extraordinary items...	\$265,204	194,929	\$ 1.36	\$182,935	165,861	\$1.10	\$57
Effect of dilutive							
securities:							
Warrants (corporate							
units).....	--	--	--	--	--	--	
Stock options.....	--	1,510	\$ (0.01)	--	1,128	--	
	-----	-----	-----	-----	-----	-----	-----
Diluted earnings per							
share.....	\$265,204	196,439	\$ 1.35	\$182,935	166,989	\$1.10	\$57
	=====	=====	=====	=====	=====	=====	=====

As of December 31, 2001, 2000 and 1999, 2,077,180, 2,700 and 0 options, respectively, have been excluded from the dilutive calculation above as their exercise price exceeded the average fair market value of NRG Energy's common stock.

81

NOTE 17 -- COMMITMENTS AND CONTINGENCIES

OPERATING LEASE COMMITMENTS

NRG Energy leases certain of its facilities and equipment under operating leases, some of which include escalation clauses, expiring on various dates through 2010. Rental expense under these operating leases was \$9.7 million, \$2.3 million and \$2.2 million in 2001, 2000 and 1999, respectively. Future minimum lease commitments under these leases for the years ending after December 31, 2001 are as follows:

	(THOUSANDS OF DOLLARS)

2002.....	\$10,742
2003.....	9,844
2004.....	9,267
2005.....	8,355
2006.....	7,956
Thereafter.....	41,615

Total.....	\$87,779
	=====

CAPITAL COMMITMENTS

NRG Energy's management expects future capital expenditures related to projects listed below, as well as construction and the purchase of turbines, to total approximately \$7.5 billion in the years 2002 through 2006. NRG Energy anticipates funding its ongoing capital requirements through the issuance of debt, equity and equity like instruments, preferred stock and operating cash flows.

NRG Energy has contractually agreed to the monetization of certain tax credits generated from landfill gas sales through the year 2007.

FirstEnergy. In November 2001, NRG Energy signed purchase agreements to acquire or lease four coal-fired generating facilities totaling approximately 2,535 MW and two ash disposal sites from subsidiaries of FirstEnergy Corporation. The four generating facilities are located in Ohio, along the shore of Lake Erie, and are the approximately 376 MW Ashtabula facility in Ashtabula, Ohio, the approximately 249 MW Lake Shore facility in downtown Cleveland, the approximately 1,262 MW Eastlake facility near Cleveland and the approximately 648 MW Bay Shore facility near Toledo. NRG Energy is also acquiring all of the equity interests in Bay Shore Power Company, which is a subsidiary of

Edgar Filing: NRG ENERGY INC - Form 10-K405

FirstEnergy and the owner of a 136 MW petroleum coke-fired steam generating project currently undergoing testing and commissioning on the Bay Shore facility site. NRG Energy is working to close these acquisitions in the second quarter of 2002. In connection with the acquisition of these facilities, NRG Energy is entering into a Transition Power Purchase Agreement with FirstEnergy, pursuant to which NRG Energy will supply to FirstEnergy approximately 95% of the output from the facilities through 2005.

82

Conectiv. In June 2001, NRG Energy extended purchase agreements that were entered into with a subsidiary of Conectiv to acquire 794 MW of coal and oil-fired electric generating capacity and other assets in New Jersey and Pennsylvania, including an additional 66 MW of the Conemaugh Generating Station and an additional 42 MW of the Keystone Generating Station. By their terms these purchase agreements became terminable by either party after February 28, 2002, and on April 1, 2002 NRG Energy exercised its right to terminate the agreements.

CALIFORNIA LIQUIDITY CRISIS

NRG Energy's California generation assets include a 57.67% interest in Crockett Cogeneration, a 39.5% interest in the Mt. Poso facility and a 50% interest in the West Coast Power partnership with Dynegy.

In March 2001, the California PX filed for bankruptcy under Chapter Eleven of the Bankruptcy Code, and in April 2001, Pacific Gas & Electric Company (PG&E) also filed for bankruptcy under Chapter Eleven. PG&E's filing delayed collection of receivables owed to the Crockett facility. In September 2001, PG&E filed a proposed plan of reorganization. Under the terms of the proposed plan, which is subject to challenge by interested parties, unsecured creditors such as NRG Energy's California affiliates would receive 60% of the amounts owed upon approval of the plan. The remaining 40% would be paid in negotiable debt with terms from 10 to 30 years. The California Power Exchange's (PX) ability to repay its debt is dependent on the extent to which it receives payments from PG&E and SCE. On December 21, 2001, the California bankruptcy court affirmed the Crockett Power Purchase Agreement (it had previously affirmed Mt. Poso's agreement) with PG&E and, in respect of the Crockett Power Purchase Agreement, approved a twelve-month repayment schedule of all past due amounts totaling \$49.6 million, plus interest. The first payment of \$6.2 million, including accrued interest, was received on December 31, 2001.

NRG Energy's share of the net amounts owed to West Coast Power by the California ISO and PX totaled approximately \$85.1 million as of December 31, 2001 compared to \$101.8 million at December 31, 2000. These amounts reflect NRG Energy's share of (a) total amounts owed to West Coast Power less (b) amounts that are currently treated as disputed revenues and are not recorded as accounts receivable in the financial statements of West Coast Power LLC, and reserves taken against accounts receivable that have been recorded in the financial statements. The decrease is primarily attributed to cash collections from the California ISO during the fourth quarter of 2001.

CONTRACTUAL COMMITMENTS

In connection with the acquisition of certain generating facilities NRG Energy entered into various long-term transition agreements and standard offer agreements that obligated NRG Energy to provide its customers, primarily the previous owners of the acquired facilities, with a certain portion of the energy and capacity output of the acquired facilities.

During 1999, NRG Energy acquired the Huntley and Dunkirk generating facilities from Niagara Mohawk Power Corporation (NiMo). In connection with this

Edgar Filing: NRG ENERGY INC - Form 10-K405

acquisition, NRG Energy entered into a 4-year agreement with NiMo that requires NRG Energy to provide to NiMo pursuant to a predetermined schedule fixed quantities of energy and capacity at a fixed price.

During 1999, NRG Energy acquired certain generating facilities from Connecticut Light and Power Company (CL&P). NRG also entered into a 4-year standard offer agreement that requires NRG Energy to provide to CL&P a portion of its load requirements through the year 2003 at a substantially fixed rate.

During 2000, NRG Energy acquired the non-nuclear generating assets of Cajun Electric. Upon acquisition of the facilities, NRG Energy entered into various long-term power purchase agreements with the former customers of Cajun Electric, primarily distribution cooperatives and municipalities. These agreements specify that NRG Energy provide these customers with all requirements necessary to satisfy the energy and capacity needs of their retail load.

Also during 2000, NRG Energy acquired the Killingholme generating facilities from National Power plc. In connection with this acquisition, NRG Energy entered into certain agreements to provide the natural gas to

83

operate the facility which generally sells its power into the spot market. NRG Energy has entered into two gas purchase agreements, the first being a 5-year agreement that provides approximately 30% of the generating facilities natural gas requirements and the second agreement being a 10-year agreement that provides approximately 70% of the generating facilities natural gas requirements. NRG Energy has also entered into a 5-year fixed price agreement to resell up to 15% of the gas it has contracted for at a slightly higher price.

Also during 2000, NRG Energy acquired the Flinders Power operations in South Australia. Upon the closing of the acquisition, NRG Energy assumed a gas purchase and sales agreement relating to the Osborne generating plant with a remaining life of 18-years. These agreements require NRG Energy to purchase a specified quantity of natural gas from a third party supplier at a fixed price for 18-years and resell the natural gas to Osborne at a fixed price for 13-years. The sales price is substantially lower than the purchase price. NRG Energy has recorded the liability associated with this out of the market contract in the amount of approximately \$66 million in other long-term obligations and deferred income on its balance sheet. In addition, NRG Energy has entered into a contract for differences agreement which provides for the sale of energy into the South Australian power pool through the year 2002. The agreement provides for a swap of the variable market price to a fixed price.

During 2001, NRG Energy acquired a portfolio of projects located in Delaware, Maryland and Pennsylvania from Conectiv. Upon closing of the acquisition, NRG Energy assumed a power purchase agreement. This agreement, which is not project specific, requires NRG Energy to deliver and Conectiv to purchase 500 MW of electric energy around the clock at a specified price through 2005. The sales price of the contracted electricity was substantially lower than the fair value that the electricity on the merchant market at the date of acquisition. NRG Energy has recorded the liability associated with the out of market contract on the balance sheet in the amount of approximately \$89.4 million as of December 31, 2001. Approximately \$45.1 million is recorded in other current liabilities and approximately \$44.3 million in other long-term obligations and deferred income. The difference will be amortized into income over the life of the agreement.

ENVIRONMENTAL REGULATIONS

As part of acquiring existing generating assets, NRG Energy has inherited environmental liabilities. Generally, potential liabilities are identified and

Edgar Filing: NRG ENERGY INC - Form 10-K405

researched during due diligence processes and funds are reserved in the financial pro forma to address them as circumstances dictate. Often, potential implementation plans are changed, delayed or abandoned due to one or more of the following conditions: (a) extended negotiations with regulatory agencies, (b) a delay in promulgating rules critical to dictating the design of expensive control systems, (c) changes in governmental/regulatory personnel, (d) changes in governmental priorities (i.e., events of September 11th, 2001), or (e) selection of a less expensive compliance option than originally envisioned. The following paragraphs present an update on capital investments associated with existing environmental liabilities.

WEST COAST REGION

Environmental expenditures at the Encina Generating Station include the installation of Selective Catalytic Reduction (SCR) emission control technology on all five units. These SCRs are mandated by the San Diego County Air Pollution Control District Rule 69 and by the December 13, 2001 Rule 69 Regular Variance Order 3732. Units 4 & 5 were retrofit with SCRs beginning in late 2001 and scheduled to end in spring 2002. SCR emission control installations on Units 1, 2 & 3 are scheduled to be phased in beginning in fall 2002 and ending in spring 2003. The cost for all five SCR retrofits is estimated at approximately \$39 million.

NORTHEAST REGION

The total budgeted capital expenditures during the first 5 years of the Con-Ed, NIMO, Somerset and CLP assets acquired by NRG Energy were in the range of \$60 million dollars. During the years 1999-2001, NRG Energy recorded approximately \$4 million of expenditures on environmental matters related to inherited

84

liabilities associated with these assets. These expenditures were incurred as a result of moving forward with efforts to address NRG Energy's inherited remedial obligations, studies related to establishing strategies for complying with the NO(X) budget program, and other matters required as part of consent orders transferred to NRG Energy as part of acquisition packages. As the company progresses in its negotiations to close out consent order issues, an increased rate of expenditure is anticipated. NRG Energy estimates approximately \$7.5 million to close out the remaining issues associated with remedial investigations/clean-ups at Somerset, Arthur Kill, Astoria, Middletown, Norwalk Harbor, Devon, and Montville. In response to liabilities associated with these activities, accruals have been established when reasonable estimates are possible. As of December 31, 2001 and 2000, NRG Energy has established such accruals in the amount of approximately \$5.0 million and \$6.0 million, respectively. NRG Energy has not used discounting in determining its accrued liabilities for environmental remediation and no claims for possible recovery from third party issuers or other parties related to environmental costs have been recognized in NRG Energy's consolidated financial statements. NRG Energy adjusts the accruals when new remediation responsibilities are discovered and probable costs become estimable, or when current remediation estimates are adjusted to reflect new information. During the years 2001, 2000 and 1999, NRG Energy recorded expenses of approximately \$15.3 million, \$3.4 million and \$0.3 million of expenditures related to environmental matters, respectively.

The balance of the estimated \$60 million in capital expenditures over the next five years is most notably for landfill construction, installation of NO(X) controls, installation of best available technology for minimizing environmental impacts associated with impingement and entrainment of fish and larvae, particulate matter control improvements, and spill prevention controls.

Edgar Filing: NRG ENERGY INC - Form 10-K405

MID-ATLANTIC REGION

Capital expenditures over the next five years related to resolving environmental concerns at the Indian River Generating Station are centered around possible closure of the existing landfill and construction of a new cell(s) to replace it, possible addition of a cooling tower, and the addition of controls to reduce NO(X) emissions. Currently, cost estimates for addressing the first two items vary widely with NRG Energy's success in selling ash and in NRG Energy's negotiations with the Delaware Natural Resources and Environment Commission (DNREC). If ash sales are poor, it is estimated that NRG Energy could spend up to \$11 million over the five-year timeframe to close/construct sections of the landfill; if sales are robust, expenditures related to closure/construction are expected to be minimal. In the unlikely event NRG Energy is unable reach agreement with DNREC on extension of a variance, NRG Energy estimates a \$40 million cooling tower could be required; if negotiations are successful, a cooling tower can be avoided.

NRG Energy has also budgeted funds for installation of NO(X) controls at both the Indian River and Vienna Generating Stations.

SOUTH CENTRAL REGION

Approximately \$35 million over the next five years has been budgeted for the addition of NO(X) controls to Units 1-3 at Big Cajun II; \$5-10 million over the same time period is for NO(X) controls on the steam boilers at Big Cajun I. Approximately \$4-5 million will be spent over the next two years to reduce particulate matter emissions during start-up of the Big Cajun II boilers and \$3-5 million for expanding the existing bottom ash pond at the Big Cajun II plant site.

NORTH CENTRAL REGION

No capital expenditures related to environmental liabilities have been budgeted at this time.

LEGAL ISSUES

New York Environmental Litigation

In January 2002 the New York Attorney General and the New York Department of Environmental Control filed suit in the western district of New York against NRG Energy and Niagara Mohawk Power Corporation, the prior owner of the Huntley and Dunkirk facilities in New York. The lawsuit relates to

85

physical changes made at those facilities prior to NRG Energy's assumption of ownership. The complaint alleges that these changes represent major modifications undertaken without the required permits having been obtained. Although NRG Energy has a right to indemnification by the previous owner for fines, penalties, assessments and related losses resulting from the previous owner's failure to comply with environmental laws and regulations, NRG Energy could be enjoined from operating the facilities if the facilities are found not to comply with applicable permit requirements.

In July 2001, Niagara Mohawk Power Corporation filed a declaratory judgment action in the Supreme Court for the State of New York, County of Onondaga, against NRG Energy and its wholly-owned subsidiaries, Huntley Power LLC and Dunkirk Power LLC. Niagara Mohawk Power Corporation requests a declaration by the Court that, pursuant to the terms of the Assets Sales Agreement under which NRG Energy purchased the Huntley and Dunkirk generating facilities from Niagara

Edgar Filing: NRG ENERGY INC - Form 10-K405

Mohawk (the ASA), defendants have assumed liability for any costs for the installation of emissions controls or other modifications to or related to the Huntley or Dunkirk plants imposed as a result of violations or alleged violations of environmental law. Niagara Mohawk Power Corporation also requests a declaration by the Court that, pursuant to the ASA, defendants have assumed all liabilities, including liabilities for natural resource damages, arising from emissions or releases of pollutants from the Huntley and Dunkirk plants, without regard to whether such emissions or releases occurred before, on or after the closing date for the purchase of the Huntley and Dunkirk plants. NRG Energy has counterclaimed against Niagara Mohawk Power Corporation, and the parties have exchanged discovery requests.

California Litigation

NRG Energy and other power generators and power traders have been named as defendants in certain private plaintiff class actions filed in the Superior Court of the State of California for the County of San Diego in San Diego, California in November 2000 (Pamela R. Gordon v. Reliant Energy, Inc., et al. and Ruth Hendricks v. Dynegy Power Marketing Inc., et al). NRG Energy has also been named in another suit filed in January 2001 in San Diego County and brought by three California water districts, as consumers of electricity (Sweetwater Authority v. Dynegy, Inc., et al.), and in two suits filed in San Francisco County, one brought by the San Francisco City Attorney on behalf of the people of the State of California (The People of the State of California v. Dynegy Power Marketing, Inc., et al.) and one brought by Pier 23 Restaurant as a class action (Pier 23 Restaurant v. PG&E Energy Trading, et al.). Certain NRG Energy affiliates in NRG Energy's West Coast power partnership with Dynegy (Cabrillo I and II, Long Beach Generation and El Segundo Power) have been named as defendants in a state court action in Los Angeles County (Bustamonte v. Dynegy, Inc., et al.).

Although the complaints contain a number of allegations, the basic claim is that, by underbidding forward contracts and exporting electricity to surrounding markets, the defendants, acting in collusion, were able to drive up wholesale prices on the Real Time and Replacement Reserve markets, through the Western Coordinating Council and otherwise. The complaints allege that the conduct violated California antitrust and unfair competition laws. NRG Energy does not believe that it has engaged in any illegal activities, and intends to vigorously defend these lawsuits. These six civil actions brought against NRG Energy and other power generators and power traders in California have been consolidated and assigned to the presiding judge of the San Diego County Superior Court, and a pretrial conference has been scheduled for March 2002. While these cases are in too preliminary a stage to speculate on their outcome, if they were ultimately resolved adversely to the defendants it could have a material adverse effect on NRG Energy's results of operations and financial condition.

Shareholder Litigation

On February 15, 2002, Xcel Energy announced its intention to commence an exchange offer to acquire all of the outstanding publicly held shares of NRG Energy. On the same day, eight separate civil actions were filed in the Court of Chancery of the State of Delaware in and for New Castle County by owners of NRG common stock, against Xcel Energy, NRG Energy, and NRG Energy's directors. The complaints contain a number of allegations, but the basic claim is that Xcel proposes to acquire the remaining ownership of NRG

for inadequate consideration and without full and complete disclosure of all material information, in breach of defendants' fiduciary duties. The complaints request the court to enjoin the proposed transaction and, in the event the exchange offer is consummated, to award damages to plaintiffs.

Edgar Filing: NRG ENERGY INC - Form 10-K405

NOTE 18 -- SEGMENT REPORTING

NRG Energy conducts its business within six segments: Independent Power Generation in North America, Independent Power Generation outside North America (Europe, Asia Pacific and Other Americas regions), Alternative Energy and Thermal projects. NRG Energy's Revenues from majority owned operations attributable to Europe and Asia Pacific primarily relate to operations in the United Kingdom and Australia, respectively. These segments are distinct components with separate operating results and management structures in place. The "Other" category includes operations that do not meet the threshold for separate disclosure and corporate charges (primarily interest expense) that have not been allocated to the operating segments.

All operating revenues are from external customers located in the United States except \$764.7 million and \$292 million of revenues in 2001 and 2000, respectively, which came from external customers outside of the United States. NRG Energy's equity in earnings of unconsolidated affiliates, primarily independent power projects, includes \$54.1 million in 2001, \$19.2 million in 2000 and \$38.6 million in 1999 from non-regulated projects located outside of the United States. NRG Energy's investments in affiliates outside of the United States were \$519 million in 2001, \$566 million in 2000 and \$606 million in 1999. In addition, NRG Energy's majority owned foreign assets of \$2.8 billion in 2001 and \$796 million in 2000, contributed earnings of \$49.2 million in 2001, \$30.1 million in 2000 and \$0 in 1999.

Total assets as of December 31, 1999, for North America, Europe, Asia Pacific and Other Americas total \$2.8 billion, \$179 million, \$346 million and \$117 million, respectively.

NOTE 19 -- JOINTLY OWNED PLANTS

On March 31, 2000, NRG Energy acquired a 58% interest in the Big Cajun II, Unit 3 generation plant. Entergy Gulf States owns the remaining 42%. Big Cajun II, Unit 3 is operated and maintained by Louisiana Generating pursuant to a joint ownership participation and operating agreement. Under this agreement,

Louisiana Generating and Entergy Gulf States are each entitled to their ownership percentage of the hourly net electrical output of Big Cajun II, Unit 3. All fixed costs are shared in proportion to the ownership interests. Fixed costs include the cost of operating common facilities. All variable costs are incurred in proportion to the energy delivered to the owners. NRG Energy's income statement includes its share of all fixed and variable costs of operating the unit. NRG Energy's 58% share of the original cost included in Property, Plant and Equipment and construction in progress at December 31, 2001 and 2000, was \$179.6 million and \$179.1 million, respectively. The corresponding

Edgar Filing: NRG ENERGY INC - Form 10-K405

accumulated depreciation and amortization at December 31, 2001 and 2000, was \$7.8 million and \$3.4 million, respectively.

In August 2001, NRG Energy completed the acquisition of a 77% interest in the 520 MW gas fired electric generating facility located in McClain County, Oklahoma from Duke energy North America LLC (McClain generating facility). The remaining 23% of the McClain generating facility is owned and operated by the Oklahoma Municipal Power Authority (OMPA) pursuant to a joint ownership and operating agreement. Under this agreement, NRG McClain LLC operates the facility and NRG Energy and OMPA are entitled to their ownership ratio of the net available output of the McClain facility. All fixed costs are shared in proportion to the ownership interests. All variable costs are incurred in proportion to the energy delivered to the owners. NRG Energy's income statement includes its share of all fixed and variable costs of operating the facilities. NRG Energy's 77% share of the original cost included in Property, Plant and Equipment and construction in progress at December 31, 2001 was \$276.6 million. The corresponding accumulated depreciation and amortization at December 31, 2001, was \$3.1 million.

In June 2001, NRG Energy completed the acquisition of an approximately 3.7% interest in both the Keystone and Conemaugh coal-fired generating facilities. The Keystone and Conemaugh facilities are located near Pittsburgh, Pennsylvania and are jointly owned by a consortium of energy companies. NRG Energy purchase its interests from Conectiv, Inc. Keystone and Conemaugh are operated by GPU Generation, Inc. which sold its assets and operating responsibilities to Sithe Energies. Keystone and Conemaugh both consist of two operational coal-fired steam power units with a combined net output of 1,700 MW, four diesel units with a combined net output of 11 MW and an on-site landfill. The units are operated pursuant to a joint ownership participation and operating agreement. Under this agreement each joint owner is entitled to its ownership ratio of the net available output of the facility. All fixed costs are shared in proportion to the ownership interests. All variable costs are incurred in proportion to the energy delivered to the owners. NRG Energy's income statement includes its share of all fixed and variable costs of operating the facilities. NRG Energy's 3.70% and 3.72% share of the Keystone and Conemaugh facilities original cost included in Property, Plant and Equipment and construction in progress at December 31, 2001 was \$52.9 million and \$60.9 million, respectively. The corresponding accumulated depreciation and amortization at December 31, 2001, for Keystone and Conemaugh was \$1.3 million and \$1.5 million, respectively.

NOTE 20 -- DECOMMISSIONING FUNDS

NRG Energy is required by the State of Louisiana Department of Environmental Quality ("DEQ") to rehabilitate NRG Energy's Big Cajun II ash and wastewater impoundment areas, subsequent to the Big Cajun II facilities' removal from service. On July 1, 1989, a guarantor trust fund (the "Solid Waste Disposal Trust Fund") was established to accumulate the estimated funds necessary for such purpose. Approximately \$1.1 million was initially deposited in the Solid Waste Disposal Trust Fund in 1989, and \$116,000 has been funded annually thereafter, based upon an estimated future rehabilitation cost (in 1989 dollars) of approximately \$3.5 million and the remaining estimated useful life of the Big Cajun II facilities. Cumulative contributions to the Solid Waste Disposal Trust Fund and earnings on the investments therein are accrued as a decommissioning liability. At December 31, 2001 and 2000, the carrying value of the trust fund investments and the related accrued decommissioning liability was approximately \$4.3 million and \$3.9 million, respectively. The trust fund investments are comprised of various debt securities of the United States and are carried at amortized cost, which approximates their fair value.

Edgar Filing: NRG ENERGY INC - Form 10-K405

NOTE 21 -- ACCOUNTING FOR DERIVATIVE INSTRUMENTS AND HEDGING ACTIVITIES

DERIVATIVE INSTRUMENTS AND HEDGING ACTIVITY

On January 1, 2001, NRG Energy adopted Statement of Financial Accounting Standards No. 133, "Accounting for Derivative Instruments and Hedging Activities" (SFAS No. 133), as amended by SFAS No. 137 and SFAS No. 138. SFAS No. 133 requires NRG Energy to record all derivatives on the balance sheet at fair value. Changes in the fair value of non-hedge derivatives will be immediately recognized in earnings. Changes in fair values of derivatives accounted for as hedges will either be recognized in earnings as offsets to the changes in fair value of related hedged assets, liabilities and firm commitments or, for forecasted transactions, deferred and recorded as a component of other accumulated comprehensive income (OCI) until the hedged transactions occur and are recognized in earnings. The ineffective portion of a hedging derivative instrument's change in fair value will be immediately recognized in earnings. NRG Energy also formally assesses both at inception and at least quarterly thereafter, whether the derivatives that are used in hedging transactions are highly effective in offsetting the changes in either the fair value or cash flows of the hedged item. This assessment includes all components of each derivative's gain or loss unless otherwise noted. When it is determined that a derivative ceases to be a highly effective hedge, hedge accounting is discontinued.

SFAS No. 133 applies to NRG Energy's long-term power sales contracts, long-term gas purchase contracts and other energy related commodities financial instruments used to mitigate variability in earnings due to fluctuations in spot market prices, hedge fuel requirements at generation facilities and protect investments in fuel inventories. SFAS No. 133 also applies to various interest rate swaps used to mitigate the risks associated with movements in interest rates and foreign exchange contracts to reduce the effect of fluctuating foreign currencies on foreign denominated investments and other transactions. At December 31, 2001, NRG Energy had various commodity contracts extending through December 2003, and several fixed-price gas and electricity purchase contracts extending through 2018.

ACCUMULATED OTHER COMPREHENSIVE INCOME

The following table summarizes the effects of SFAS No. 133 on NRG Energy's Other Comprehensive Income balance as of December 31, 2001:

	ENERGY COMMODITIES	INTEREST RATE	FOREIGN CURRENCY	TOTAL
	-----	-----	-----	-----
	(GAINS/ (LOSSES) IN \$ THOUSANDS)			
OCI balance at December 31, 2000.....	\$ --	\$ --	\$ --	\$ --
Initial adoption of SFAS No. 133.....	(6,567)	(16,064)	--	(22,631)
Unwound from OCI during period:				
- due to unwinding of previously deferred amounts.....	(25,789)	662	(167)	(25,294)
Mark to market of hedge contracts.....	167,224	(46,002)	(2,196)	119,026
	-----	-----	-----	-----
OCI balance at December 31, 2001.....	134,868	(61,404)	(2,363)	71,101
	=====	=====	=====	=====
Gains/(Losses) expected to unwind from OCI during next 12 months.....	24,157	(7,636)	(2,196)	14,325

The adoption of SFAS No. 133 on January 1, 2001, resulted in an after-tax

Edgar Filing: NRG ENERGY INC - Form 10-K405

unrealized loss of \$22.6 million recorded to OCI related to previously deferred net losses on derivatives designated as cash flow hedges. During the year ended December 31, 2001, NRG Energy reclassified gains of \$25.3 million from OCI to current-period earnings. This amount is recorded on the same line in the statement of operations in which the hedged item is recorded. Also during the year ended December 31, 2001, NRG Energy recorded an after-tax gain in OCI of approximately \$119.0 million related to changes in the fair values of derivatives accounted for as hedges. The net balance in OCI relating to SFAS No. 133 as of December 31, 2001 was an unrecognized gain of approximately \$71.1 million. NRG Energy expects \$14.3 million of the deferred net gains on derivative instruments accumulated in OCI to be recognized as earnings during the next twelve months.

90

STATEMENT OF OPERATIONS

The following tables summarize the effects of SFAS No. 133 on NRG Energy's statement of operations for the period ended December 31, 2001:

	ENERGY COMMODITIES	FOREIGN CURRENCY	TOTAL
	-----	-----	-----
	(GAINS/(LOSSES) IN \$ THOUSANDS)		
Revenue from majority owned subsidiaries.....	\$(8,138)	\$ --	\$(8,138)

Other income.....	--	252	252
	-----	-----	-----
Total Statement of Operations impact before tax....	\$14,080	\$252	\$14,332
	=====	=====	=====

ENERGY RELATED COMMODITIES

NRG Energy is exposed to commodity price variability in electricity, emission allowances and natural gas, oil and coal used to meet fuel requirements. In order to manage these commodity price risks, NRG Energy enters into financial instruments, which may take the form of fixed price, floating price or indexed sales or purchases, and options, such as puts, calls, basis transactions and swaps. Certain of these transactions have been designated as cash flow hedges. NRG Energy has accounted for these derivatives by recording the effective portion of the cumulative gain or loss on the derivative instrument as a component of OCI in shareholders' equity. NRG Energy recognizes deferred gains and losses into earnings in the same period or periods during which the hedged transaction affects earnings. Such reclassifications are included on the same line of the statement of operations in which the hedged item is recorded.

No ineffectiveness was recognized on commodity cash flow hedges during the period ended December 31, 2001.

NRG Energy's pre-tax earnings for the year ended December 31, 2001 were increased by an unrealized gain of \$14.1 million associated with changes in the fair value of energy related derivative instruments not accounted for as hedges in accordance with SFAS No. 133.

During the year ended December 31, 2001, NRG Energy reclassified gains of

Edgar Filing: NRG ENERGY INC - Form 10-K405

\$25.8 million from OCI to current-period earnings and expects to reclassify an additional \$24.2 million of deferred gains to earnings during the next twelve months on energy related derivative instruments accounted for as hedges.

INTEREST RATES

To manage interest rate risk, NRG Energy has entered into interest-rate swaps that effectively fix the interest payments of certain floating rate debt instruments. Interest-rate swap agreements are accounted for as cash flow hedges. The effective portion of the cumulative gain or loss on the derivative instrument is reported as a component of OCI in shareholders' equity and recognized into earnings as the underlying interest expense is incurred. Such reclassifications are included on the same line of the statement of operations in which the hedged item is recorded.

No ineffectiveness was recognized on interest rate cash flow hedges during the period ended December 31, 2001.

During the year ended December 31, 2001, NRG Energy reclassified losses of \$0.7 million from OCI to current-period earnings and expects to reclassify \$7.6 million of deferred losses to earnings during the next twelve months on interest rate swaps accounted for as hedges.

FOREIGN CURRENCY EXCHANGE RATES

To preserve the U.S. dollar value of projected foreign currency cash flows, NRG Energy may hedge, or protect those cash flows if appropriate foreign hedging instruments are available.

91

No ineffectiveness was recognized on foreign currency cash flow hedges during the period ended December 31, 2001.

NRG Energy's pre-tax earnings for the year ended December 31, 2001 were increased by an unrealized gain of \$0.3 million associated with foreign currency hedging instruments not accounted for as hedges in accordance with SFAS No. 133.

During the year ended December 31, 2001, NRG Energy reclassified gains of \$0.2 million from OCI to current period earnings and expects to reclassify \$2.2 million of deferred losses to earnings during the next twelve months on foreign currency swaps accounted for as hedges.

NOTE 22 -- UNAUDITED QUARTERLY FINANCIAL DATA

Summarized quarterly unaudited financial data is as follows:

	QUARTER ENDED 2001				
	MAR 31	JUNE 30	SEPT 30	DEC 31	TOTAL
	(THOUSANDS OF DOLLARS, EXCEPT PER SHARE AMOUNTS)

Earnings per share:					
Basic.....	\$.06	\$.28	\$.49	\$.23	\$
Diluted.....	.06	.28	.49	.23	

(1) The sum of earnings per share for the four quarters may not equal earnings per share for the total year due to changes in the average number of common shares outstanding.

During the fourth quarter of the year ended December 31, 2001, NRG Energy recorded a \$24.5 million income tax benefit as a result of state income tax planning strategies and a higher percentage of NRG Energy's overall earnings derived from foreign projects in lower tax jurisdictions, than expected throughout the year. Also during the fourth quarter of 2001, NRG Energy recorded a net after-tax expense of \$6.7 million related to Enron's bankruptcy. This amount includes a \$14.2 million after-tax charge to establish bad debt reserves, which was partially offset by a \$7.5 million after-tax gain on a credit swap agreement entered into as part of NRG's credit risk management program.

NOTE 23 -- SUBSEQUENT EVENT

In February 2002, Xcel Energy announced its intention to commence an exchange offer by which Xcel Energy would acquire all of the outstanding publicly held shares of NRG Energy. In the announcement Xcel Energy stated its intention to close this transaction in April 2002 and stated that in the offer, NRG Energy shareholders would receive 0.4846 shares of Xcel Energy common stock in a tax-free exchange for each outstanding share of NRG Energy common stock.

92

None.

PART III

ITEM 10 -- DIRECTORS AND EXECUTIVE OFFICERS OF THE REGISTRANT

The name, age and title of each of the executive officers and directors of NRG Energy as of March 6, 2002 are as set forth below:

NAME ----	AGE ---	TITLE -----
David H. Peterson	60	Chairman of the Board, President, Chief Executive Officer and Director
James J. Bender	45	Senior Vice President and General Counsel
Brian B. Bird	39	Vice President and Treasurer
Leonard A. Bluhm	56	Executive Vice President and Chief Financial Officer
Jay M. Carpenter	40	Senior Vice President, NRG Energy, Inc. Managing Director and Chief Executive Officer, Asia Pacific
W. Mark Hart	51	Senior Vice President, NRG Energy, Inc. and President NRG Europe and Latin America
Roy R. Hewitt	56	Vice President, Administrative Services
Craig A. Mataczynski	41	Senior Vice President, NRG Energy, Inc. President and Chief Executive Officer, NRG North America
John A. Noer	55	Senior Vice President, NRG Energy Inc. and President, NRG Worldwide Operations
William T. Pieper	36	Vice President and Controller
Renee Sass	36	Vice President, Strategic Planning and Portfolio Assessment
Wayne H. Brunetti	59	Director, President and CEO Xcel Energy Inc.
Luella G. Goldberg	65	Director, Former Acting President and Chair of the Board of Trustees Wellesley College
Pierson M. Grieve	73	Director, Retired Chairman and CEO Ecolab, Inc.
William A. Hodder	70	Director, Retired Chairman and CEO Donaldson Company Inc.
James J. Howard	66	Director, Retired Chairman of the Board Xcel Energy, Inc.
Gary R. Johnson	55	Director, Vice President and General Counsel Xcel Energy Inc.
Richard C. Kelly	55	Director, President-Enterprises Xcel Energy Inc.
Edward J. McIntyre	51	Director, Vice President and CFO Xcel Energy Inc.

David H. Peterson has been Chairman of the Board of NRG Energy since January 1994, Chief Executive Officer since November 1993, President since 1989 and a Director since 1989. Mr. Peterson was also Chief Operating Officer of NRG Energy from June 1992 to November 1993. Prior to joining NRG Energy, Mr. Peterson was Vice President, Non-Regulated Generation for Northern States Power, and he has served in various other management positions with Northern States

Edgar Filing: NRG ENERGY INC - Form 10-K405

Power during the last 20 years.

James J. Bender has been Senior Vice President and General Counsel of NRG Energy since June 2000, prior to which he had been Vice President, General Counsel and Secretary of NRG Energy since June 1997. He served as the General Counsel of the Polymers Division of Allied Signal Inc. from May 1996 until June 1997. From June 1994 to May 1996, Mr. Bender was employed at NRG Energy, acting as Senior Counsel until December 1994 and as Assistant General Counsel and Corporate Secretary from December 1994 to May 1996.

Brian B. Bird has been Vice President and Treasurer of NRG Energy since June 1999 and Treasurer since June 1997, prior to which he was Director of Corporate Finance and Treasury for Deluxe Corporation in Shoreview, Minnesota from September 1994 to May 1997. Mr. Bird was Manager of Finance for the Minnesota Vikings professional football team from March 1993 to September 1994. Mr. Bird held several financial management positions with Northwest Airlines in Minneapolis, Minnesota from 1988 to March 1993.

94

Leonard A. Bluhm has been Executive Vice President and Chief Financial Officer of NRG Energy since January 1997. Immediately prior to that, he served as the first President and Chief Executive Officer of Cogeneration Corporation of America. Mr. Bluhm was Vice President, Finance of NRG Energy from January 1993 through April 1996. Mr. Bluhm was Chief Financial Officer of Cypress Energy Partners, a wholly-owned project subsidiary of NRG Energy, from April 1992 to January 1993, prior to which he was Director, International Operations and Manager, Acquisitions and Special Projects of NRG Energy from 1991. Mr. Bluhm previously served for 20 years in various financial positions with Northern States Power.

Jay M. Carpenter was appointed Senior Vice President, Asia Pacific of NRG Energy and Managing Director and CEO of NRG Asia Pacific on January 1, 2002, following the retirement of Keith G. Hilless. Prior to that he was Executive Director, Business Development of NRG Asia Pacific since February 1999. Before joining NRG Energy Mr. Carpenter was Director of Special Projects for Epic Energy Pty Ltd, a natural gas transmission company located in Australia. Mr. Carpenter has over 15 years of experience in the energy industry.

W. Mark Hart is Senior Vice President, Europe and Latin America of NRG Energy. Prior to joining NRG Energy, in March 2001, Mr. Hart was vice president of Canadian Operations at Newmont Mining Company and vice president of Business Processes and Operations for Europe, South America and Asia. Before that he managed mining operations, engineering and machinery with Cyprus Amax Minerals Company where he served as Senior Vice President of U.S. Operations and President and Chief Executive Officer of Australia. He has also worked for American Electric Power Fuel Supply, Standard Oil Company's minerals division and Consolidated Coal Company.

Roy R. Hewitt has been Vice President, Administrative Services at NRG Energy since February 1999. He has over 30 years experience in the power industry including 24 years with Northern States Power and eight years with NRG Energy. Mr. Hewitt joined NRG Energy in 1994 as a member of the senior management team with NRG's Gladstone Power Station project in Queensland, Australia. In 1996, he returned to NRG Energy's corporate headquarters as Executive Director, Human Resources. In 1997, Mr. Hewitt returned to Australia as Managing Director of the Gladstone Project and later served as Executive Director, Operations and Engineering for NRG Energy's Asia-Pacific region headquartered in Brisbane, Australia.

Craig A. Mataczynski has been Senior Vice President, North America of NRG

Edgar Filing: NRG ENERGY INC - Form 10-K405

Energy and President and Chief Executive Officer of NRG North America, since July 1998. From December 1994 until July 1998, Mr. Mataczynski served as Vice President, U.S. Business Development of NRG Energy. From May 1993 to January 1995, Mr. Mataczynski served as President of NEO Corporation, NRG Energy's wholly owned subsidiary that develops small electric generation projects within the United States. Prior to joining NRG Energy, Mr. Mataczynski worked for Northern States Power from 1982 to 1994 in various positions, including Director, Strategy and Business Development and Director, Power Supply Finance.

John A. Noer has been Senior Vice President of NRG Energy and President of NRG Worldwide Operations since January 1, 2000. Immediately prior to that he served as President-NSP Combustion and Hydro Generation for Northern States Power Company and as a director of NRG Energy since June 1997. Mr. Noer was President and CEO of Northern States Power Wisconsin, a wholly owned subsidiary of Northern States Power, since January 1993. Prior to joining Northern States Power Wisconsin, Mr. Noer was President of Cypress Energy Partners, a project subsidiary of NRG Energy, from March 1992 to January 1993. Prior to joining Cypress Energy Partners, Mr. Noer held various management positions with Northern States Power since joining the company in September 1968.

William T. Pieper has been Vice President and Controller of NRG Energy since June 2001. He has also held the positions of Controller, Assistant Controller and Manager of International Accounting since joining NRG Energy in March 1995. Prior to joining NRG Energy, Mr. Pieper practiced as a Certified Public Accountant for six years with the firm of KPMG.

Renee J. Sass has been Vice President, Strategic Planning and Portfolio Assessment since June 2001, prior to which she was Executive Director, Finance and Assistant Treasurer. Mrs. Sass has been with NRG

95

Energy since 1991 holding a number of finance and business development positions. From 1988 to 1991, Ms. Sass was with Ernst & Young's Utility Consulting Group in Washington D.C.

Wayne H. Brunetti has been President and CEO of Xcel Energy Inc. since August 2000. Prior to assuming his current position in August 2000, Mr. Brunetti was Vice Chairman, President and Chief Executive Officer of NCE. Mr. Brunetti was Vice Chairman, President and Chief Operating Officer of Public Service Company of Colorado before it merged with Southwestern Public Service Company to form NCE. Mr. Brunetti joined Public Service Company of Colorado as president and chief operating officer in 1994. Mr. Brunetti has been a Director of NRG Energy since August 2000.

Luella G. Goldberg is a member of the boards of directors of TCF Financial, Hormel Foods Corporation, the ING Group, Communications Systems, Inc., and the University of Minnesota Carlson School of Management (Board of Overseers). From 1985 to 1993, Ms. Goldberg served as chair of the Wellesley College Board of Trustees. She served as acting president of the college from July 1993 to October 1993 and is now a Trustee Emerita. Ms. Goldberg is also a Trustee of the University of Minnesota Foundation, and served as a chair for the Foundation's Board of Trustees from 1996 to 1998. Ms. Goldberg has been a Director of NRG Energy since June 2000.

Pierson M. (Sandy) Grieve is a member of the boards of directors of The St. Paul Companies, Inc., Mesaba Aviation and Bank of Naples. Mr. Grieve is a partner at Palladium Equity Partners, New York, New York. Mr. Grieve served as chairman and CEO of Ecolab, Inc. from 1983 to 1995 after moving to Minnesota from his position as President and CEO of Questor Corp., Toledo, Ohio. Mr. Grieve has been a Director of NRG Energy since June 2000.

Edgar Filing: NRG ENERGY INC - Form 10-K405

William A. Hodder is a member of the boards of directors of SUPERVALU, Inc. and the University of Minnesota Carlson School of Management (Board of Overseers). Mr. Hodder served as chairman and CEO of Donaldson Company, Inc. from 1994 to 1996 and Chairman, President and CEO from 1982 to 1994. Mr. Hodder joined Donaldson as President in 1973. Mr. Hodder has been a Director of NRG Energy since June 2000.

James J. Howard was Chairman of Xcel Energy from August 2000 until his retirement in August 2001. Mr. Howard served as Chairman, President and CEO of Northern States Power from 1994 until August 2000. Mr. Howard joined NSP as President and CEO in 1987. Before joining NSP, Mr. Howard was President and Chief Operating Officer of Ameritech. Mr. Howard is also Chairman of the Federal Reserve Bank of Minneapolis, a Director of Ecolab Inc., Honeywell International Inc. and Walgreen Co. Mr. Howard has been a Director of NRG Energy since June 2000.

Gary R. Johnson has been a Director of NRG Energy since 1993 and has been Vice President and General Counsel of Xcel Energy since August 2000. Mr. Johnson served as Vice President and General Counsel of Northern States Power from November 1991 to August 2000. Prior to November 1991, Mr. Johnson was Vice President-Law of Northern States Power from January 1989, acting Vice President from September 1988 and Director of Law from February 1987, and he has served in various management positions with Northern States Power during the last 20 years.

Richard C. Kelly has been a Director of NRG Energy since August 2000. Mr. Kelly is President -- Enterprises of Xcel Energy, and was formerly Executive Vice President, financial and support services, and Chief Financial Officer for NCE from 1997 to August 2000. Before that, Mr. Kelly was Senior Vice President of Finance, Treasurer and Chief Financial Officer for Public Service Company of Colorado, which he joined in 1968.

Edward J. McIntyre has been a Director of NRG Energy since 1993. Mr. McIntyre has been Vice President and Chief Financial Officer of Xcel Energy since August 2000, and prior to that was Vice President and Chief Financial Officer of Northern States Power from January 1993. Mr. McIntyre served as President and Chief Executive Officer of Northern States Power-Wisconsin, a wholly-owned subsidiary of Northern States Power, from July 1990 to December 1992, as Vice President Gas Utility from November 1985 to June 1990, and he has served in various other management positions since joining Northern States Power in 1973.

96

SECTION 16(A) BENEFICIAL OWNERSHIP REPORTING COMPLIANCE

Under federal securities laws, NRG Energy's directors and executive officers are required to report, within specified monthly and annual due dates, their initial ownership in NRG Energy's securities and subsequent acquisitions, dispositions or other transfers of interest in such securities. NRG Energy is required to disclose whether it has knowledge that any person required to file such a report may have failed to do so in a timely manner. To the knowledge of NRG Energy, all of its directors and officers subject to such reporting obligations have satisfied their reporting obligations in full for 2001.

ITEM 11 -- EXECUTIVE COMPENSATION

COMPENSATION COMMITTEE REPORT ON EXECUTIVE COMPENSATION

COMPENSATION PHILOSOPHY

Edgar Filing: NRG ENERGY INC - Form 10-K405

The Compensation Committee of the Board of Directors (the "Committee") consists of four members, two of which are independent.

The purpose of the Committee is to, on a regular basis, review, approve, and where applicable, make recommendations to the Board of Directors concerning executive officer compensation. The Committee's philosophy regarding executive compensation is that such compensation should be directly aligned with improvements in corporate performance and increased shareholder value. The Committee's guidelines, which are intended to reflect such philosophy, include:

- Providing a competitive total compensation package that enables the Company to attract and retain key executive talent.
- Aligning compensation with the Company's annual and long-term business strategies and objectives.
- Providing variable compensation opportunities that are directly linked to the Company's performance and shareholder return.

For the fiscal year 2001, the Compensation Committee evaluated the competitiveness of its executive compensation based on information obtained by assessing data contained in the proxy statements of similar competitive power production companies. The competitive comparisons were made against a peer group of ten power generation companies. In determining the peer group, emphasis was placed on companies with non-regulated power generation operations that are reasonably similar in size to that of NRG. The Committee utilized such information to assess the Company's position in each individual aspect of executive compensation, including base salary, annual incentive compensation and long-term incentive compensation.

ELEMENTS OF COMPENSATION

Compensation for the Company's executive officers for the fiscal year 2001 consisted of the following elements: base salary, annual incentive compensation, and long-term incentive compensation.

Base Salary. Annual base salary is designed to compensate executive officers for their sustained performance. For the fiscal year 2001, annual base salaries for executive officers were established by reviewing base pay levels for each executive's position in the peer group proxy analysis. The base salary recommendations also incorporate the executive officer's individual performance, the general contributions of the executive officer to overall corporate performance, and the level of achievement by the executive officer in respect to specific annual goals. In general, the 2001 base salary levels for executive officers, including the Chief Executive Officer, Mr. Peterson, were increased in accordance with comparable market data. The base salary amounts paid to the executive officers for the fiscal year 2001 are reflected in the salary column of the Summary Compensation Table.

Annual Incentive Compensation. Annual incentive compensation is designed to compensate executive officers for satisfying certain Company goals and is determined as a percentage of each such executive officer's

annual base salary. Annual incentive compensation for the executive officers for the fiscal year 2001 was determined in accordance with median levels of annual incentive awards for comparable positions, as set forth in the peer group proxy analysis. For the fiscal year 2001, the target incentive for annual incentive compensation for executive officers ranged from 55% to 75% of base salary, with Mr. Peterson's target incentive being 75% of base salary. Annual incentive

Edgar Filing: NRG ENERGY INC - Form 10-K405

payout opportunities range from 0% to 200% of the target incentive. Target incentives for the executive officers for the fiscal year 2001, were based on some or all of the following factors: net income, business development and safety goals. Mr. Peterson's target incentive was based on 95% net income and 5% of safety goal. Overall the Company achieved the maximum net income and safety goal for 2001 with a net income growth of 45% from the fiscal year ending December 31, 2000. As such, Mr. Peterson received the maximum payout available for his annual incentive compensation. The annual incentive compensation paid to the executive officers for the fiscal year 2001, is reflected in the bonus column of the Summary Compensation Table.

Long-Term Incentive Compensation. Prior to the completion of the Company's initial public offering and the adoption of the NRG 2000 Long-Term Incentive Compensation Plan (the "2000 Plan"), each of which occurred in May 2000, the Company offered the NRG Equity Plan (the "Equity Plan") to its executive officers and other selected employees. The Equity Plan was established in 1993 to promote the achievement of long-term financial objectives by linking the long-term incentive compensation of the employees to the achievement of value creation, as well as to attract and retain employees of outstanding competence, encourage teamwork among employees and provide employees with an opportunity for long-term capital accumulation. Under the Equity Plan, the Company made grants of "equity units", which were intended to simulate stock options. Grants of equity units were made annually at the discretion of the Board of Directors with a grant price consistent with the most recent valuation of equity units.

In connection with the Company's initial public offering, the Company established the 2000 Plan, the principal components of which are non-qualified stock options. As such, the Company discontinued the Equity Plan. All outstanding, non-vested equity units for active employee participants were terminated and replaced with a comparable stock option grant.

Under the 2000 Plan the Incentive Plan Subcommittee will approve a target number of option shares for each executive officer, with such targets to be based in part on proxy information and a base salary multiple to determine the long-term incentive compensation. It is intended that NRG's CEO will make a recommendation to the Incentive Plan Subcommittee as to the number of options to be granted and the Incentive Plan Subcommittee will be responsible for reviewing and approving all such recommendations and stock option grants to executive officers. Options granted will have an exercise price equal to the fair market value of the common stock of the Company on the date of grant, and typically, will be exercisable over a four-year period in increments of 25% per year. Initial grants may include a one-year waiting period prior to the vesting of such options.

DISCUSSION OF COMPENSATION IN EXCESS OF \$1 MILLION PER YEAR

The Company has considered the implications of Section 162(m) of the Internal Revenue Code of 1986, as amended (the "Code"), enacted under the Revenue Reconciliation Act of 1993, which precludes a public corporation from taking tax deduction for individual compensation in excess of \$1 million for its Chief Executive Officer or any of its four other highest-paid officers. Additionally, the Company has considered the exemptions to such limitation, specifically for compensation that is performance based within the meaning of such Section, which are also provided in Section 162(m).

In order to qualify compensation derived by executive officers from stock options as performance-based compensation, as contemplated by the Internal Revenue Service, the NRG Energy, Inc. 2000 Long-Term Incentive Compensation Plan was approved by the Board of Directors and the shareholders of the Company. Additionally, in order to qualify bonus payments to executives under Section 162(m) and preserve the deductibility of such payments, the Annual Incentive Plan for Designated Officers has been approved by the Committee, the Board, and

Edgar Filing: NRG ENERGY INC - Form 10-K405

the shareholders of the Company.

98

Regardless, in the future, the Company may award compensation to its executive officers that may not qualify under Section 162(m) as deductible compensation. The Company will continue to consider all elements of expense in providing such compensation, including the impact of Section 162(m).

Chair	Member	Member	Member
Pierson M. Grieve	James J. Howard	William A. Hodder	Richard C. Kelly

DIRECTOR COMPENSATION

NRG Energy does not award directors who are also employees of NRG Energy or employees of Xcel Energy any separate compensation or other consideration, direct or indirect, for service as a director. During 2001, directors not employed by NRG Energy or Xcel Energy ("Non-Employee Directors") received annual fees of \$35,000 plus \$1,000 for each Board of Directors meeting attended in person, \$800 for each committee meeting attended in person and reasonable travel expenses. Committee chairs received an additional \$200 per meeting attended in person. Non-Employee Directors participating in meetings of the Board of Directors or a committee by telephone received 50% of such meeting fees.

In connection with NRG Energy's initial public offering, each of the Non-Employee Directors received a grant of stock options to purchase 5,000 shares of Common Stock pursuant to the 2000 Plan at an exercise price equal to \$15, the initial public offering price of a share of Common Stock. Such options vest in four equal annual installments, beginning on the second anniversary of the date of each such grant. NRG Energy also granted stock options to each of the Non-Employee Directors in June 2001 for the purchase of 5,000 shares of Common Stock at an exercise price equal to the fair market value of the Common Stock on the date of such grant, pursuant to the 2000 Plan.

Each of the Non-Employee Directors participates in NRG Energy's Independent Director Deferral Plan (the "Deferral Plan"). The Deferral Plan allows Non-Employee Directors to defer all or a portion of his or her annual fees, meeting fees and other fees paid in connection with service on the Board of Directors to a cash deferral account, a stock unit account or a combination of such accounts. The Deferral Plan provides for a 20% premium on fees deferred into a stock unit account. Fees deferred under the Deferral Plan are paid out in cash upon the retirement of the Non-Employee Director from service on the Company's Board of Directors or upon two payout commencement dates other than retirement, as determined by the Non-Employee Director. Payout of fees deferred under the Deferral Plan are made in installments, with a minimum of two and maximum of ten such installments, or in a lump sum.

Each of NRG Energy's directors has an indemnification agreement that entitles him or her to indemnification for claims asserted against them in their capacity as directors to the fullest extent NRG Energy's permitted by Delaware law.

99

TOTAL STOCKHOLDER RETURN COMPARISON

The graph below compares the NRG Energy's cumulative total stockholder

Edgar Filing: NRG ENERGY INC - Form 10-K405

return on Common Stock with the cumulative total return of the Standard & Poor's 500 Composite Stock Price Index and an index of comparable peer issuers (the "Peer Group Index") from May 31, 2000, the first date on which the Common Stock began trading on the New York Stock Exchange, to December 31, 2001, NRG Energy's fiscal year end (assuming a \$100 investment in each vehicle on May 31, 2000 and the reinvestment of all dividends).

The Peer Group Index consists of the following publicly traded companies in the global power generation industry: AES Corp., Calpine Corp., Dynegy, Inc. and Mirant Corp. The former Peer Group consisted of the following publicly traded companies in the global power generation industry: AES Corp., Calpine Corp., Dynegy, Inc., Orion Power Holdings, Inc. and Mirant Corp. The former Peer Group differs from the current Peer Group because Orion Power Holdings, Inc. is no longer publically traded. In accordance with the rules of the SEC, the returns are indexed to a value of \$100 at May 31, 2000, and the returns of each company in the Peer Group Index have been weighted according to their market capitalization at December 31, 2000.

(1) Amounts shown represent stock options granted to the Named Executive

Edgar Filing: NRG ENERGY INC - Form 10-K405

Officers for compensation purposes in 2001 under the NRG Energy, Inc. 2000 Long-Term Incentive Compensation Plan and do not include options held by the Named Executive Officers to purchase shares of stock of Xcel Energy or stock options granted to the Named Executive Officers to replace equity units held under the NRG Equity Plan, which is described below in the Compensation Committee Report on Executive Compensation. The options set forth in the table above were granted with an exercise price equal to the Fair Market Value Closing Price of a share of NRG Energy common stock on the day of the grant and will vest and become fully exercisable on the fourth anniversary of the date of the grant. All options expire 10 years from the date of the grant.

- (2) The hypothetical potential appreciation shown in columns (f) and (g) for the Named Executive Officers is required by the SEC rules. The amounts in these columns do not represent either the historical or anticipated future performance of the Company's Common Stock level of appreciation.

102

The following table indicates for each of the Named Executive Officers the number and value of all exercisable and unexercisable options and SARs held by the Named Executive Officers as of December 31, 2001.

Edgar Filing: NRG ENERGY INC - Form 10-K405

PENSION PLAN TABLES

NRG Energy participates in Xcel Energy's noncontributory, defined benefit pension plan. Such plan covers substantially all of NRG Energy's employees. As of January 1, 1999, the pension benefit formula that applies to the Named Executive Officers was changed and each Named Executive Officer, together with all other affected nonbargaining employees, was given an opportunity to choose between two retirement programs, the traditional program and the pension equity program. Messrs. Peterson, Bluhm and Noer have selected the traditional program and Messrs. Mataczynski and Bender have selected the pension equity program.

Under the traditional program applicable to certain of the Named Executive Officers, the pension benefit is computed by taking the highest average compensation below the integration level times 1.1333% plus the highest average compensation above the integration level times 1.6333%. The result is multiplied by credited service. The integration level is one-third of the social security wage base. The annual compensation used to calculate average compensation is base salary for the year. After an employee has reached 30 years of service, no additional years of service are used in determining the pension benefit under the traditional program. The benefit amounts under the traditional program are computed in the form of a straight-life annuity.

Under the pension equity program applicable to certain of the Named Executive Officers, the formula for determining the pension benefit is average compensation times credited years of service times 10%. The annual compensation used to calculate average compensation is base salary for the year plus bonus compensation paid in that same year. There is no maximum on the number of years of service used to determine the pension benefit. The benefit amounts under the pension equity program are computed in the form of a lump sum.

Both programs feature a retirement spending account, which credits \$1,400 plus interest annually. The opening balance as of January 1, 1999 was \$1,400, multiplied by years of service.

The employment agreement between Mr. Peterson and NRG Energy provides that Mr. Peterson will receive the accumulated value of his pension payments had he begun payments at his earliest retirement eligibility. Additionally, the employment agreement provides that, in the event that Mr. Peterson elects a lump sum payment, the value of his benefits will be calculated based on both his and his spouse's mortality, subject to certain financial performance measures. Such calculation of benefits is different from the single mortality basis used for other employees.

104

The following table illustrates the approximate retirement benefits payable to employees retiring at the normal retirement age of 65 years under the traditional program applicable to certain of the Named Executive Officers:

AVERAGE COMPENSATION (LAST 4 YEARS)	ESTIMATED ANNUAL BENEFITS FOR YEARS OF SERVICE IND YEARS OF SERVICE				
	5	10	15	20	25

EMPLOYMENT AGREEMENTS

DAVID H. PETERSON EMPLOYMENT AGREEMENT

NRG Energy has entered into an employment agreement with Mr. Peterson which provides that Mr. Peterson will be employed as NRG Energy's highest level executive officer. The term of the agreement expires June 27, 2004. During the term of the agreement, Mr. Peterson's base salary will be reviewed at least annually by the Compensation Committee of the Board of Directors for possible increase. The agreement provides that Mr. Peterson will receive retirement and welfare benefits no less favorable than those provided to any other officer of NRG Energy. In addition, the agreement provides for participation in a supplemental executive retirement plan such that the aggregate value of the retirement benefits that Mr. Peterson and his spouse will receive at the end of the term of the agreement under all of NRG Energy's defined benefit pension plans and those of NRG Energy's affiliates will not be less than the aggregate value of the benefits he would

106

have received had he continued, through the end of the term of the agreement, to participate in the NSP Deferred Compensation Plan, the NSP Excess Benefit Plan and the NSP Pension Plan. Such retirement benefits include amounts to compensate Mr. Peterson for the monthly defined benefit payments he would have received during the term of the agreement and prior to the date of his termination of employment if monthly benefit payments had commenced following the month in which he first became eligible for early retirement under the Xcel Energy Pension Plan.

The agreement also provides for certain additional benefits to be paid upon Mr. Peterson's death. If Mr. Peterson's employment is terminated by NRG Energy without cause, or by Mr. Peterson with good reason, in each case as defined in the agreement, Mr. Peterson will continue to receive his salary, bonus at the greater of target bonus or actual bonus for the last plan year prior to termination, incentive compensation with cash replacing equity based awards and benefits under the agreement as if he had remained employed until the end of the term of the agreement and then retired, at which time he will be treated as eligible for retiree welfare benefits and other benefits provided to the retired senior executives. However, if the termination of employment is a result of a change of control, as defined in the Equity Plan, the compensation and benefits will be continued for the longer of 30 months or through the end of the employment period.

Edgar Filing: NRG ENERGY INC - Form 10-K405

In accordance with the terms of the agreement, Mr. Peterson has agreed not to compete with the business of NRG Energy during the period of his employment and for one year after his termination or resignation. Mr. Peterson has also agreed not to solicit any of NRG Energy's customers for any business purpose that competes with NRG Energy's business during the period of his employment or two years after his termination or resignation. Finally, during the period of his employment and for two years after his termination or resignation, Mr. Peterson has agreed not to disclose any of NRG Energy's confidential information to any person not authorized by NRG Energy to receive such confidential information.

JAMES J. BENDER, LEONARD A. BLUHM, CRAIG A. MATA CZYNSKI AND JOHN A. NOER
SEVERANCE AGREEMENTS

Messrs. Bender, Bluhm, Mataczynski and Noer are participants in the Company's Executive officer and Key Personnel Severance Plan (the "Plan"). In June and July 2001, the Company executed severance plan agreements with Messrs. Bender, Bluhm, Mataczynski and Noer pursuant to the Plan. Each such agreement remains in effect until the third anniversary of its effective date. Each agreement has an effective date of May 31, 2001, except for the Company's agreement with Mr. Noer, which has an effective date of January 15, 2001. The severance agreements provide that if the employment of Messrs. Bender, Bluhm, Mataczynski, or Noer is terminated due to his death or disability, he will receive his base salary and accrued vacation through the date of termination or resignation. Each such agreement further provides that if any of Messrs. Bender, Bluhm, Mataczynski or Noer is terminated for cause, or if any of them voluntarily resigns without good cause, he will receive his base salary and accrued vacation through the date of termination or resignation, plus all other amounts to which he is entitled under any compensation plans of the Company, at the time such payments are due.

Each such agreement further provides for the payment of severance benefits in the event that any of Messrs. Bender, Bluhm, Mataczynski or Noer is terminated by the Company without cause, or if any of them terminates his employment within three months of a material change or reduction in his job responsibilities with the Company or as a result of a material breach by the Company of the compensation or benefit terms of the severance agreement. The severance benefits payable include the payment of two times the participant's base salary, plus two times the participant's average annual bonus earned over the two full years prior to the date of termination, or two times the participant's target annual bonus established for the bonus plan year in which the participant's termination occurs, whichever is greater.

Severance benefits are also payable to each of Messrs. Bender, Bluhm, Mataczynski and Noer if, within six months prior to, or twelve months after, the effective date of a Change in Control (as defined in the Company's Severance Plan) of the Company, his employment with the Company ends as a result of either an involuntary termination of his employment by the Company for reasons other than cause, or by voluntary termination by him for cause. Whether or not a particular transaction constitutes a change of control is to be determined by the Board of Directors of the Company. In the event of a Change in Control of the Company,

107

the severance benefits payable include the payment of three times the participant's base salary, plus three times the participant's average annual bonus earned over the two full years prior to the date of termination, or three times the participant's target annual bonus established for the bonus plan year in which the participant's termination occurs, whichever is greater.

Edgar Filing: NRG ENERGY INC - Form 10-K405

Under the terms of each such agreement, each of Messrs. Bender, Bluhm, Mataczynski and Noer has agreed not to compete with the Company's business during the course of his employment and for one year after his resignation or termination, unless there has been a Change of Control of the Company. Additionally, Messrs. Bender, Bluhm, Mataczynski and Noer have agreed not to disclose any of the Company's confidential and proprietary information. This description of the Plan is qualified in its entirety by reference to the form of the Plan, which is filed as Exhibit 10.41.

ITEM 12 -- SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT

BENEFICIAL OWNERSHIP OF SHARES OF COMMON STOCK AND CLASS A COMMON STOCK

The following table lists the beneficial ownership of Common Stock and Class A Common Stock owned as of March 6, 2002, by (i) the directors and nominees of the Company, (ii) the executive officers named in the Summary Compensation Table that follows and (iii) all the directors and executive officers of the Company as a group. The following table also lists the beneficial ownership of Common Stock and Class A Common Stock owned as of March 6, 2002 by each person known by the Company to beneficially own more than five percent (5%) of the outstanding shares of Common Stock and Class A Common Stock.

NAME OF BENEFICIAL OWNER -----	CLASS OF STOCK -----	NUMBER OF SHARES BENEFICIALLY OWNED(1) -----	PERCENT O -----
David H. Peterson.....	Common Stock	314,415 (2)	
Pierson M. Grieve.....	Common Stock	55,000	
Luella G. Goldberg.....	Common Stock	10,000	
William A. Hodder.....	Common Stock	25,000

Craig A. Mataczynski.....	Common Stock	46,294 (3)	
John A. Noer.....	Common Stock	600	
James J. Bender.....	Common Stock	55,028 (4)	
Leonard A. Bluhm.....	Common Stock	93,365 (5)	
Xcel Energy Inc. (6).....	Common Stock	-- (7)	
	Class A Common Stock	147,604,500	10
Massachusetts Financial Services Company (9)	Common Stock	2,885,772 (10)	5.
Capital Group International, Inc. (14) and Capital Guardian Trust.....	Common Stock	8,139,810 (13)	16.
Directors and executive officers as a group.....	Common Stock	671,598 (11)	

(1) The number of shares beneficially owned by each person or entity is determined under the rules of the Securities and Exchange Commission (the "SEC"), and the information is not necessarily indicative of beneficial ownership for any other purpose. Under such rules, each person or entity is considered the beneficial owner of any shares: (a) to which such person or entity has sole or shared voting power or investment power and (b) that such person or entity has the right to acquire within 60 days through the exercise of stock options or other similar rights. Unless otherwise indicated, each person or entity has sole investment and voting power (or

Edgar Filing: NRG ENERGY INC - Form 10-K405

such person shares such powers with his or her spouse) with respect to the shares set forth in the table above.

108

- (2) Includes 308,415 shares subject to options that are exercisable within 60 days.
- (3) Includes 44,294 shares subject to options that are exercisable within 60 days.
- (4) Includes 54,028 shares subject to options that are exercisable within 60 days, does not include 100 shares owned by Mr. Bender's wife. Mr. Bender disclaims beneficial ownership of the shares owned by his wife.
- (5) Includes 91,665 shares subject to options that are exercisable within 60 days.
- (6) The address for Xcel Energy Inc. is 800 Nicollet Mall, Suite 3000, Minneapolis, Minnesota, 55402-2023.
- (7) Pursuant to an option agreement, which is more fully described below under the heading "Relationships and Related Transactions," Xcel Energy and its affiliates have a continuing option to purchase shares of Common Stock to the extent necessary to maintain or restore an ownership percentage of 80% of the outstanding shares of Common Stock and Class A Common Stock on a combined basis.
- (8) Xcel Energy currently owns an approximate 74% interest in the Common Stock and Class A Common Stock of the Company on a combined basis, which represents 96.7% of the total voting power of the Common Stock and Class A Common Stock on a combined basis.
- (9) The address for Massachusetts Financial Services Company is 500 Boylston Street, Boston, Massachusetts, 02116.
- (10) Based on the Schedule 13G filed with the SEC on February 12, 2002.
- (11) Includes 568,005 shares subject to options that are exercisable within 60 days.
- (12) Does not include 1,500 shares owned by Mr. McIntyre's wife.
- (13) Based on Schedule 13G/A filed with the SEC on February 11, 2002.
- (14) The address of Capital Group International is 11100 Santa Monica Blvd., Los Angeles, CA 90025.

ITEM 13 -- CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS

RELATIONSHIPS AND RELATED TRANSACTIONS

NRG Energy was initially incorporated in Minnesota in 1989, and was reincorporated in Delaware in 1992, as a wholly owned subsidiary of NSP. The Company became publicly traded on May 31, 2000. In August 2000, NSP merged with NCE to form Xcel Energy. Following the completion in March 2001 of a public offering by NRG Energy of 18.4 million shares of Common Stock (the "March 2001 Offering"), Xcel Energy owns an approximate 74% interest in the Common Stock and Class A Common Stock of NRG Energy on a combined basis, representing 96.7% of the total voting power of the Common Stock and Class A Common Stock on a combined basis. In addition, 4 directors of NRG Energy are executive officers of

Edgar Filing: NRG ENERGY INC - Form 10-K405

Xcel Energy.

NRG Energy and Xcel Energy have entered into material transactions and agreements with one another and are expected to enter into material transactions and agreements from time to time in the future. Material agreements and transactions currently existing or currently proposed between NRG Energy and Xcel Energy are described below.

OPERATING AGREEMENTS

NRG Energy has two agreements with Xcel Energy for the purchase of thermal energy. Under the terms of the agreements, Xcel Energy charges NRG Energy for certain costs (fuel, labor, plant maintenance and auxiliary power) incurred by Xcel Energy to produce thermal energy. NRG Energy paid \$7.1 million in 2001 under these agreements. One of the agreements expires on December 31, 2002, and the other expires on December 31, 2006. NRG Energy and Xcel Energy have executed a new agreement, expiring on December 31, 2010, to replace the agreement that would have expired on December 31, 2002; this new agreement will not become effective until it is approved by the Minnesota Public Utilities Commission.

NRG Energy has a renewable 10-year agreement with Xcel Energy, expiring on December 31, 2006, under which Xcel Energy agrees to purchase refuse-derived fuel for use in certain of its boilers, and NRG Energy agrees to pay Xcel Energy a burn incentive. Under this agreement, NRG Energy received from Xcel Energy \$1.6 million in 2001, and NRG Energy paid to Xcel Energy \$2.8 million in 2001.

NRG Energy has entered into an operation and maintenance agreement with Xcel Energy with respect to its Elk River and Becker Facilities, under which NRG Energy receives a base management fee and is

109

reimbursed for costs it incurs. The operation and maintenance agreement also provides for a management incentive fee payable to NRG, based upon the financial performance of the facilities. NRG Energy earned a total management fee, in addition to reimbursed expenses, of \$1.9 million in 2001. This agreement expires on December 31, 2003.

NRG Energy and Xcel Energy have entered into an asset purchase agreement for the sale of Xcel Energy's Elk River and Becker Facilities to NRG Energy. The boards of directors of Xcel Energy and NRG have approved the transaction. The Minnesota Public Utilities Commission has approved Xcel Energy's request for the transfer of assets. Xcel Energy expects that the transaction will be completed by the second quarter of 2002.

REIMBURSEMENT FOR ADMINISTRATIVE SERVICES

NRG Energy reimburses Xcel Energy for certain overhead and administrative costs, including benefits administration, engineering support, accounting, and other shared services. Employees of NRG Energy participate in certain employee benefit plans of Xcel Energy. NRG Energy paid Xcel Energy \$12.2 million in 2001 as reimbursement for certain overhead costs and the cost of services provided.

TREecycle AGREEMENT

In February 2001, a wholly-owned subsidiary of NRG Energy, NRG Processing Solutions LLC (NRG PS), entered into agreements with Xcel Energy to provide for the assignment by Xcel Energy to NRG PS of various leases and contracts with respect to Xcel Energy's Treecycle business unit. The Treecycle operation manages wood waste from Xcel Energy's line-clearance operations in the Minneapolis and St. Paul metropolitan area. In conjunction with this transfer,

Edgar Filing: NRG ENERGY INC - Form 10-K405

NRG Energy and Xcel Energy have also entered into a one-year processing agreement whereby NRG PS agreed to process Xcel Energy's wood waste until December 31, 2001, for a minimum fee of \$500,000. Such agreements were approved by the Minnesota Public Utilities Commission in April 2001. The agreements were not renewed. During the year ended December 31, 2001, NRG Energy received the minimum fee of \$500,000 from Xcel Energy.

CONSULTING SERVICES AGREEMENT

NRG Energy has an agreement with Utility Engineering Corporation, a wholly owned subsidiary of Xcel Energy, under which Utility Engineering provides consulting services to NRG Energy. Consulting services are provided from time to time at NRG Energy's request. NRG Energy paid \$1.4 million to Utility Engineering for consulting services in 2001.

TAX ALLOCATION AGREEMENT

NRG Energy was formerly a member of Xcel Energy's consolidated tax group for United States federal income tax purposes. Following the completion of the March 2001 Offering, Xcel Energy owns equity securities representing less than 80% of NRG Energy's value and, accordingly, NRG Energy is no longer a member of Xcel Energy's consolidated tax group. The responsibility for payment of taxes and the allocation between Xcel Energy and NRG Energy of tax benefits and liabilities was previously governed by a tax sharing agreement between NRG Energy and Xcel Energy. Such tax sharing agreement was replaced by a tax allocation agreement, which became effective as of December 2000, that formalizes the various practices which arose under the previous tax sharing agreement and reflects the change in NRG Energy's status from a wholly-owned subsidiary of Xcel Energy to a majority-owned subsidiary.

OPTION AGREEMENT

NRG Energy has entered into an option agreement with Xcel Energy under which NRG Energy has granted to Xcel Energy and its affiliates a continuing option to purchase additional shares of Common Stock. In the event that NRG Energy issues equity securities, Xcel Energy and its affiliates may exercise options to purchase shares of Common Stock to the extent necessary to maintain or restore an ownership percentage of 80% of the outstanding shares of Common Stock and Class A Common Stock on a combined basis. Such

110

option agreement expires if and when Xcel Energy and its affiliates beneficially own less than 30% of the outstanding Common Stock and Class A Common Stock on a combined basis.

Following the March 2001 Offering, Xcel Energy's ownership in NRG Energy was reduced to approximately 74% of the outstanding shares of Common Stock and Class A Common Stock on a combined basis. Xcel Energy waived its rights under such option agreement in connection with the March 2001 offering. This option agreement would terminate upon completion of Xcel Energy's exchange offer for NRG Energy common stock.

REGISTRATION RIGHTS AGREEMENT

NRG Energy has entered into a registration rights agreement with Xcel Energy, under which NRG Energy has agreed to register the shares of Common Stock issuable upon conversion of shares of Class A Common Stock held by Xcel Energy and its affiliates under the following circumstances:

- Demand Rights. Upon the written request of Xcel Energy, NRG Energy will register shares of Common Stock held by Xcel Energy and its affiliates

Edgar Filing: NRG ENERGY INC - Form 10-K405

specified in its request for resale under an appropriate registration statement filed and declared effective by the SEC. Xcel Energy may make a demand so long as:

- it requests registration of shares with an anticipated aggregate offering price of at least \$20 million;
- it has made no more than four previous requests for the registration of common stock; and
- NRG Energy has not completed a registered offering of Common Stock within the 180 day period before Xcel Energy's request.
- Piggyback Rights. If at any time NRG Energy registers newly issued shares of Common Stock or registers outstanding shares of Common Stock for resale on behalf of any holder of Common Stock, Xcel Energy and its affiliates may elect to include in such registration any shares of Common Stock it holds. If the offering is an underwritten offering, the managing underwriter may exclude up to 75% of the shares of Xcel Energy and its affiliates if market factors dictate, but only if Xcel Energy and its affiliates is not exercising a demand right, described above, and only if all other shares being sold by other stockholders are excluded first.
- Termination. The registration rights agreement will terminate upon the earlier of seven years from the date of the agreement or the date on which all remaining shares of Common Stock held by Xcel Energy and its affiliates, or issuable to Xcel Energy and its affiliates upon conversion of Class A Common Stock, may be sold in any 90-day period in compliance with Rule 144 under the Securities Act. This registration rights agreement will terminate upon the completion of Xcel Energy's tender offer for the exchange of NRG Energy's common stock.
